SUBJECT: VITAL NATURE OF BOARD-CERTIFIED PHYSICIANS IN AEROSPACE MEDICINE - SOURCE: H201-A/21

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Educational Affairs

---

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and

3 WHEREAS, the Bureau on Federal Health Programs believes that the policy
4 remains relevant now, therefore be it

5 RESOLVED, that the Bureau on Federal Health Programs recommends the
6 following policy be REAFFIRMED AS AMENDED.

7 Policy Statement

8 The American Osteopathic Association recognizes the unique contributions and
9 advanced qualifications of Aerospace Medicine professionals; and **~~SUPPORTS~~**
10 **~~BOARD-CERTIFIED PHYSICIAN LED CARE~~** specifically opposes any and all
11 efforts to remove, reduce or replace Aerospace Medicine physician leadership in
12 civilian, corporate or government Aerospace Medicine programs and aircrew
13 healthcare support teams. The AOA will advocate against further Aerospace
14 medicine **NON-PHYSICIAN** ~~mid-level provider~~ scope of practice expansions. ~~that~~
15 ~~threaten the safety, health, and wellbeing of aircrew, patients, support personnel~~
16 ~~and the flying public~~.

SUBJECT: PHYSICIAN DESIGNATION~~,~~ **AND** TRUTH IN ADVERTISING ~~AND RESIDENCY/FELLOWSHIP TRAINING NON-PHYSICIAN POST-GRADUATE MEDICAL TRAINING~~ - SOURCE: H203-A/21

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Educational Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and

WHEREAS, the Bureau on Federal Health Programs believes that the policy remains relevant now, therefore be it

RESOLVED, that the Bureau on Federal Health Programs recommends the following policy be REAFFIRMED AS AMENDED.

Policy Statement

When the American Osteopathic Association (AOA) utilizes the term, “physician,” it is to mean, “DO or MD or a recognized international equivalent terminal degree in medicine,” and be used exclusively by graduates from educational programs provided by a college of osteopathic medicine or allopathic medicine accredited by the Commission on Osteopathic College Accreditation or the Liaison Committee on Medical Education leading to the DO or MD degree, or recognized international equivalent terminal degree in medicine. The AOA will work with ~~the American Medical Association (AMA), and other~~ relevant stakeholders to continue to advocate that the title of Physician Assistant (PA) be preserved, and that the proposed title change to “Physician Associate” be rejected, because the proposed use of “associate” is misleading and should be abandoned out of concern for the potential impact on patient care and safety.

2 WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and

3 WHEREAS, the Bureau on Federal Health Programs believes that the policy
4 remains relevant now, therefore be it

5 RESOLVED, that the Bureau on Federal Health Programs recommends that the
6 following policy be REAFFIRMED.

7 Policy Statement

8 The American Osteopathic Association (AOA) opposes cuts to graduate medical
9 education (GME) funding for physician training (DO and MD); supports the
10 distribution of federal funds for GME, prioritizing areas most in need for physician
11 training (DO and MD) programs based upon geography and specialty; advocates for
12 continued and expanded contribution by all payers for health care (including the
13 federal government, the states, and local and private sources) to fund both the
14 direct and indirect costs of GME; supports allowing health insurers who provide
15 financial support for expansion or continuation of existing GME programs to include
16 such sums as direct medical expenditures as part of the calculation of the Medical
17 Loss Ratio of their health plans.

SUBJECT: RECOMMENDING ANNUAL WELL-BEING REPORTING REQUIREMENTS FOR ACGME-ACCREDITED RESIDENCY PROGRAMS

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Mental Health Workgroup, appointed by Robert G.G. Piccinini, DO, AOA President, drafted this policy for submission to the House of Delegates; and

WHEREAS, physician well-being is essential to safe, high-quality patient care, professional sustainability, and the ethical practice of medicine; and

WHEREAS, residents and fellows experience disproportionately high rates of burnout, depression, anxiety, and psychological distress during graduate medical education, with well-documented consequences for patient safety, workforce retention, and long-term physician health; and

WHEREAS, the Accreditation Council for Graduate Medical Education (ACGME) has appropriately recognized the importance of physician well-being by incorporating expectations related to resident and faculty well-being within the Common Program Requirements; and

WHEREAS, current ACGME accreditation processes assess well-being primarily through indirect mechanisms such as periodic site visits, resident and faculty surveys, and program self-evaluation, rather than through a standardized, recurring submission focused specifically on well-being implementation and outcomes; and

WHEREAS, the Annual Program Evaluation (APE) requirement emphasizes internal review, discussion, and dissemination of program performance with faculty members, residents, and the Sponsoring Institution's Designated Institutional Official (DIO) and Graduate Medical Education Committee (GMEC), rather than routine submission of standardized documentation to the ACGME for external review; and

WHEREAS, the absence of a required, structured, annual well-being report may result in variable interpretation, inconsistent documentation, and uneven accountability across residency programs regarding compliance with well-being expectations; and

WHEREAS, transparent, standardized reporting has been shown in other areas of graduate medical education to promote accountability, continuous quality improvement, and institutional prioritization of critical domains; and

WHEREAS, osteopathic medicine has a longstanding commitment to holistic care, including the well-being of the physician as an integral component of the health care system; now, therefore be it

RESOLVED, that such an annual well-being report should include, at a minimum, documentation of:

- Programmatic and institutional well-being initiatives and resources;
- Mechanisms for resident and faculty access to confidential mental health care;
- Processes for monitoring workload, fatigue mitigation, and learning environment concerns;
- Methods for collecting, reviewing, and responding to resident and faculty well-being data; and
- Evidence of continuous quality improvement efforts related to well-being; and be it further

RESOLVED, that the American Osteopathic Association (AOA) encourages the Accreditation Council for Graduate Medical Education (ACGME) to design this reporting requirement in a manner that emphasizes formative improvement, transparency, and meaningful engagement rather than punitive enforcement; and be it further

RESOLVED, that the AOA ~~shall advocate for~~ **SUPPORTS** this policy through appropriate channels, including collaboration with the ACGME, communication with sponsoring institutions, and representation within national graduate medical education forums; and be it further

RESOLVED, that the AOA reaffirms its commitment to physician well-being as a core pillar of osteopathic medicine and graduate medical education.

SUBJECT: SUPPORT FOR ENSURING D.O. STUDENTS ACHIEVE A NATIONAL STANDARD IN OSTEOPATHIC CLINICAL SKILLS COMPETENCIES

SUBMITTED BY: Arizona Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, the osteopathic profession has the duty to self-regulate, which contributes to the ongoing protection and trust of the public; and

WHEREAS, the National Board of Osteopathic Medical Examiners Comprehensive Medical Licensing Examination for the USA (NBOME COMLEX-USA) serves as the only osteopathic medical licensure assessment accepted by all 50 states and many international jurisdictions; and

WHEREAS, clinical skills, including physical examination, gathering a patient history, and performance of osteopathic manipulative treatment (OMT) as well as communication skills, interpersonal skills, empathy, professionalism, compassion and respectfulness, are important for establishing a therapeutic relationship with patients and have direct impact on the quality of patient care, provision of equitable care, and improved patient outcomes1-6; and

WHEREAS, deficiencies in these skills lead to medical errors, delay of diagnosis and inappropriate treatment of patients, which further erodes the physician-patient relationship,7-11; and

WHEREAS, these skills can only be evaluated through direct observation 6,12-14 ; and

WHEREAS, the COVID-19 pandemic contributed to the opportunity to re-evaluate the role of national clinical skills assessments as part of the osteopathic medical licensure examination series, COMLEX-USA12-14; and

WHEREAS, the Special Commission on Osteopathic Medical Licensure Assessment convened in 2021-2023 and recommended the establishment of a “ COM-based COMLEX-USA national standardized assessment which includes an in-person, hands-on evaluation of fundamental osteopathic clinical skills including interpersonal and communications skills and OMT, with quality assurance”,15; and

WHEREAS, national medical clinical educator groups called for collaboration amongst educational institutions and licensing assessment organizations to support and require high quality clinical skill assessments; 12-15; and

WHEREAS, the NBOME has worked since 2021 to develop and pilot an assessment program to these ends, which is now known as the Core Competency Capstone for DOs (C3DO)16; and

WHEREAS, over 4000 students across seventeen Colleges of Osteopathic Medicine (COM) locations have participated in C3DO pilot testing, reducing cost and travel requirements for the continued assessment of these essential skills, two main drivers of student dissatisfaction with previous assessment models; and

WHEREAS, 89% of students participating in C3DO state that C3DO allowed them to demonstrate their osteopathic clinical skills, including history building; physical examination skills; communication, interpersonal skills and professionalism; clinical decision making; and the performance of osteopathic manipulative treatment; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports education and assessment programs that assure that all D.O. students demonstrate meeting a national standard for osteopathic clinical skills competencies prior to graduation.

SUBJECT: POSTDOCTORAL TRAINEE PAID LEAVE POLICY REFORM

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Accreditation Council for Graduate Medical Education (ACGME) Institutional Requirements, Section 4.8, require sponsoring institutions to provide residents and fellows with a minimum of six weeks of paid medical, parental, or caregiver leave, with continuation of salary and benefits during that period[1]; and

WHEREAS, this policy—while a significant step forward—falls short of the paid parental leave standards recommended by leading medical professional organizations, including the American Academy of Family Physicians (AAFP), the American Academy of Pediatrics (AAP), and multiple medical specialty boards[2,3,5]; and

WHEREAS, evidence demonstrates that parental leave does not compromise clinical performance or training, as residents who take leave perform comparably to their peers in evaluations, procedural volume, and examination outcomes[4]; and

WHEREAS, international comparisons show that Canadian medical residents are offered up to 35 weeks of leave[5], British medical residents up to 52 weeks[6], and Australian medical residents up to 16 weeks of paid leave and up to one year of unpaid leave[7]; and

WHEREAS, U.S. medical residents who took more than eight weeks of maternity leave were less likely to experience postpartum depression, more likely to feel supported by colleagues and program directors, and more likely to breastfeed for longer durations[8]; and

WHEREAS, maternal mental health and breastfeeding duration are positively correlated with the length of maternity leave, and extended maternity leave is associated with lower neonatal, perinatal, postnatal, and overall child mortality[9]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) encourages the Accreditation Council for Graduate Medical Education (ACGME) to consider a policy review of its Institutional Requirements, Section 4.8 (Paid Leave Policy), to grant residents and fellows **THE MAXIMUM** ~~up to eight weeks of~~ paid medical, parental, or caregiver leave **IN ACCORDANCE WITH INSTITUTIONAL POLICIES, EMPLOYMENT LAWS AND BOARD ELIGIBILITY REQUIREMENTS.**

Explanatory Statement:
Current ACGME policy states "Sponsoring Institutions must provide residents/fellows with a minimum of six weeks of approved medical, parental, and caregiver leave(s) of absence for qualifying reasons that are consistent with applicable laws at least once and at any time during an ACGME-accredited program, starting the day the resident/fellow is required to report. They must also provide residents/fellows with at least the equivalent of 100 percent of their salary for the first six weeks of the first approved medical, parental, or caregiver leave(s) of absence taken. Note that the requirement does not mandate vacation or sick days be used. It does, however, state that the minimum of six weeks of leave must be paid time off and that at least one week of paid time off must be reserved for use outside of these six weeks".

This resolution seeks to encourage the ACGME to consider a policy review to increase their paid leave policy from six weeks to eight weeks, understanding that this may impact residents and fellows in various ways including potential extensions of residencies at the discretion of specialty board requirements and program directors.

SUBJECT: PRESERVING ACCESS TO PROCEDURAL TRAINING

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Committee on Educational Affairs

WHEREAS, hands-on procedural training is a fundamental component of graduate medical education, essential to the development of clinical competence; and

WHEREAS, non-physician clinicians are increasingly utilized in various healthcare settings to perform procedures traditionally performed by physicians and physician trainees[1]; and

WHEREAS, physician-led procedural education is central to maintaining the highest standards of training, ensuring physician trainees acquire the full range of procedural skills under the guidance of experienced program faculty[2]; and

WHEREAS, access to adequate procedural training is essential to training future physicians who play a leading role in patient care and advancing patient safety; and

WHEREAS, the American College of Radiology passed a resolution in 2025 in support of physician-led procedural training in response to concern regarding a reduction in procedural opportunities for radiology trainees[3]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports that residency and fellowship programs preserve hands-on procedural training as a core component; and, be it further

~~RESOLVED, that the AOA opposes the displacement of postdoctoral trainees by non-physician clinicians in performing procedures to ensure that postdoctoral trainees maintain sufficient opportunities to develop procedural competence.~~

RESOLVED, THAT THE AOA SUPPORTS PRIORITIZING POSTDOCTORAL TRAINEES FOR PROCEDURAL TRAINING OPPORTUNITIES NECESSARY TO ACHIEVE PROCEDURAL COMPETENCE WHILE FOSTERING COLLABORATIVE PRACTICE WITH NON-PHYSICIAN CLINICIANS.

SUBJECT: PROMOTING GREATER EMPHASIS ON THE PHILOSOPHY, **HISTORY, AND SELF-DETERMINATION** OF OSTEOPATHIC PRINCIPLES AND PRACTICE

SUBMITTED BY: Montana Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, Andrew Taylor Still, DO, the founder of osteopathic medicine, established the profession with a philosophy rooted in aiding the body's ability to heal itself, emphasizing the interrelationship of structure and function, and the holistic care of the patient as a unit of body, mind, and spirit; and

WHEREAS, the Osteopathic profession has now further defined the Osteopathic approach to patient care by developing the Tenets of Osteopathic medicine; and

WHEREAS, Osteopathic Principles and Practice (OPP) encompasses a broader diagnostic and clinical reasoning framework than Osteopathic Manipulative Medicine (OMM) and Osteopathic Manipulative Treatment (OMT) alone, yet a majority of OPP education currently focuses on OMM/OMT due in part to the absence of a formal operational definition of OPP applicable across all specialties; and

WHEREAS, THE EDUCATIONAL COUNCIL ON OSTEOPATHIC PRINCIPLES (ECOP) CREATED AND MAINTAINS THE GLOSSARY OF OSTEOPATHIC TERMINOLOGY TO ENSURE AND MAINTAIN CONSISTENT LANGUAGE ACROSS THE OSTEOPATHIC PROFESSION; AND

WHEREAS, THE NATIONAL BOARD OF OSTEOPATHIC MEDICAL EXAMINERS (NBOME) HAS CREATED THE FUNDAMENTAL OSTEOPATHIC MEDICAL COMPETENCY DOMAINS 2026 TO ESTABLISH COMPETENCIES THAT INCLUDE INTEGRATED POINTS OF OSTEOPATHIC PHILOSOPHY, BUT CURRENTLY LACKS ASSOCIATED ASSESSABLE MILESTONES; AND

WHEREAS, THE HISTORY OF OSTEOPATHIC MEDICINE IS NOT EXPLICITLY INCLUDED AS A FUNDAMENTAL STANDALONE COMPETENCY WITHIN THESE FRAMEWORKS, AND DOING SO WOULD FOSTER A DEEP SENSE OF STEWARDSHIP AMONG MEDICAL STUDENTS REGARDING THE DISTINCTIVE NATURE OF THEIR TRAINING; AND

WHEREAS, NO SINGLE OSTEOPATHIC ORGANIZATION HAS ESTABLISHED DEFINITIVE MILESTONES OR COMPETENCIES EXPLICITLY MAPPING THE HISTORY OF OSTEOPATHIC MEDICINE TO PROFESSIONAL AUTONOMY; AND

WHEREAS, the AOA reaffirmed through resolution H-220-A/2019 its commitment to the inclusion of OPP in every osteopathic board certification examination regardless of specialty, stating, in part, that there are two pathways for board certification for all Osteopathic board specialties, both with OPP, and one of these with the additional pathway including OPP, as well as test items on OMM/OMT; and

WHEREAS, previous AOA resolutions, including H-426-A/2023, which acknowledges osteopathic medicine as high-value care meeting the values of the Triple Aim, H-208-A/2025, which promotes multi-specialty education and collaboration as part of high-value care and a long standing major component of the osteopathic approach to patient care, and H-209-A/2025, which supports integration of OPP into all foundational core competencies for undergraduate medical education in Colleges of Osteopathic Medicine, were, in part, attempts to define what is OPP beyond OMM/OMT; and

WHEREAS, the osteopathic profession has not yet established a formal operational definition of OPP as a diagnostic reasoning framework distinct from but inclusive of OMM/OMT, creating barriers to consistent curriculum development, faculty training, and student assessment across all levels of osteopathic education; and

WHEREAS, standardizing and simplifying OMM/OMT education could create opportunities to incorporate broader OPP education into osteopathic curricula at all levels; now, therefore, be it

RESOLVED, that the American Osteopathic Association (AOA) convene a workgroup including representatives from American Association of Colleges of Osteopathic Medicine (AACOM), Commission on Osteopathic College Accreditation (COCA), the National Board of Osteopathic Medical Examiners (NBOME), the American Academy of Osteopathy (AAO), American Osteopathic Board of Neuromusculoskeletal Medicine (AOBNMM), the American Osteopathic Society of Executive Directors (AOSED), the Osteopathic Recognition department of the American College of Graduate Medical Education (ACGME) to develop a formal operational definition of Osteopathic Principles and Practice as a diagnostic reasoning framework, distinct from but inclusive of OMM/OMT, with associated assessable milestones for use across all levels of osteopathic education; and report findings to the HOD no later than 2027; and be it further

RESOLVED, THAT THIS WORKGROUP EXPLICITLY INCORPORATE INTO THESE ASSESSABLE MILESTONES THE HISTORY OF OSTEOPATHY

AND AN UNDERSTANDING OF HEALTHCARE SYSTEMS AS THEY DIRECTLY CORRELATE TO THE HISTORICAL EXISTENCE, DISTINCTIVENESS, AND PROFESSIONAL AUTONOMY OF THE OSTEOPATHIC PROFESSION; AND BE IT FURTHER

RESOLVED, that upon receipt of the workgroup's findings, the AOA work with osteopathic and graduate medical education stakeholders, including AACOM, COCA, NBOME, AAO, AOBNMM, ACGME, Colleges of Osteopathic Medicine, osteopathic specialty colleges, AOSED and AOA-accredited CME sponsors, to implement the operational definition and assessable milestones across all levels of osteopathic education, including standardization and simplifying of OMM/OMT education to create expanded curricular space for the broader OPP framework.

SUBJECT: FEDERAL LOAN AVAILABILITY AND RECOGNITION FOR HEALTH PROFESSIONS

SUBMITTED BY: New York State Osteopathic Medical Society

REFERRED TO: Committee on Educational Affairs

WHEREAS, the House Education and Workforce Committee voted to approve its portion of the federal budget reconciliation bill. Without further correction, this legislation eliminates Grad PLUS Loans and caps federal student professional borrowing at $200,000[i] ; and

WHEREAS, a rulemaking panel of higher education stakeholders convened and negotiated to begin implementing the new law's sweeping changes, including the new lending limits. The panel ultimately "reached consensus" on which professional degree programs will be eligible for the higher lending amounts based on the definition of a professional degree established in federal regulations, which includes several examples of degree programs including Pharmacy (Pharm.D.), Dentistry (D.D.S. or D.M.D.), Veterinary Medicine (D.V.M.), Chiropractic (D.C. or D.C.M.), Law (L.L.B. or J.D.), Medicine (M.D.), Optometry (O.D.), Osteopathic Medicine (D.O.), Podiatry (D.P.M., D.P., or Pod.D.), and Theology (M.Div., or M.H.L.)[ii]; and;

WHEREAS, while current regulations include this list as examples of professional degrees, the panel would limit the definition of professional degree to just the degrees on the list'; and

WHEREAS, the U.S. Department of Education has moved forward with the proposal from the negotiated rulemaking consensus process that nursing, physician assistant, nurse practitioner, physical therapy, speech therapy, occupational therapy and audiology programs are now excluded from the definition of "professional degree" programs tied to federal graduate student loan limits of approximately $100,000 and must follow new borrowing limits; and

WHEREAS, for nursing, the entire four-year undergraduate program can range from $89,560-$211,390. Public schools cost a yearly average of $22,390 and private schools average between $27,770-$52,850 per year[iii]. Students pursuing master's degrees at public institutions can expect to pay an additional $9,340 per year while the average yearly cost of private schools ranges from $9,510-$21,440. Considering that nearly half (43 percent) of all graduate students attend school part-time, usually while working, this further limits the amount of federal loans they can receive[iv] ; and

WHEREAS, the cost for obtaining a doctorate in physical therapy (DPT), which is three years beyond college degree attainment, ranges from $43,644 to $235,082 with the average being $125,287[v]; and

WHEREAS, occupational therapists can pursue either a master's degree or doctorate as the entry-level degree to practice[vi]. The average total cost of occupational therapy programs can range from $65,000 to $200,000, with many OT schools being on the higher end, especially doctorate (OTD) programs; and[vii]

WHEREAS, the average cost across all Physician Assistant (PA) graduate degree programs (public and private) for a 27-month resident tuition for physician assistant/associate program in 2025 is $98,075 and for nonresident tuition is $107,288[viii]; and

WHEREAS, the average cost across for a Masters Degree in Speech and Language Pathology (SLP) graduate degree programs (public and private) for a 24 to 30-month program is $20,513/year ($41,026 to 51,283) with typical tuition for an in-state resident is 12,596/year and for nonresident tuition it is $29,931/year[ix] These expenses, along with undergraduate expenses, may exceed the $100,000 upper borrowing limit, especially if the student pursues a PhD; and

WHEREAS, audiology doctoral programs consist of 3-4 years of classroom and clinical training with the final stage of clinical training, commonly known as the externship, is a full-time position at a clinic for approximately one year. Many aspects of the externship vary, including setting, specialty, salary, and tuition costs. Students may be required to pay full tuition to their university, reduced tuition, or no tuition at all, and the position may be paid or unpaid. The average audiology program's total tuition cost is approximately $100,000[x]; and

WHEREAS, the proposed current definitions and loan limitations could severely discourage the pursuit of the aforementioned other health professions [xi] [xii] [xiii] [xiv] in a time of projected shortage; and

WHEREAS, osteopathic physicians work closely with these other medical professionals in the care of patients; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) **SUPPORT THE RECOGNITION OF OTHER MEMBERS OF THE PATIENT CARE TEAMS AS "PROFESSIONAL DEGREES," AS IT MAY EVOLVE TO INCLUDE** ~~work with other interested entities to advocate for the recognition of~~ **:** nursing, physical therapy, occupational therapy, speech pathology, audiology, nurse practitioner and physician assistants ~~as "professional degrees" under federal guidelines~~; and be it further

RESOLVED, that the AOA ~~work with other interested entities to advocate for~~ **SUPPORT** availability of appropriate loans for students pursuing these professions.

SUBJECT: ADVOCATE FOR IMPLEMENTATION OF SKIN TONE DIVERSITY IN OSTEOPATHIC MEDICAL ~~CURRICULA~~ **EDUCATION**

SUBMITTED BY: Maine Osteopathic Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, individuals with skin of color make up 40.9% of the United States population, a figure projected to increase to 59.5% by 2060[4]; and

WHEREAS, 12.4% of all diagnoses made by family physicians pertain to the evaluation of skin conditions[4]; and

WHEREAS, dermatologists correctly diagnosed 72.1% of cases in individuals with lighter skin, compared to only 52.8% in patients with skin of color, with significantly lower diagnostic confidence for those with darker skin presentations ($p \leq 0.001$)[8]; and

WHEREAS, Black Americans face lower survival rates than white Americans across most cancers - including a 22% lower survival rate for melanoma - a disparity that persists even at the same stage of diagnosis, highlighting systemic issues in early detection[13]; and

WHEREAS, inadequate education on disease manifestations in diverse skin tones hinders accurate diagnosis and exacerbates health disparities, with medical trainees at all levels reporting low confidence in identifying disease in patients with skin of color[2]; and

WHEREAS, in a review of skin condition images across two osteopathic and two allopathic medical schools, the average representation of individuals with darker skin tones was 21% at osteopathic schools and 14% at allopathic schools[10]; and

WHEREAS, an analysis of over 4,000 images from widely used medical textbooks revealed that 74.5% of the photographs depicted patients with light skin tones, while only 4.5% featured those with darker skin tones[9]; and

WHEREAS, a nationwide survey of dermatology residents demonstrated lower confidence across all measured categories when caring for patients with skin of color compared to patients with white skin, while residents in programs offering tailored education on skin of color reported significantly higher confidence[6]; and

WHEREAS, implementing dermatology curricula - including modules, interactive seminars, and diagnostic training - focused on skin-of-color education has been shown to significantly improve medical students' confidence, self-assessed competency, and

ability to mitigate skin tone performance bias in diagnosing dermatologic conditions[1,7,12]; and

WHEREAS, several allopathic medical schools have created online collections of dermatologic educational tools and reference materials, including eBooks, image banks, atlases, and research resources, to increase access to representative and inclusive dermatologic content for their students, including the Inclusive Skin Color Project developed by UCSF[14]; and

WHEREAS, the National Board of Osteopathic Medical Examiners (NBOME) has stated its commitment to "improving item content to reflect diversity in patient populations, including skin tone representation in… COMLEX-USA examinations," which requires medical students to distinguish between diagnoses across diverse racial and ethnic groups[3]; and

WHEREAS, the limited availability of dermatologic images representing a range of skin tones online reduces patients' ability to assess the need for clinical evaluation, contributing to delays in care and education, and underscoring the need for physicians to develop multicultural and dermatologic fluency[11]; now, therefore, be it

WHEREAS, on April 16, 2025, the Commission on Osteopathic College Accreditation (COCA) voted to suspend enforcement of its curriculum standards and elements related to diversity, equity, and inclusion (DEI), which includes diversity in dermatologic education[15,16]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) recognizes the importance of including a diverse range of skin tones, such as those represented on the Fitzpatrick skin type scale, in **OSTEOPATHIC EDUCATION** ~~predoctoral medical education~~; and be it further

RESOLVED**,** that the AOA ~~urges~~ **ENCOURAGES** the Bureau of Osteopathic Education to assess the level of integration and identify potential gaps in current predoctoral education,
including, but not limited to, the use of diverse dermatologic images, simulation models, case-based learning, and standardized patient experiences across Colleges of Osteopathic Medicine.~~; and be it further~~

~~RESOLVED, that if the Bureau of Osteopathic Education's assessment identifies gaps or deficiencies in the quality of dermatologic education within and across the Colleges of Osteopathic Medicine, then the Bureau may recommend further action to the AOA Board of Trustees to refine standards, policies, and procedures.~~

Explanatory Statement:
As the population of the United States continues to grow more diverse, medical education must evolve to reflect the needs of all patients. Currently, both allopathic and osteopathic medical curricula lack sufficient emphasis on how dermatologic conditions present across a range of skin tones. This educational gap contributes to disparities in diagnosis, treatment, and outcomes for patients with skin of color. Given the ethical obligation of

physicians to provide equitable, evidence-based care, the American OsteopathicAssociation (AOA) can use its Bureau of Osteopathic Education to create and implement the needed standards in medical education. Medical students must be equipped with the knowledge and tools necessary to recognize and treat dermatologic conditions in all patients, regardless of skin tone or background.

SUBJECT: SUPPORT OF THE STANDARDIZED USE OF NBOME COMAT CLINICAL SUBJECT EXAMINATIONS IN CLERKSHIPS TRAINING

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, the National Board of Osteopathic Medical Examiners (NBOME) creates standardized exams to ensure osteopathic medical students are qualified to provide safe and effective care through reliable and defensible national standardized assessments[1]; and,

WHEREAS**,** studies evaluating the relationship between Comprehensive Osteopathic Medical Achievement Tests (COMATs) exam scores and COMLEX-USA Level 2-CE scores have demonstrated a strong correlation between performance on these examinations across clinical subjects[2,3]; and,

WHEREAS**,** a survey conducted by Council of Osteopathic Student Government Presidents (COSGP), examining osteopathic medical school use of NBOME COMAT exams, indicated that implementation of NBOME developed clinical training examinations is not standardized across Colleges of Osteopathic Medicine (COMs), with greater than 30% of COMs not exclusively utilizing COMAT examinations,[4] despite strong correlational relationships to COMLEX Level-2-CE performance; and

WHEREAS**,** successful completion of COMLEX Level-2-CE is required for the conferral of the Doctor of Osteopathic Medicine (DO) degree from all accredited COMs and for matriculation into residency as a DO graduate[5]; and

WHEREAS, Osteopathic Medical Education has experienced a 64.19% growth in enrollment in the last ten years,[6] with over 39,000 students enrolled as of Fall 2024,[7] corresponding with an increasing number of new osteopathic medical schools; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) support national standardized examination of osteopathic medical students during their clinical years to ensure comparable clinical training standards and equitable access to training tools shown to correlate with COMLEX Level-2-CE performance; and, be it further

RESOLVED**,** that the AOA supports osteopathic distinction in osteopathic medical training during clinical clerkships ~~through~~ **BY SUPPORTING COCA TO** encourag**E**~~ing~~ the use of National Board of Osteopathic Medical Examiners (NBOME) Comprehensive Osteopathic Medical Achievement Tests (COMAT) clinical examinations for evaluation of clinical knowledge during training.

SUBJECT: EXPANSION OF CLINICAL TRAINING CAPACITY IN UNDERGRADUATE MEDICAL EDUCATION (UME) TO ADDRESS THE PHYSICIAN WORKFORCE SHORTAGE

SUBMITTED BY: Texas Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, the United States faces a significant and worsening physician shortage; and

WHEREAS, clinical training capacity in undergraduate medical education (UME), particularly hospital-based rotations, remains a critical bottleneck; and

WHEREAS, limited access to rotations—especially in pediatrics—impacts not only pediatric workforce development but also the viability of related training programs such as family medicine and emergency medicine, thereby affecting access to care for both children and adults; and

WHEREAS, hospitals often have the capacity to train additional medical students but face barriers including financial constraints, administrative burden, and lack of structured incentives; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) **SUPPORTS** ~~advocate for~~ the expansion of clinical training capacity in Undergraduate Medical Education (UME) through supportive state and federal policies, including financial incentives and infrastructure support for hospitals and health systems; and, be it further

RESOLVED, that the AOA encourage hospitals receiving public funding to participate in osteopathic medical student education in a manner commensurate with their clinical capacity and available resources; and, be it further

RESOLVED, that the AOA collaborate with national stakeholders, including American Association of Colleges of Osteopathic Medicine (AACOM), Association of American Medical Colleges (AAMC), specialty societies, hospital associations, and policymakers, to develop and promote best practices and model approaches to expand clinical rotation opportunities; and, be it further.

RESOLVED, that the AOA ~~develop and disseminate model legislative and regulatory language to assist~~ **SUPPORT** state osteopathic associations in advancing policies supporting expanded clinical training capacity~~; and, be it further~~

31 ~~RESOLVED, that the AOA study barriers to hospital participation in UME and~~
32 ~~propose actionable solutions to increase clinical training capacity nationwide~~.

SUBJECT: MICHIGAN STATE UNIVERSITY COMBINING DO MD PROGRAMS

SUBMITTED BY: Iowa Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, The American Osteopathic Association holds that osteopathic medicine is a complete and distinct branch of medicine[1]; and

WHEREAS, osteopathic medical school curriculum is unique in that osteopathic principals and practices are integrated throughout the curriculum[2]; and

WHEREAS, on March 11, 2026, Michigan State University announced that it would combine the DO and MD medical college programs into a single program[3]; and

WHEREAS, combining DO and MD medical school curriculum poses a significant risk to the distinct nature of osteopathic medical education; and

WHEREAS, Michigan State University College of Osteopathic Medicine is accredited by the Commission on Osteopathic College Accreditation (COCA); and

WHEREAS, 34CFR602 permits public input into COCA accreditation standards and activities[4]; now, therefore be it

RESOLVED, the American Osteopathic Association (AOA) shall notify Michigan State University of its deep concern regarding the combining of the DO and MD programs; and be it further

RESOLVED, that the House of Delegates of the American Osteopathic Association (AOA) expresses it deep concern regarding the merger of the Michigan State University (MSU) College of Osteopathic Medicine and MD degree programs to the Commission on Osteopathic College Accreditation (COCA); and be it further

RESOLVED, that the AOA closely monitor the program merger progress and as permitted under 34CFR602.23(c)(1) report to COCA any possible violations of COCA standards for their independent review.

SUBJECT: ADVOCATING FOR EQUITABLE REPRESENTATION ON ACGME REVIEW COMMITTEES FOR SMALLER INSTITUTIONS

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Accreditation Council for Graduate Medical Education (ACGME) Review Committees (RCs) are responsible for setting standards, reviewing programs, and making accreditation decisions that directly impact graduate medical education (GME) across the country [1]; and

WHEREAS, the current composition of ACGME RC has led to disproportionately representing larger academic institutions, which sponsor 25 or more residency or fellowship programs [2]; and

WHEREAS, smaller institutions (those representing fewer than 25 GME programs) are underrepresented in the makeup of these committees, with data suggesting that they comprise only 15% of the makeup of RCs, thereby limiting the voice and influence of rural, community-based, and non-academic programs [2]; and

WHEREAS, despite this minor representation, these institutions with less than 25 programs make up a larger 76% of the total ACGME-accredited programs in the country [2]; and

WHEREAS, the limited representation of these smaller institutions on the ACGME RCs reduces the visibility and advocacy for issues unique to osteopathic recognized programs, programs traditionally affiliated with osteopathic medical schools, rural/urban-based programs in community-affiliated training environments; now therefore be it

RESOLVED, that **THE AOA ADVOCATE** the Accreditation Council for Graduate Medical Education (ACGME) revise the selection process and composition of the Specialty Review Committees to prioritize increased and proportional representation from smaller institutions; and, be it further

RESOLVED, **THE AOA ADVOCATE** for initiatives to ensure that the voices of the rural, community-based, and osteopathically recognized programs are equitably represented in the ACGME governance and decision-making processes.

SUBJECT: SUPPORT OF OSTEOPATHIC RECOGNITION ~~AS THE GOLD STANDARD~~ FOR TRAINING IN GRADUATE MEDICAL EDUCATION

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, Osteopathic Recognition (OR) is a designation conferred by the Accreditation Council for Graduate Medical Education (ACGME) that distinctly acknowledges programs that provide structured training on osteopathic principles and practice and the tenets of osteopathic medicine in graduate medical education (GME) [1]; and

WHEREAS, the OR-Review Committee with the ACGME outlines specific standards for achieving OR status [1]; and

WHEREAS, Osteopathic Recognition has been reported to provide GME programs with tangible benefits:

- Allowing programs to apply osteopathic principles to fields of interest through support of education around quality holistic care, osteopathic manipulation, and osteopathic research [1]
- Allowing Doctors of Osteopathic Medicine (DOs), who continue to express interest in furthering their training in the philosophy of osteopathic medicine, to do so [6]
- Promoting an osteopathic approach to both improve patient satisfaction and lower cost [7]
- Providing a pathway for Medical Doctors (MDs) to pursue training in osteopathic technique [6]
- Providing standards for the training of residents/fellows in graduate medical education, which has been acknowledged as the most critical in learning Osteopathic Principles in Practice (OPP) if physicians are to retain their skills in Osteopathic Medicine [#]

WHEREAS, to date, the number of programs that have achieved OR is far smaller than the number of programs previously accredited by the American Osteopathic Association before the establishment of the Single Accreditation System (SAS) with the ACGME [2,3]; and

WHEREAS, the American Association of Colleges of Osteopathic Medicine (AACOM) published in August of 2024 the results of a study on the barriers to achieving Osteopathic Recognition, with hopes that the results would drive ideas/methods to overcome these barriers [4]; and

WHEREAS, some successful OR programs have already demonstrated viable models of maintaining and expanding high-quality osteopathic training to help in overcoming these barriers, demonstrating that collaboration, access to resources, and the championing of OR are keys to success [5]; now, therefore be it

~~RESOLVED, the American Osteopathic Association (AOA) supports the Accreditation Council for Graduate Medical Education (ACGME) Osteopathic Recognition as the gold standard for graduate medical education programs seeking to provide comprehensive osteopathic training; and, be it further~~

RESOLVED, the AOA encourages continued research, exploration, and evaluation of mechanisms to optimize the training of residents and fellows in osteopathic principles and practice; and, be it further

RESOLVED, the AOA works collaboratively with the **ACCREDITATION COUNCIL FOR GRADUATE MEDICAL EDUCATION (ACGME)** ~~American Association of Colleges of Osteopathic Medicine (AACOM)~~ to identify and promote successful models of Osteopathic Recognition, provide guidance and resources to programs seeking recognition to ensure the continued strength and growth of osteopathic education and training in graduate medical education.

SUBJECT: SUPPORT FOR THE OSTEOPATHIC EQUIVALENCY ACT

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Osteopathic Profession was founded in 1874 by Andrew Taylor Still, MD, DO, on the principles of holistic, patient-centered care; the interrelationship of structure and function; the body's innate capacity of self-healing, and the integration of scientific rigor with compassionate medical practice [1]; and

WHEREAS, despite the scientific and clinical soundness of osteopathic medicine, early osteopathic physicians faced significant systemic discrimination, including exclusion from hospitals, postgraduate training programs, and professional recognition solely due to the osteopathic degree designation [2,3]; and

WHEREAS, through perseverance, advocacy, and demonstrated excellence in patient care, osteopathic physicians overcame these barriers, achieving full licensure in all 50 states, parity in scope of practice, and integration into the United States healthcare system [2,3]; and

WHEREAS, today's osteopathic physicians (DOs) are fully licensed, independently practicing physicians who serve in every medical specialty, including primary care, surgical care, specialty care, and academic medicine, holding leadership roles within healthcare systems and governmental institutions [2,3]; and

WHEREAS, persistent misconceptions regarding osteopathic medical education, licensure exams Comprehensive Osteopathic Medical Licensure Exam, (COMLEX), training pathways, and professional equivalency continue to create unnecessary barriers for osteopathic physicians and students at the institutional and regulatory levels [4,5,6]; and

WHEREAS, the proposed Osteopathic Equivalency Act seeks to affirm in statute that Osteopathic physicians, their licensure exam, medical education, graduate medical training, board certification, and pursuit of clinical training opportunities shall be recognized as equal and equivalent to those of allopathic physicians and medical schools; and

WHEREAS, statutory affirmation of osteopathic equivalency supports physician workforce development, expands access to care, reduces unnecessary administrative burdens, and promotes fairness and clarity for healthcare institutions, regulators,; now, therefore be it

34 RESOLVED, that the American Osteopathic Association (AOA) formally endorses
35 and approves the language and intent of the Osteopathic Equivalency Act;
36 and, be it further

37 RESOLVED, that the AOA shall advocate for the adoption of the Osteopathic
38 Equivalency Act within the State of Ohio.

7. American Osteopathic Association. The Osteopathic Equivalency Act.
IN THE GENERAL ASSEMBLY OF THE STATE OF OHIO
Osteopathic Medicine Equivalency Act
Be it enacted by the General Assembly of the State of Ohio:
Section 1. Title. This act shall be known as and may be cited as the "Osteopathic Medicine Equivalency Act."
Section 2. Purpose. To ensure adequate access to medical care, and address workforce shortages byproviding universal recognition of osteopathic medical education, training, certification and practice.
Section 3. Definitions.
(a)American Board of Medical Specialties (ABMS) is an organization of approved medical boards representing areas of specialty medicine. Member boards certify specialists in medical specialties and subspecialties.
(b)American Osteopathic Association (AOA) is the entity that serves as the primary certifying body for osteopathic physicians and formerly served as the accrediting agency for osteopathic graduate medical education.
(c)Commission on Osteopathic College Accreditation (COCA), is an independent accrediting agency recognized by the United States Department of Education to accredit colleges of osteopathic medicine in the United States.
(d)Comprehensive Osteopathic Medical Licensing Examination of the United States (aka "COMLEX-USA") is a three-level, national exam developed by the National Board of Osteopathic Medical Examiners (NBOME) for osteopathic licensure, assessing medical knowledge, skills, and is a graduation requirement for DO degrees.
(e)Doctor of Osteopathic Medicine or Osteopathic Physician (DO) means a graduate of a COCA-accredited college of osteopathic medicine (drafting note: insert practice act citation).
(f)Liaison Committee on Medical Education (LCME), is an independent accrediting agency recognized by the United States Department of Education to accredit colleges of medicine in the United States.
(g)Medical Doctor or Doctor of Medicine (MD) means a graduate of a school of medicine accredited by the Liaison Committee on Medical Education or international equivalents, as recognized in (drafting note: insert practice act citation).
(h)Osteopathic Manipulative Medicine (OMM) means the application of osteopathic philosophy, structural diagnosis and use of Osteopathic Manipulative Treatment (OMT) in the diagnosis and management of the patient, by a physician licensed to practice in this state.
(i)Osteopathic Manipulative Treatment (OMT) means the therapeutic application of manually guided forces by a physician licensed to practice in this state under (drafting note: insert practice act citation) to improve physiologic function and/or support homeostasis that has been altered by somatic dysfunction.

(j)Physician means a doctor of osteopathic medicine/osteopathic physician, or a medical doctor/doctor of medicine, as defined above.United States Medical Licensing Examination (aka “USMLE) is a three-part examination that medical students and graduates must pass to become licensed to practice medicine in the United States. The USMLE is developed and sponsored by the Federation of State Medical Boards (FSMB) and the National Board of Medical Examiners (NBME).

Section 4. Requirements.

(a)A person holding a license to practice medicine and surgery as a Doctor of Osteopathic Medicine shall be authorized to exercise all the same rights, privileges, duties and responsibilities possessed by licensed Doctors of Medicine in this state.

(b)Holders of MD degrees and DO degrees shall be accorded equal professional status and privileges as licensed physicians and surgeons. Any reference to “Medical doctor”, “MD”or “physician” shall be deemed to include a Doctor of Osteopathic Medicine, DO or an osteopathic physician, unless any of those terms is specifically excluded; however,physicians shall only use the abbreviation corresponding with the school of medicine/osteopathic medicine from which they graduated, as outlined in the definitions

(c)Any entity that requires that the physician be granted or eligible for certification by an appropriate member board of the American Board of Medical Specialties (ABMS) must also recognize equally certification by the AOA. In the absence of explicit recognition, it shall be construed that ABMS also includes AOA.

(d)Students of colleges of osteopathic medicine and schools of medicine shall be accorded equal access (including via fees) to state funded training institutions including clinical rotations, postgraduate residency training programs and fellowships.

(e)Any reference to the USMLE (or its predecessor exams) shall also be deemed to include reference to the COMLEX (or its predecessor exams) for osteopathic physicians, unless specifically excluded.

Section 5. Effective.

This Act shall become effective immediately upon being enacted into law.

Section 6. Severability.

If any provision of this Act is held by a court to be invalid, such invalidity shall not affect the remaining provisions of this Act, and to this end the provisions of this Act are hereby declared severable.

SUBJECT: RECOMMENDATION FOR MILITARY EXPERIENCE REQUIREMENTS FOR MEDICAL ADVISORS OF HPSP OSTEOPATHIC MEDICAL STUDENTS

SUBMITTED BY: Association of Military Osteopathic Physicians and Surgeons

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Health Professions Scholarship Program (HPSP) provides a vital and significant pipeline of highly qualified osteopathic physicians to the United States Armed Forces; and

WHEREAS, HPSP medical students face unique administrative, educational, and professional challenges during their undergraduate medical education, including securing active duty clerkship rotations, fulfilling specific military training requirements, and managing complex obligations prior to graduation; and

WHEREAS, navigating the intricacies of military bureaucracy—such as coordinating with military recruiters and interfacing with entities like the Army Human Resource Command (HRC)—requires specialized knowledge and firsthand experience that civilian advisors may lack; and

WHEREAS, local chapters of the Association of Military Osteopathic Physicians and Surgeons (AMOPS) serve as critical support networks for these students and require strong, experienced mentorship to thrive; and

WHEREAS, integrating military-specific medical topics (e.g., operational medicine, trauma protocols, triage, and deployment readiness) into the foundational education of these students ensures they are better prepared for military Graduate Medical Education (GME) and active duty service; and

WHEREAS, maintaining active engagement with military medical organizations ensures an advisor remains up-to-date on rapidly changing military policies, GME requirements, and advocacy initiatives; and

WHEREAS, a medical advisor who has successfully navigated these pathways is uniquely positioned to advocate effectively for the specific needs of future military physicians; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) recommends that the designated medical advisor for military Health Professions Scholarship Program (HPSP) students at colleges of osteopathic medicine possess extensive medical experience as a physician in the United States military, having served either as an active duty HPSP recipient, a Uniformed Services

University of the Health Sciences (USUHS) graduate, a direct accession physician, or as a physician currently involved with the Reserves or National Guard; and, be it further

RESOLVED, that the AOA recommends that the core responsibilities of this medical advisor explicitly include:

1. Serving as a dedicated mentor to individual military medical students throughout their undergraduate medical education;

2. Collaborating closely with school administrators, registrars, and deans to promote, accommodate, and advocate for the unique administrative, scheduling, and training needs of military medical students;

3. Advocating for and facilitating military medical student clerkship rotations;

4. Assisting in the incorporation of military-specific medical topics into the college's basic undergraduate medical education curriculum;

5. Providing direct support, guidance, and mentorship to the local campus chapters of AMOPS; and

6. Actively interfacing with military recruiters and human resource commands (e.g., Army HRC) to streamline administrative processes and alleviate student issues; and, be it further

RESOLVED, that the AOA recommends that this designated medical advisor maintain active membership in the Association of Military Osteopathic Physicians and Surgeons (AMOPS) to remain current on evolving military medical issues, policies, and advocacy efforts.

SUBJECT: PROTECTION AND SUPPORT OF OSTEOPATHIC MANIPULATIVE TREATMENT (OMT) PRACTICE BY OSTEOPATHIC PHYSICIANS IN MILITARY GRADUATE MEDICAL EDUCATION, ENVIRONMENTS

SUBMITTED BY: Association of Military Osteopathic Physicians and Surgeons

REFERRED TO: Committee on Educational Affairs

WHEREAS, Doctors of Osteopathic Medicine (DOs) receive comprehensive education and training in Osteopathic Principles and Practice (OPP) and Osteopathic Manipulative Treatment (OMT) throughout undergraduate medical education; and

WHEREAS, upon graduation from an accredited college of osteopathic medicine, successful completion of required licensing examinations (including COMLEX-USA Level 3 or equivalent), and attainment of an unrestricted medical license, DO physicians are legally authorized to independently practice the full scope of osteopathic medicine, including OMT; and

WHEREAS, the transition to a single accreditation system under the Accreditation Council for Graduate Medical Education has resulted in many osteopathic physicians training in residency programs historically led by allopathic (MD) faculty; and

WHEREAS, this dynamic is particularly evident within military graduate medical education systems, including programs within the Defense Health Agency, where osteopathic physicians frequently train under supervising physicians who may not have formal education, training, or credentialing in OMT; and

WHEREAS, some supervising physicians in such programs report a lack of formal education, training, or credentialing in OMT and consequently restrict or prohibit osteopathic residents from performing OMT, citing inability to supervise; and

WHEREAS, in military medicine, where musculoskeletal injuries, readiness optimization, and return-to-duty timelines are critical, OMT represents a valuable, evidence-informed modality that can enhance force health protection, reduce reliance on pharmacologic therapies, and improve operational readiness; and

WHEREAS, the inability or unwillingness of supervising physicians to oversee OMT creates a barrier to the continuation of osteopathic practice, undermines the

distinctiveness of osteopathic medical training, and may contribute to skill atrophy among osteopathic residents, particularly in austere or operational environments where such skills may be uniquely beneficial; and

WHEREAS, the practice of OMT by appropriately trained and licensed DO physicians does not inherently require direct supervision by a physician trained in OMT, provided that the physician performing the treatment is competent and practicing within their scope and institutional policies; and

WHEREAS, limiting the ability of osteopathic residents to perform OMT solely based on the supervising physician's lack of familiarity is inconsistent with principles applied to other specialized skills in medicine, where credentialed physicians may perform procedures independently within their scope of practice; and

WHEREAS, the osteopathic profession, including military osteopathic physicians represented by AMOPS, has a vested interest in preserving, promoting, and integrating osteopathic principles and OMT across all stages of medical training, including within military and operational settings; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) affirms that Doctors of Osteopathic Medicine who have graduated from an accredited osteopathic medical school and obtained appropriate licensure are qualified to practice Osteopathic Manipulative Treatment within their scope of practice, including during residency **AND FELLOWSHIP** training in both civilian and military graduate medical education systems; and, be it further

RESOLVED, that the AOA, with the support of the Association of Military Osteopathic Physicians and Surgeons, advocates that residency **AND FELLOWSHIP** programs within the ACGME system, including those within the Defense Health Agency, support osteopathic residents in the continued practice of OMT and osteopathic principles, regardless of whether supervising faculty are allopathically trained; and be it further

~~RESOLVED, that the AOA advocates for military and civilian institutions to develop policies that allow DO residents and staff physicians to perform OMT based on their training, demonstrated competency, and licensure, without unnecessary restriction due to supervising physician familiarity or credentialing gaps; and be it further~~

~~RESOLVED, that the AOA encourages the Defense Health Agency and affiliated graduate medical education programs to recognize the operational and readiness value of OMT and to incorporate osteopathic principles into musculoskeletal care, rehabilitation, and force health protection initiatives; and be it further~~

69 ~~RESOLVED, that the AOA promotes the development of educational resources,~~
70 ~~faculty development programs, and optional credentialing pathways to~~
71 ~~increase familiarity with osteopathic principles among non-DO faculty in both~~
72 ~~civilian and military settings, while not making such training a prerequisite for~~
73 ~~allowing DO physicians to practice OMT; and be it further~~

74 ~~RESOLVED, that the AOA supports expansion of Osteopathic Recognition and~~
75 ~~osteopathic-focused training pathways within both civilian and military~~
76 ~~residency programs to preserve and advance osteopathic distinctiveness;~~
77 ~~and be it further~~

78 RESOLVED, that the AOA will collaborate with ~~accrediting bodies, including the~~
79 ~~Accreditation Council for Graduate Medical Education~~ **ASSOCIATION OF**
80 **MILITARY OSTEOPATHIC PHYSICIANS AND SURGEONS**, and with
81 military healthcare leadership to ensure that institutional policies do not
82 unjustly restrict the practice of OMT by qualified osteopathic physicians in
83 training or in active practice; and be it further

84 ~~RESOLVED, that the AOA disseminate this policy, in partnership with the~~
85 ~~Association of Military Osteopathic Physicians and Surgeons, to residency~~
86 ~~program directors, designated institutional officials, military medical~~
87 ~~leadership, and relevant accrediting organizations to promote awareness and~~
88 ~~implementation.~~

SUBJECT: GME EQUITY ANNUAL REPORT - SOURCE: H345-A/23

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Educational Affairs

WHEREAS, the 2023 House of Delegates adopted Policy H345-A/23 – AOA Support for GME Equity; and

WHEREAS, Policy H345-A/23 – AOA Support for GME Equity requires the AOA Board of Trustees to provide a report to the House of Delegates; now therefore be it

RESOLVED, that the 2026 House of Delegates accept the AOA Board of Trustees GME Equity 2026 Annual Report as outlined.

2026 GME Equity Annual Report

As the professional home for over 40,000 osteopathic medical students and 32,000 osteopathic residents and fellows, the American Osteopathic Association (AOA) remains committed to identifying and addressing barriers to equitable access to graduate medical education. Over the past year, the AOA continued to advance this work through coordinated advocacy, stakeholder engagement, data collection, and direct outreach to training programs and national organizations across the osteopathic and allopathic communities.

In collaboration with AACOM and NBOME, the AOA engaged osteopathic affiliates to strengthen and align the osteopathic voice in response to the ACGME's ongoing revisions to the Common Program Requirements. The overarching themes of the osteopathic community's recommendations to the Common Program Requirements are:

- AACOM, AOA, and NBOME recommend that ACGME explicitly address the following in the Institutional and Common Program Requirements to ensure equity and inclusion for osteopathic medical students and graduates: All programs must recognize the value of COCA-accredited osteopathic medical education and treat DO applicants and residents equitably.
- Any bias or exclusionary language—such as limiting eligibility to LCME graduates or requiring USMLE scores on program websites—violates ACGME standards. ACGME should monitor and cite programs that exhibit patterns of discrimination against DOs.
- Programs must accept COMLEX-USA for DOs from COCA-accredited schools and USMLE for MDs from LCME-accredited schools and international graduates. Programs must not require DOs to take USMLE in

addition to COMLEX-USA for application, promotion, or completion purposes. This would prevent unnecessary exam duplication, reduce financial and emotional burden, and ensure appropriate and valid licensure pathways for all residents.

- Programs should actively recruit and support a diverse and inclusive workforce that includes DOs, MDs, and international graduates. Annual reporting should include data and practices related to inclusive recruitment across these pathways.
- Program directors must ensure that all residents are informed of their eligibility and options to pursue either AOA or ABMS board certification. The ACGME should monitor compliance with this requirement and take appropriate action against programs that fail to inform or that discourage residents from pursuing AOA board certification.

The AOA also engaged directly with the Accreditation Council for Graduate Medical Education (ACGME) through formal and informal channels, including participating in stakeholder summits, submitting requirement comments, and planning education for the GME community. In December 2025, AOA and Bureau of Osteopathic Specialists (BOS) leadership participated in a virtual meeting with the ACGME Common Program Requirements Task Force, where discussions focused on ensuring that residents are appropriately informed about AOA board certification and addressing challenges associated with current board pass rate requirements, particularly for smaller programs.

To further inform and reinforce this advocacy, the AOA conducted a survey of osteopathic physicians who completed residency training after 2020, as well as AOA board-certified ACGME faculty. Survey findings highlighted ongoing gaps in awareness and advising related to osteopathic board certification:

- 68 percent of residents reported they were not informed about AOA board certification during training
- Among those who were informed, 16 percent were discouraged from pursuing certification and 13 percent were required to take an additional certifying exam
- 43 percent of AOA board certified faculty reported that their programs did not inform residents about AOA board certification

These findings continue to inform the AOA's advocacy strategy and reinforce the need for greater accountability, transparency, and education within training environments.

Throughout the year, the AOA strengthened its engagement in national governance and advisory roles across the graduate medical education continuum. The AOA solicited and advanced nominations of osteopathic physicians, residents, and students to key leadership positions, including the National Resident Matching Program (NRMP) Board of Directors, the Accreditation Council for Graduate Medical Education (ACGME) Board of Directors, and ACGME Review and Recognition Committees. These efforts are essential to ensuring that osteopathic

83 perspectives are represented in decision making bodies that shape policy,
84 accreditation standards, and the residency selection process.
85
86 The AOA expanded its direct engagement with program directors and graduate
87 medical education leaders. In November 2025, the AOA presented for the first time
88 at the Organization of Program Director Associations (OPDA), providing education
89 on AOA board certification and discussing opportunities to improve parity for
90 osteopathic medical students and residents, including acceptance of COMLEX
91 USA. This outreach builds on continued efforts to engage program leadership in
92 meaningful dialogue on equity, transparency, and the value of osteopathic training.
93 Following the OPDA presentation, AOA certifying boards continued and developed
94 new relationships with the program director associations for psychiatry, orthopedic
95 surgery, obstetrics and gynecology, family medicine, and radiology. AOA Certifying
96 Board Services will continue its outreach to all specialty program director
97 associations.
98
99 AOA staff and leadership continued to respond to concerns from osteopathic
100 medical students and physicians through the dedicated do-
101 discrimination@osteopathic.org inbox. Through this work, the AOA directly
102 communicates with programs to reinforce expectations for fair and equitable
103 treatment related to access to audition rotations, program acceptance of COMLEX-
104 USA scores, and discriminatory language in program materials or communications.
105 These efforts contributed to broader awareness of persistent barriers and informed
106 ongoing advocacy with ACGME, American Association of Medical Colleges
107 (AAMC), and NRMP.
108
109 In December 2025, the AOA filed a lawsuit against the American Board of Internal
110 Medicine (ABIM) challenging its policy that limits board certification eligibility for
111 residents and fellows based on the certification of their program director. The policy
112 does not recognize AOA board certified program directors as eligible to attest to
113 training, which restricts access to ABIM certification pathways for otherwise
114 qualified trainees and limits leadership opportunities for osteopathic physicians
115 within ACGME accredited programs. The AOA is seeking to ensure fair access to
116 certification and to preserve choice for residents and fellows in their board
117 certification pathways.
118
119 This year, the House Judiciary Committee Subcommittee published a report on the
120 residency matching program's antitrust exemption, and legislation was introduced to
121 repeal the exemption. The AOA is actively engaged in monitoring this legislation
122 and is working to ensure that the interests of osteopathic medical students and
123 residents are represented in any potential policy changes.
124
125 The AOA also continues to monitor the evolution of the single GME accreditation
126 system. In February 2026, the AOA and AACOM participated in a plenary session
127 at the ACGME Annual Educational Conference titled "Serving the Public and GME
128 Community: A Decade of Single Accreditation." The session engaged a national

audience and incorporated real time polling to better understand ongoing challenges related to equity, advising, and residency pathways.

In June 2026, the ACGME will convene Single GME Summit, which AOA and AACOM have been actively involved in the planning. The Single GME summit will bring together national allopathic and osteopathic leaders to examine how bias, inconsistency, and lack of transparency affect progression for osteopathic medical students and residents across the medical education continuum—from application through residency training. Discussions will focus on recruitment, program director decision-making, and the training environment, with particular attention to how residents are welcomed, valued for their educational background, and supported in understanding certification pathways. The summit will produce shared insights and identified actions to reduce bias, improve alignment across organizations, and strengthen the resident experience.

The AOA remains committed to advancing fairness and equity across the medical education continuum. Through continued advocacy, stakeholder engagement, and data driven insights, the AOA is working to ensure that osteopathic medical students and physicians are evaluated fairly, supported throughout training, and fully recognized for their contributions to patient care and the physician workforce.

SUBJECT: IMPROVING ACCESS TO PHYSICIAN-LED CARE -WHITE PAPER - SOURCE: H343-A/21

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs (CERA) has reviewed the policy; and determined to reaffirm it with amendments to better reflect the current landscape;

WHEREAS, the CERA believes it is essential that AOA establish a clear position in promoting access to physician led care and maintains the recommendations put forward in the white paper approved in 2021; However, replacing the prior white paper with a statement of recommendations supports clear communication to the public of the AOA's position while ensuring that its recommendations are not impacted between 5-year reviews due to literature becoming outdated; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED AS AMENDED.

~~White Paper~~ —Improving Access to Physician Led Care

Policy Statement

THE AMERICAN OSTEOPATHIC ASSOCIATION SUPPORTS A COMPREHENSIVE APPROACH TOWARDS IMPROVING ACCESS TO PHYSICIAN-LED, TEAM-BASED CARE AND MITIGATING PHYSICIAN WORKFORCE SHORTAGES, THEREBY ENSURING THAT PATIENTS ACROSS THE COUNTRY HAVE ACCESS TO TIMELY, HIGH-QUALITY CARE. TO ACHIEVE THIS, THE AOA RECOMMENDS:

1. **ENSURING THAT MEDICAL EDUCATION IS ACCESSIBLE AND AFFORDABLE TO FOSTER CONTINUED AND DIVERSE GROWTH IN THE PHYSICIAN WORKFORCE. THIS MAY BE ACHIEVED BY:**
    - **EXPANDING STATE AND FEDERAL LOAN FORGIVENESS PROGRAMS**
    - **SUPPORTING SCHOLARSHIP PROGRAMS TAX CREDITS OR OTHER FINANCIAL INCENTIVES FOR INDIVIDUALS WHO COMMIT TO PRACTICING IN HIGH-NEED SETTINGS AND SPECIALTIES**
2. **ENCOURAGING MEDICAL STUDENTS TO TRAIN AND SPECIALIZE IN HIGH NEED SETTINGS AND SPECIALTIES BY:**
    - **EXPANDING OPPORTUNITIES FOR MENTORSHIP AS THESE**

RELATIONSHIPS HAVE A STRONG INFLUENCE ON MEDICAL STUDENTS' DECISIONS ON WHICH RESIDENCY PROGRAMS AND SPECIALTIES THEY PURSUE;

- **IDENTIFYING AND SUPPORTING STUDENTS WHO COMMIT TO PRIMARY CARE EARLY IN THEIR EDUCATION AND TRAINING;**
- **FUNDING LONGITUDINAL PRIMARY CARE TRAINING EXPERIENCES; AND**
- **INCREASING SUPPORT FOR HEALTH RESOURCES AND SERVICES ADMINISTRATION (HRSA) PROGRAMS SUCH AS THE NATIONAL HEALTH SERVICE CORPS AND THE TEACHING HEALTH CENTER FOR GRADUATE MEDICAL EDUCATION PROGRAM.**

3. **ENSURING ADEQUATE PAYMENT THAT SUPPORTS DELIVERY OF PRIMARY CARE IN RURAL AND UNDERSERVED SETTINGS, INCLUDING THROUGH ESTABLISHING PARITY BETWEEN MEDICARE AND MEDICAID PAYMENT RATES.**
4. **ENSURING THAT TEAM-BASED CARE IS THE PRIMARY APPROACH TO EXPANDING ACCESS BY:**
   - **MAINTAINING CONSISTENT STANDARDS FOR PHYSICIAN LICENSURE, EDUCATION, AND COMPETENCY;**
   - **PRESERVING PHYSICIAN LEADERSHIP WITHIN CARE TEAMS;**
   - **RECOGNIZING THAT SCOPE OF PRACTICE EXPANSIONS REDUCE STANDARDS OF CARE AND INCREASE COSTS, ESPECIALLY FOR PATIENTS WITH COMPLEX NEEDS.**

ULTIMATELY, IMPROVING ACCESS TO PHYSICIAN-LED CARE REQUIRES INITIATIVES THAT TARGET EDUCATION, WORKFORCE DEVELOPMENT, AND RETENTION OF PHYSICIANS IN HIGH NEED SETTINGS.

~~The American Osteopathic Association adopted the white paper, Improving Access to Physician-Led Care as its position on leveraging the physician-led, team-based model of care to meet our nation's growing health care needs in a safe and cost-effective manner.~~

~~**Improving Access to Physician-led Care**~~

~~**Overview**~~

~~This paper addresses the primary care physician workforce shortage, identifying potential solutions dispels notions that scope of practice expansions can address the issue.~~

~~**Background**~~

~~Numerous factors contribute to the growing physician workforce shortage in the United States, currently projected to exceed 139,000 physicians by 2030.[1] These include an aging population (including among physicians), an increase in the number of insured individuals following the enactment of the Affordable Care Act (ACA) and related state Medicaid expansions, and the~~

[1] X. Zhang, D. Lin, H. Pforsich, and V. W. Lin. 2020. Physician workforce in the United States of America: forecasting nationwide shortages. *Human Resources for Health.* Article, National Center for Biotechnology Information, Washington, DC.

~~arbitrarily low cap on Medicare-funded graduate medical education (GME, aka "residency") positions for physicians that was established by Congress in 1997, as well as Medicare, Medicaid and other payor payment rates which have failed to keep pace with the increasing cost of providing care~~

~~According to a 2020 study published by the American Association of Medical Colleges, the United States population is expected to grow by 10.4% (from about 327 million to 361 million) by 2033, while the population over age 65 is expected to grow by 45.1%.[2] Further, more than 2 in 5 currently practicing physicians will reach retirement age in the next decade.[3] In addition, more than 20 million Americans gained insurance coverage over the past few years under the ACA. Further, if the states that have not expanded Medicaid eligibility (12 as of January 2021) did so, nearly 4 million more individuals would become eligible for coverage.[4] These factors combine to create an increasing demand for physician services, while two major factors work against a supply-side increase: (1) the freeze on Medicare funding and geographic distribution of residency slots at their 1996 levels and locations, and (2) rising educational debt that is leading physicians who might otherwise choose to practice in physician shortage areas or in high need specialties to seek higher paying specialty positions in urban areas.[5]~~

~~Legislative Proposals~~

~~In order to address the growing physician shortage, some legislators have begun electing to circumvent evidence-based physician licensure pathways to allow non-physician clinicians (nurses, physician assistants, and even entirely new types of clinicians) to practice equivalently to physicians without completing similar education, training or testing.~~

~~There are several issues with this approach; namely, (1) that unlike physicians, the length, content and type of training (online vs. in-person, didactic vs. clinical, academic vs. practical, etc.) that these providers complete varies by state and sometimes even by provider, (2) research demonstrates that these individuals are largely drawn to the same areas where physicians are already practicing, and that (3) non-physicians tend to overprescribe/overutilize diagnostic tests, which, combined with their history of seeking pay parity with physicians legislatively once they achieve independent practice, makes it unlikely that these individuals will actually solve the cost and access issues that legislators are attempting to address~~

~~Physician licensure requirements are largely the same across states, and require four years of medical school, a comprehensive examination series followed by supervised postgraduate ("residency") training with progressively greater autonomy before they are allowed to independently treat patients. Medical school education is nationally standardized and includes two years of didactic study totaling upwards of 750 lecture/practice learning hours just within the first~~

[2] No author. June 2020. The Complexities of Physician Supply and Demand: Projections From 2018 to 2033. Association of American Medical Colleges. Report, IHS Markit Ltd., Washington, DC.
[3] *Id*.
[4] R. Garfield, K. Orgera and A. Damico. 2021. The Coverage Gap: Uninsured Poor Adults in States that Do Not Expand Medicaid. Issue Brief, Kaiser Family Foundation, San Francisco, CA.
[5] The Consolidated Appropriations Act, 2021 enacted into law on December 27, 2020, provides the Centers for Medicare & Medicaid Services funding for 1,000 new residency slots. This will support approximately 200 new Medicare-funded residency positions per year for five years.

111 ~~two years, plus two more years of clinical rotations done in community hospitals, major medical~~
112 ~~centers and doctors' offices. Residency programs are also standardized by specialty, and are~~
113 ~~comprised of 12,000 to 16,000 hours of supervised training through which physicians develop~~
114 ~~advanced knowledge and clinical skills relating to a wide variety of patient conditions over the~~
115 ~~course of three to seven years.~~

116

117 ~~While physician licensure requirements remain largely the same across the country – and in fact,~~
118 ~~the trend has been towards *increasing* physician education and training requirements over the years~~
119 ~~– some states have begun granting similar licenses to non-physician clinicians, upon completion of~~
120 ~~as little as a two-year master's degree (which may be done largely online), a single examination and~~
121 ~~no supervised postgraduate training, as in the case of nurse practitioners (NPs).~~[6] ~~Not only do NPs~~
122 ~~complete far fewer supervised clinical hours than physicians during their educational programs,~~
123 ~~their professional organization (the American Academy of Nurse Practitioners; "AANP") actually~~
124 ~~*opposes* requiring them to complete supervised residency training before becoming licensed to~~
125 ~~practice independently.~~[7] ~~Unsurprisingly based on their relatively short educational background,~~
126 ~~evidence shows that non- physician clinicians tend to overprescribe medication~~[8]~~, issue poorer~~
127 ~~quality referrals to specialists~~[9] ~~and order unnecessary diagnostic imaging~~[10] ~~compared to physicians,~~
128 ~~all of which expose patients to potentially costly, unnecessary and high-risk interventions, because~~
129 ~~their training has not prepared them to determine which cases warrant such care.~~

130

131 ~~Some states have also begun allowing non-physician clinicians who complete doctorates to refer to~~
132 ~~themselves as "doctors" regardless of whether the doctorate that they completed is academic rather~~
133 ~~than clinical in nature. Use of the title "doctor" in a clinical setting can easily confuse patients into~~
134 ~~thinking that they are being seen by a physician when the individual making medical decisions has~~
135 ~~vastly different education and training.~~[11]

136

137 ~~Despite these differences in education, training and testing, history shows that once non- physician~~
138 ~~clinicians achieve independent practice they often return to state legislatures to advocate for pay~~
139 ~~parity with physicians, thereby defeating any cost savings arguments for independent practice.~~[12] ~~All~~

[12] L. Kaplan, Louise and J. Gill. Advocating for Washington state ARNP payment parity. The Nurse Practitioner, Feb. 2020.

~~health care professions have an equal right to provide stakeholder input to the Centers for Medicare & Medicaid Services (CMS), which makes centralized decisions regarding health professional payment rates after taking into account factors such as the time it takes to perform a service, the technical skill and physical effort, the required mental effort, judgment and stress due to the potential risk to the patient, as well as practice expenses and professional liability insurance costs. Nonetheless, pay parity is a stated goal of organizations like the AANP, and their success achieving it legislatively rather than through evidence-based valuation protocols may encourage other non-physician clinician associations to seek similar rate increases from state legislatures. When combined with these providers' overutilization of costly medical procedures and prescriptions, it is unlikely that granting independent practice will have a positive impact on healthcare cost issues.~~[13]

~~In addition to cost concerns, research demonstrates that allowing non-physician clinicians to practice independently does not solve access-to-care issues either. In fact, it shows that these individuals largely choose to practice in areas where physicians are already practicing.~~[14] ~~To avoid this, some states have attempted to place initial geographic and practice area (i.e. primary care only) limits on a provider group in order to improve access in rural areas; however, historical trends show that once independent practice is achieved, these groups return to the legislature year after year in attempts to erode any remaining restrictions on their practice.~~[15] ~~These patterns demonstrate that while the stated goal of these groups may be to address cost and access issues, their true motivation is a desire to achieve similar practice rights and reimbursement to physicians without having to complete similar training and testing requirements that help to ensure patient safety.~~

~~A Better Way: the Physician led, Team-based Model of Care~~

~~Rather than the fragmented, two-tiered healthcare system described above, studies show that the optimal way to deliver high quality, cost-effective medical care is through a team-based model that utilizes the various strengths of each member of the healthcare team with a physician at the head.~~

~~A recent study by the National Academy of Medicine (NAM) found that "multidisciplinary team-based care is associated with better performance on traditional measures of health care quality, such as emergency department utilization and hospital readmissions. In addition, several studies have concluded that optimizing team-based care is a cost-effective intervention."~~[16] ~~These findings are consistent across settings, including ambulatory emergency departments, intensive care units, and nursing homes, as well as other settings. Among the research cited in the NAM analysis, a 2015 review of 52 studies of team-based care for hypertension found that teams achieved controlled blood pressure in 12 percent more patients than routine care did. They also cite another study finding that a team-based care model "that works in collaboration with primary care clinicians and patient-centered medical homes to provide home-based geriatric care management was associated~~

[15] See e.g. Massachusetts - 244 CMR 4.00 of 2012 (established independent practice for certified nurse midwives) and MA House Bill 552 of 2017-18 and MA House Bill 1028 of 2019-2020 (seek payment parity)

[16] Smith, C. D., C. Balatbat, S. Corbridge, A. L. Dopp, J. Fried, R. Harter, S. Landefeld, C. Martin, F. Opelka, L. Sandy, L. Sato, and C. Sinsky. 2018. Implementing optimal team-based care to reduce clinician burnout. NAM Perspectives. Discussion Paper, National Academy of Medicine, Washington, DC.

177 ~~with 7.1 percent fewer emergency department visits, 14.8 percent fewer 30-day readmissions, 37.9~~
178 ~~percent fewer hospital admissions, and 28.5 percent fewer total bed days of care, saving an~~
179 ~~estimated $200,000 per year after accounting for program costs."~~

180

181 ~~The best approach to improving healthcare quality while expanding system capacity is through~~
182 ~~expanding a physician and non-physician clinician workforce that is effectively trained in team-~~
183 ~~based care. Authorizing independent practice for non-physician clinicians is counterproductive to~~
184 ~~this effort, insufficiently supported by evidence, and potentially harmful to patient outcomes. There~~
185 ~~have been few randomized control trials (RCTs) assigning patients to different providers to~~
186 ~~compare cost and quality between physicians and non-physician clinician groups. Most studies have~~
187 ~~relied on analyses of claims and encounter data, and the few RCTs that have been conducted were~~
188 ~~plagued with serious methodological flaws.~~

189

190 ~~A June 2019 Medicare Payment Advisory Commission (MedPAC) report to Congress noted that~~
191 ~~practices that employ both NPs or physician assistants (PAs) and physicians might systematically~~
192 ~~direct lower acuity patients to NPs or PAs. Patients may also choose among physicians, NPs, and~~
193 ~~PAs based on their preferences or the perceived severity of their illness. To the extent that~~
194 ~~systematic differences exist in the types of patients treated by physicians compared with those~~
195 ~~treated by NPs or PAs that are not observable in the data (and thus cannot be adjusted for), these~~
196 ~~studies may not effectively isolate the effects of clinician type from other confounding factors.~~

197

198 ~~Additionally, the roles and responsibilities of nurses can vary in different settings, and definitions of~~
199 ~~autonomy varied between some RCTs conducted. An analysis published in 2014 found that "[i]n~~
200 ~~the evaluated studies, the assumption is that nurses possess the competence required for substituting~~
201 ~~physicians, but the level of substitution does not seem equal among studies. While the level of~~
202 ~~training may be a critical factor for an effective outcome, the studies report incomplete descriptions~~
203 ~~of nurses' roles and competencies".[17] Among the few RCTs that have been conducted, long-term~~
204 ~~outcomes and condition management for complex cases are also not sufficiently accounted for.~~

205

206 ~~An analysis published in the International Journal for Quality in Health Care in 2015 describes the~~
207 ~~limitations encountered in their analysis, stating that "the physiologic outcomes addressed in~~
208 ~~current research focused on changes in parameters such as blood pressure; a more meaningful~~
209 ~~outcome would be the proportion of subjects attaining disease control over time. Future studies~~
210 ~~should also examine rates of preventable hospitalizations and appropriate preventive care, such as~~
211 ~~vaccines and disease screening. Finally, studies with longer follow-up periods will allow for~~
212 ~~assessment of rates of retention in care".[18] A consistent concern among existing RCTs is the length~~
213 ~~of the follow-up period and the outcomes tracked over that period. Often, studies comparing~~
214 ~~advanced practice registered nurses and physicians have been limited to a single encounter or one~~
215 ~~month time frame.[19]~~

[18] Swan et al. "Quality of primary care by advanced practice nurses: a systematic review". International Journal for Quality in Health Care. 2015 Oct;27(5):396-404. doi: 10.1093/intqhc/mzv054.
[19] Id.

216

217 ~~The growing responsibilities that non-physician clinicians take on in our health care system,~~
218 ~~especially within collaborative care models, are critical. However, this is not sufficient to justify~~
219 ~~scope of practice expansions that can negatively impact patient care. While numerous studies~~
220 ~~highlight the quality of care provided by non-physician clinicians, it is critical to also recognize the~~
221 ~~shortcomings of the research and factors that they have been unable to account for.~~

222

223 ~~Additionally, while not well-documented, it is self-evident that that there is more fragmented care~~
224 ~~where independent practice for non-physicians exists, and physicians are often called upon~~
225 ~~following an initial misdiagnosis or negative outcome resulting from care from a lesser-trained~~
226 ~~clinician.~~

227

228 ~~**Evidence-based Solutions**~~

229

230 ~~***Targeted Funding***~~

231

232 ~~The cost to produce a physician in the U.S. is staggering, and recent studies show that 76 percent of~~
233 ~~all medical school graduates graduate with student loans, averaging approximately $190,000. With~~
234 ~~interest growing over the course of a three-to-seven-year residency program, the eventual~~
235 ~~repayment total for many physicians can exceed $400,000.[20] Recognizing the importance of a~~
236 ~~physician-lead medical workforce, a number of states have implemented successful graduate~~
237 ~~medical education and loan repayment programs that can serve as models for other states to help~~
238 ~~them attract physicians to provide care in much-needed specialties and areas.[21]~~

239

240 ~~One recent example is Oregon's Health Care Provider Incentive Fund (Fund), which was~~
241 ~~established in 2017 through an initial $16 million allocation to build health care workforce capacity~~
242 ~~in rural and medically underserved parts of Oregon and to provide resources Health Care Provider~~
243 ~~Incentive Program (HCPIP).[22] The funding is administered by the Oregon Health Authority (OHA)~~
244 ~~in partnership with the Oregon Office of Rural Health (OORH), and utilizes loan forgiveness, loan~~
245 ~~repayment, insurance subsidies and scholarships (including one at the Pacific Northwest College of~~
246 ~~Osteopathic Medicine) to assist qualified health care providers who commit to serving the state's~~
247 ~~Medicaid and Medicare beneficiaries for a certain period of time in rural and underserved areas of~~
248 ~~the state~~

249

250 ~~Specifically, the primary care loan forgiveness program provides loans to postgraduate trainees who~~
251 ~~agree to:~~

---

[20] M. Runge. Public service loan forgiveness can help fix the shortage of primary care and rural physicians. STAT+, August 11, 2017.
[21] No author. Loan Repayment/Forgiveness/Scholarship and Other Programs. Association of American Medical Colleges, no date.
[22] No author. Health Care Provider Incentive Program: Evaluation of Program Effectiveness. *Oregon Health Authority, Health Policy and Analytics Division, Primary Care Office*, Nov. 2020.

1. Practice for one to three years in an underserved Oregon community that has been federally defined as a Health Professional Shortage Area (HPSA), and

2. Serve Medicaid and Medicare members in at least the same percent as is present in the community.

If the provider still has debt upon completion of the program, they then become eligible for a loan repayment award.

In addition, the HCPIP also provides subsidies for malpractice insurance premiums for providers serving at a location that meets the OHA's definition of a rural practice. Subsidy payments from OHA are a percentage of the provider's malpractice premiums, with the highest subsidies awarded to providers of obstetrical care.

Lastly, the HCPIP funds scholarship awards at schools equal to the cost of a year of education, in exchange for a 1-year HPSA service obligation for each year funded.

As a result of these incentives, nine of the 16 areas identified as "target areas" for the program in 2018 have seen an increased number of full-time providers. A program evaluation identified COVID-19 as an obstacle to the growth and sustainability of the program in the last year; however, the program has adjusted to account for the increased use of telemedicine among awardees and also plans to increase targeted outreach to clinicians who are representative of those they serve to improve the program's reach to marginalized communities.

Another example of state success – as well as the negative impact associated with cutting funding for training programs – is the state of Texas, which has provided varying levels of funding for rural and primary care training programs through its Higher Education Coordinating Board (THECB) since the 1980s. Funded programs include:

- The Statewide Primary Care Preceptorship Program, which provides funding support to preceptorship programs in family practice, general internal medicine and general pediatrics, with the goal of encouraging Texas medical students to choose primary care careers by offering direct student support for a month-long experience in one of the specialties. A comprehensive nine-year study showed that students who participated in a family medicine preceptorship were almost twice as likely to pursue a career in family medicine, and of the 238 medical students who completed the preceptorships in 2009, 93 percent said the experience made them more receptive to primary care as a career[23];
- The Physician Education Loan Repayment Program, which provides loan repayment funds for physicians who agree to provide health care services to recipients enrolled

[23] https://www.tafp.org/Media/Default/Downloads/advocacy/Support_PC_residencies.pdf

292 ~~in Medicaid and the Texas Children's Health Insurance Program (CHIP), or in a~~
293 ~~Texas Juvenile Justice Department or Texas Department of Criminal Justice facility,~~
294 ~~for at least four years;~~

295 ~~- The State Rural Training Track Grant Program, which provides funding for~~
296 ~~residency programs in rural areas, with the goal of attracting physicians to remain in~~
297 ~~those areas to practice; and~~

298 ~~- The Family Practice Residency Program, which provides grants to the state's 31~~
299 ~~nationally accredited family medicine residency programs, located in every region of~~
300 ~~the state, in order to help increase the number of physicians who pursue family~~
301 ~~medicine and establish their practices in rural and underserved communities in~~
302 ~~Texas.~~[24]
303

304 ~~Although 66 percent of the physicians who completed residency training in Texas between 2008 -~~
305 ~~2017 chose to remain in the state upon completion~~[25] ~~— indicating a high return on investment for the~~
306 ~~aforementioned programs — funding has been variable and over the years some programs have been~~
307 ~~forced to close permanently:~~[26]

308 ~~- The Kelsey-Seybold Family Medicine Residency Program — considered a model for~~
309 ~~training new physicians in a team-based, multispecialty environment — announced its~~
310 ~~closure due to financial instability in 2009;~~

311

312 ~~- The Texas Tech University Rural Program in Abilene closed its doors for financial~~
313 ~~reasons in 2008; and~~

314

315 ~~- The Christus St. Elizabeth Family Medicine Residency Program in Beaumont was~~
316 ~~forced to close in 2002 due to a lack of financial support. Of the 74 graduates from~~
317 ~~the program practicing medicine in 2005, 88 percent practiced in health professional~~
318 ~~shortage areas.~~
319

320 ~~According to a recent report from the Department of State Health Services, Texas will need~~
321 ~~approximately 3,400 more primary care physicians than it is on track to produce by 2030 to meet~~
322 ~~demand. Despite this, the 2021 state budget cuts the Family Practice Residency Program from $5~~
323 ~~million a year to $4.75 million and reduces funding for family medicine residents from $14,300 per~~
324 ~~resident in 2011 to just $5,400 in 2021.~~[27]

325 ~~Considering the fact that it costs the state approximately $168,000 to produce one medical school~~
326 ~~graduate, and in 2016 (the most recent year for which data was available) it produced 180 more~~
327 ~~graduates than it had first-year residency slots — representing a lost investment of $30 million in that~~
328 ~~one year alone — any cost savings to the state by reducing funding for residency programs that have~~
329 ~~been proven effective in producing Texas-based primary care physicians is far outweighed by the~~

---

[24] https://www.highered.texas.gov/institutional-resources-programs/institutional-grant-opportunities/family-medicine-residency-program/
[25] https://www.aamc.org/data-reports/students-residents/interactive-data/table-c6-physician-retention-state-residency-training-state
[26] https://www.tafp.org/Media/Default/Downloads/advocacy/Support_PC_residencies.pdf
[27] https://www.tafp.org/news/tfp/q1-2021/lege-update

330 ~~financial loss that it incurs when physicians leave the state to train (and frequently remain)~~
331 ~~elsewhere.[28]~~

332 ~~It is important to note that the osteopathic profession has a longstanding commitment to providing~~
333 ~~care in rural and underserved areas, and many of the beneficiaries of the abovementioned programs~~
334 ~~are DOs. According to the 2019 Osteopathic Medical Profession Report, 57% of DOs currently~~
335 ~~practice in primary care specialties, surpassing the percentage of MDs entering primary care, which~~
336 ~~has been on the decline since 2011.[29] Many osteopathic medical schools are located in rural and~~
337 ~~underserved areas, and nine out of the top ten medical schools with the most graduates practicing~~
338 ~~primary care are osteopathic schools.[30] Further, in 2020, the Oklahoma State University College of~~
339 ~~Osteopathic Medicine at the Cherokee Nation became the first tribally-affiliated college of~~
340 ~~medicine in the United States.[31]~~

341 ~~***Driving Specialty Decisions at the Undergraduate Medical Education Level***~~

342 ~~The experiences of students during their first four years of medical education are critical in shaping~~
343 ~~professional interests. An analysis of the last 10 years of data from the American Association of~~
344 ~~Colleges of Osteopathic Medicine's (AACOM) graduate survey found that mentoring by faculty~~
345 ~~may have an outsized influence in decision making on future specialty and practice setting. In 2019,~~
346 ~~students who indicated that they intended to practice in primary care or in a rural setting also tended~~
347 ~~to be more satisfied with their faculty mentoring during the undergraduate medical career.[32] A~~
348 ~~similar survey by the Association of American Medical Colleges had similar findings, where 52.1~~
349 ~~percent of respondents cited "role model influence" as having a strong influence on their specialty~~
350 ~~choice in 2020. The June 2019 report by MedPAC evaluated the current pipeline of primary care~~
351 ~~physicians, and it came to similar conclusions regarding the influence of the undergraduate medical~~
352 ~~education experience on practice decisions.[33]~~

353 ~~This evidence suggests that specialty decisions are made well before graduation from medical~~
354 ~~school. Building training programs where students gain exposure to high-quality mentors in~~
355 ~~primary care, and even engage in community-oriented primary care education may ultimately make~~
356 ~~students more likely to go into a primary care specialty or practice in underserved settings.[34]~~
357 ~~Several Health Resources and Services Administration (HRSA) programs seek to strengthen~~
358 ~~primary care training and steer students at the undergraduate medical education level. Expanding~~
359 ~~these programs can be a useful tool in expanding the primary workforce in underserved~~
360 ~~communities~~

---

[33] "Issues in Medicare beneficiaries' access to primary care". Medicare Payment Advisory Commission Report to Congress. June 2019. http://www.medpac.gov/docs/default-source/reports/jun19_ch5_medpac_reporttocongress_sec.pdf?sfvrsn=0
[34] Magzoub, Mohi Eldin M. A. MD, PhD; Schmidt, Henk G. PhD A Taxonomy of Community-based Medical Education, Academic Medicine: July 2000 - Volume 75 - Issue 7 - p 699-707

361 ~~HRSA's 2020 report to the HHS Secretary states that expanding the availability of longitudinal~~
362 ~~training programs, instead of 4-8 week rotations, provide meaningful education in health~~
363 ~~promotion, disease prevention, and care management for the chronically ill, while also making~~
364 ~~students more likely to ultimately specialize in primary care.[35][36] While HRSA has some grant~~
365 ~~programs that can help institutions develop innovative undergraduate medical education programs~~
366 ~~to address workforce shortages, much of HRSA's work focuses on graduate medical education. A~~
367 ~~grant program for innovation in primary care and development of longitudinal programs could help~~
368 ~~expand the pipeline of students who choose primary care upon graduation.~~

369 ~~Data from HRSA also suggests that there is strong demand for primary care training, and additional~~
370 ~~funding for students could support more students in pursuing a medical education that emphasizes~~
371 ~~this type of practice. The National Health Service Corps (NHSC) is one program that supports~~
372 ~~students who choose to pursue a medical education and practice in primary care. The NHSC~~
373 ~~scholarship program has been highly successful, but it can only support a limited number of~~
374 ~~applicants. In 2019, the program saw nearly 1,900 applicants, but only 200 new awards were~~
375 ~~granted. Identifying more students who are interested in primary care early in their careers,~~
376 ~~encouraging commitment, and providing financial support for their education in this specialty can~~
377 ~~help produce more providers who are ready to meet the needs of rural and underserved communities~~
378 ~~across the country.~~

379 ~~***Enhancing Payment for Medicaid***~~

380 ~~Medicaid enrollees comprise a significant share of primary care visits and ensuring that physician~~
381 ~~practices that serve Medicaid populations receive payment at level that is needed to remain viable is~~
382 ~~critical to promoting access in rural and underserved communities. On average, state Medicaid~~
383 ~~programs pay for healthcare services at 72 percent of the Medicare rate; for primary care services,~~
384 ~~that number drops to 66 percent.[37]~~

385 ~~Increasing Medicaid payment to at least an equal level with Medicare will allow more physicians to~~
386 ~~accept Medicaid patients and attract them to practice in high-need settings. An analysis by Health~~
387 ~~Affairs describes how physicians cite low reimbursement rates as a deterrent to participation.~~
388 ~~Additionally, a MACPAC and University of Minnesota analysis of National Ambulatory Medical~~
389 ~~Care Survey data found that the proportion of physicians accepting new patients varies significantly~~
390 ~~based on patient coverage type. Providers were less likely to accept new patients with Medicaid,~~
391 ~~with 70.8 percent accepting new patients, than with Medicare (85.3 percent) or private insurance~~
392 ~~(90.0 percent). MACPAC also found in their analysis that state Medicaid reimbursement was~~

[37] Zuckerman, Skopec, and Epstein. "Medicaid Physician Fees after the ACA Primary Care Fee Bump." Urban Institute, March 2017. https://www.urban.org/sites/default/files/publication/88836/2001180-medicaid-physician-fees-after-the-aca-primary-care-fee-bump_0.pdf

393 ~~correlated with new patient acceptance. Every 1 percentage point increase in the Medicaid-to-~~
394 ~~Medicare fee ratio appears to increase acceptance by 0.78 percentage points.[38]~~

395 ~~Other studies have confirmed the MACPAC finding. A recent study by the Federal Reserve Bank of~~
396 ~~Chicago analyzed the impact of the Medicaid primary care rate increase that was implemented by~~
397 ~~the ACA and expired in 2015. The study found that the increase in Medicaid payments was~~
398 ~~associated with improvements in access and health measures among Medicaid beneficiaries. The~~
399 ~~study also found a correlation between Medicaid rates and usage of health care services by~~
400 ~~beneficiaries. The researchers identified that a $10 increase in physician reimbursement is~~
401 ~~associated with a 0.29 percentage point (1.5 percent) increase in the probability that respondents~~
402 ~~covered by Medicaid went to a doctor's office in the preceding two weeks.[39] This is likely because~~
403 ~~increased availability of providers and appointment times supports patient engagement in their own~~
404 ~~care, as well as longitudinal relationships between patients and providers.~~

405 ~~Federal policies should ensure that Medicare payment rates serve as a floor for Medicaid rates.~~
406 ~~Improving Medicaid rates will help primary care practices afford to practice in settings with a larger~~
407 ~~share of Medicaid patients.~~

408 ~~**Conclusion**~~

409 ~~Effectively leveraging a physician-led, team-based model of care delivery is critical to meeting our~~
410 ~~nation's growing health care needs moving forward. Although the investment required of state and~~
411 ~~federal governments in order to adequately address these issues is significant, as the research above~~
412 ~~demonstrates, effectively training physicians in areas of high need and utilizing the physician-led~~
413 ~~team model will help us achieve cost-effective solutions without sacrificing quality of care.~~

414 ~~Physicians remain the only category of health care professional to complete comprehensive medical~~
415 ~~education, training and competency demonstration requirements that is designed to ensure the~~
416 ~~highest, uniform standards of care nationwide. While other provider types have sought to increase~~
417 ~~their education and training in recent years, the fact remains that there is a lack of consistency,~~
418 ~~uniformity and information about the long-term outcomes of these providers, who largely resist~~
419 ~~physician involvement while continuing to seek equivalent rights and reimbursement once they~~
420 ~~achieve independent practice, which defeats the stated goals of legislatures in granting them such~~
421 ~~rights.~~

422 ~~All patients deserve to be treated by fully trained and licensed medical professionals, regardless of~~
423 ~~location or ability to pay, and the physician-led, team-based model of care ensures that fully~~
424 ~~licensed physicians are appropriately involved in patient care while valuing the unique training and~~
425 ~~skill sets of all health care providers.~~

SUBJECT: REFORMING THE HEALTH IT LANDSCAPE TO IMPROVE THE PATIENT AND CLINICIAN EXPERIENCE- ~~WHITE PAPER~~ - SOURCE: 344-A/21

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and

WHEREAS, the CERA believes it is essential that AOA establish a clear position in appropriate health IT regulation and maintains the recommendations put forward in the white paper approved in 2021; however, replacing the prior white paper with a statement of recommendations supports clear communication to the public of the AOA's position while ensuring that its recommendations are not impacted between 5-year reviews due to literature becoming outdated; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED AS AMENDED

Policy Statement

THE AMERICAN OSTEOPATHIC ASSOCIATION SUPPORTS EFFORTS THAT STRENGTHEN NATIONWIDE INTEROPERABILITY OF PATIENT HEALTH DATA, EMPOWER PATIENTS AS OWNERS OF THEIR DATA, AND ENSURE SEAMLESS EXCHANGE AND AVAILABILITY OF DATA AT THE POINT OF CARE. TO ACHIEVE THIS, AOA WILL SUPPORT POLICIES AND INITIATIVES THAT:

- CONTINUE TO STRENGTHEN BASELINE STANDARDS FOR DATA EXCHANGE ACROSS THE HEALTHCARE ECOSYSTEM;
- ADVANCE STANDARDS THAT FOSTER INNOVATION;
- SUPPORT EFFORTS THAT MAKE PATIENT DATA AVAILABLE AT THE POINT OF CARE, WITHIN PHYSICIAN WORKFLOWS, WHILE MINIMIZING BURDEN;
- ENSURE THAT PATIENT HEALTH DATA IS ADEQUATELY PROTECTED, INCLUDING WHEN PATIENTS ENTER DATA INTO THIRD-PARTY, CONSUMER APPLICATIONS THAT ARE NOT CURRENTLY SUBJECT TO HIPAA;

- SUPPORT NEW FORMS OF DATA EXCHANGE THAT ENABLE CARE COORDINATION WITH COMMUNITY-BASED AND OTHER PROVIDERS THAT DO NOT RELY ON AND ARE NOT HISTORICALLY CONNECTED TO ELECTRONIC MEDICAL RECORDS;

- ENABLE PHYSICIAN PRACTICES TO SUCCESSFULLY ADOPT AND IMPLEMENT INNOVATIVE HEALTH IT; AND

- SUPPORT AUTOMATION OF ADMINISTRATIVE PROCESSES.

EXPLANATORY STATEMENT: The above outlined objectives reflect the policy goals outlined in the white paper “Reforming the Health IT Landscape to Improve the Patient and Clinician Experience”. Replacing AOA policy with an evergreen statement ensures that policy is current and not tied to potentially outdated literature in a rapidly evolving technological environment.

~~The American Osteopathic Association adopted the white paper, Reforming the Health IT Landscape to Improve the Patient and Clinician Experience as its position on policies to empower consumers with their personal health data while ensuring that information is seamlessly provided to physicians at the point of care.~~

~~Reforming the Health IT Landscape to Improve the Patient and Clinician Experience~~

~~Overview~~

~~This paper addresses the evolution of health information technology (HIT), recent HIT efforts and shortcomings, opportunities to improve HIT infrastructure to support patient care and clinicians and identifies potential solutions.~~

~~Introduction~~

~~Information technology in the healthcare industry has steadily advanced over the past two decades. Much of this growth can be attributed to the widespread adoption and meaningful use of electronic medical records (EHRs). However, adoption and utilization of EHRs has not been easy for physician practices or free from burden.~~

~~As the use of EHRs has increased, recent legislative activities have shifted to address longstanding barriers to interoperability and electronic exchange of healthcare information. This paper policy solutions to enhance interoperability of healthcare data, improve accuracy, increase efficiency, and reduce administrative burden.~~

~~The Evolution of Health Information Technology~~

~~The first major incentive for HIT started with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) when the federal government mandated that health plans, healthcare clearinghouses, and certain healthcare providers comply with technical data requirements for electronic transactions. HIPAA established standards for electronic exchange of data; code set standards for diagnosis, procedures and diagnostic tests; unique identifiers for employers, providers and health plans; standards for storage of data at medical facilities, health insurance companies, and billing clearinghouses; and privacy standards to protect sensitive patient health information (PHI) from being disclosed without the patient's consent or knowledge.~~

~~In 2001, the Administrative Simplification Compliance Act required that all initial Medicare claims be submitted electronically, except in limited situations. However, it was the HIPAA provisions for simplifying administration of health insurance that encouraged the healthcare industry to computerize patients' medical records. This specific part of the Act spawned the Health Information Technology for Economic and Clinical Health Act (HITECH).~~

~~The use of the EHR has been a consistent topic of frustration and burnout for physicians across the U.S. healthcare system. When the HITECH Act passed in 2009, its purpose was to make health data storage, sharing, and reporting more seamless and efficient, easing provider workloads, enhancing the patient experience, and improving care quality.~~

~~In 2011, the meaningful use (MU) component of HITECH was implemented to expand the adoption of HIT and facilitate the use of EHRs. The HITECH Act authorized the Centers for Medicare & Medicaid Services (CMS) to establish the Medicare and Medicaid EHR Incentive Programs. These programs paid approximately $35 billion in incentive payments to eligible professionals, hospitals, and critical access hospitals to adopt, implement, upgrade, and demonstrate the use of certified EHR technology (CEHRT).[i] The reporting requirements involve the ability of an EHR to perform such functions as generating problem lists, exchanging patient clinical data, or e-prescribing.3 The MU program launched in three stages beginning in 2011. The focus of Stage 1 was data capture and sharing. In 2014, the Office of the National Coordinator for Health IT (ONC) created Stage 2, which sought to extend the requirements of Stage 1 and promote more advanced clinical processes. Stage 3 focused on improving overall outcomes. The combination of incentive payments for participation, paired with a penalty for failing to meet meaningful use criteria using the ONC certified technology, resulted in significantly expanded use of EHRs.~~

~~To qualify for federal funds, eligible healthcare professionals and hospitals not only had to adopt EHRs but also demonstrate meaningful use of CEHRT by achieving minimum core objectives in each stage of the MU program. It was also~~

~~necessary to demonstrate compliance with the HIPAA security and privacy rules by conducting risk assessments. Even with the financial incentives, the requirements of the MU program were overly burdensome for physician practices and failure to meet them resulted in reduction of Medicare and Medicaid payments. While interoperability was one of the goals for the MU program, it failed in that regard. However, the financial incentive to adopt EHRs gave birth to an industry whose technology was not quite ready for its intended purpose, which is evident by the lack of uptake in the free market.~~

~~In 2016, MU was wrapped into the Merit-Based Incentive Payment System (MIPS) established under the Medicare Access and CHIP Reauthorization Act (MACRA). In 2018, CMS renamed the Medicare and Medicaid EHR Incentive Programs to the Promoting Interoperability Programs to better align with MACRA provisions for electronic exchange of healthcare information.~~

~~MACRA sought to promote "widespread interoperability" which it defined as "the ability of two or more health information systems or components to exchange clinical and other information and use the information that has been exchanged by means of common standards to provide access to longitudinal information for health care providers to facilitate coordinated care and improve patient outcomes."[ii]~~

~~In 2009, only 12.2 percent of hospitals had adopted a basic EHR system. By 2017, the number of hospitals with an ONC certified EHR systems increased to 96 percent of hospitals[iii] and 80 percent of office-based physicians[iv]. Despite this rapid adoption of EHR technology, the vision of the HITECH Act and MACRA, an interoperable health data ecosystem that promoted efficiency and value in the healthcare system, was far from realized.~~

~~Data systems across the country became fragmented and were not interoperable. This was partially due to misaligned incentives in the HITECH Act that were heavily focused on provider requirements, with emphasis on adoption of an EHR with basic capabilities. As the program progressed, incentives were not shifted towards information exchange until MACRA, at which point a highly siloed health data environment had formed. In 2016, a survey of healthcare providers found that "only 6% of healthcare providers report that information accessed from exchange partners on a different EMR is delivered in an effective way that facilitates improvement to patient care." Additionally, platforms often were not designed in a usable manner, with only 8 percent of providers reporting that data could be received and located within the workflow.[v] The lack of efficient technology manifests in high rates of burnout and time taken away from patients. An observational study of physician practices found that physicians spend 27 percent of their time with patients and 49.2 percent of their time on EHR and desk work. While in the examination room with patients, physicians spent approximately 53 percent of the time face-to-face with patients and 37 percent on~~

~~the EHR.~~[vi]

~~Recent HIT Efforts and Shortcomings~~

~~Congress addressed the fragmentation of data and lack of exchange in our healthcare system in the 21st Century Cures Act (Cures Act). Like MACRA, it mandated support for interoperable network exchange to be spearheaded by the ONC in collaboration with the National Institute of Standards and Technology and other divisions of HHS. ONC engaged in rulemaking in 2018 and 2019 to implement the interoperability and information blocking provisions of the Cures Act. This was done in tandem with the CMS Interoperability and Patient Access final rule, which developed new HIT compliance requirements for providers and certain payers to improve the electronic exchange of healthcare data and enable patients to safely and securely access their medical information through a third-party application of their choice.~~

~~The ONC rule made sweeping changes to HIT regulation to promote data sharing, empower consumers by granting them greater control over their data, and prevent healthcare entities from blocking the sharing of health data. The rule established a standard for the development of application programming interfaces (APIs), required EHR developers publish their APIs to ensure that different softwares and networks are able to effectively exchange information, and updated EHR certification criteria with a focus on interoperability. The update involves replacing the Common Clinical Data Sets required for certification with the new United States Core Data for Interoperability (USCDI).~~

~~The new data requirements are more extensive and will promote patient matching, tracking origins of data, and supports the sharing of clinical notes. Ultimately, USCDI establishes standards and formats for data to allow more seamless sharing. The rule also defines what entities are covered by information blocking, defines what constitutes information blocking, and outlines exceptions. The information blocking provisions of ONC's Cures Act final rule took effect on April 5th, 2021, with various compliance dates staggered through 2023.~~[vii]

~~These recent actions have helped level the playing field and create a regulatory framework that enables true interoperability across the U.S. healthcare ecosystem. However, much work needs to be done to ensure that the promise of true interoperability is realized, and that seamless health information exchange can be used to support population health and enhance the patient and clinician experiences.~~

~~Opportunities to Improve HIT Infrastructure to Support Patient Care and Clinicians~~

~~The next step in this process is to ensure that information is readily available to physicians and other clinicians at the point of care to improve the quality and~~

~~efficiency of care, and to ensure that the health IT infrastructure is improved to better serve communities that are often left behind in our health care system. Areas that critically need to be addressed to achieve these goals include the following:~~

~~Effective matching of patient data~~

~~Patient identification (patient matching) remains a persistent problem in ensuring that electronic health record (EHR) data is complete and accurate. Errors and missing information remain common in the electronic health record ecosystem, with several studies indicating that between 8 to 22 percent of all records are split or duplicate.[viii ix] These high-duplication and mismatched rates often translate into unnecessary resource use and poor outcomes when patient records are not up-to-date or contain inaccurate information. A 2016 report indicated that 4 percent of duplicate records result in negative clinical care and outcomes.[x] Split and mismatched records make it difficult for physicians to have the full picture of a patient's health and care received, and it also makes it more difficult for the patient to have access to their full record.~~

~~Access to Data at the Point of Care~~

~~Access to a patient's complete medical history, including procedures, chronic conditions, and medication history, is critical to delivering high quality care. However, patients frequently misreport and or provide incomplete histories, which can result in negative outcomes due to harmful drug interactions or procedures conducted without knowledge of another comorbid condition. A study of 2,063 patients whose histories were collected during emergency department (ED) triage found that of all patients identified as taking medications, 48 percent failed to identify at least one of their medications, with a median of two drugs missed. Of the drugs missed at triage, 73 percent were prescription medications. xi Patients will often omit parts of their medical history for various reasons: focusing only on information the patient believes to be important, forgetting of information due to complex histories or medication lists, or intentional omission. While improved interviewing can improve this issue, access to comprehensive records at the point of care is the optimal and most efficient way to obtain a complete picture of a patient's health. Enhanced sharing of patient data can also be used to create analytics tools built into EHR workflows.~~

~~Streamlining Prior Authorization Processes to Eliminate Care Delays~~

~~Prior authorization is a cumbersome process that requires physicians to obtain pre-approval for diagnostic procedures and medical treatments before they can render care to their patients. While the process is often conducted electronically, prior authorization sometimes needs to be obtained over the phone or via fax. Even when obtained electronically, payors have different processes, policies, and electronic platforms. The process for obtaining this approval is costly. The~~

~~Council for Affordable Quality Healthcare (CAQH) estimated that the financial impact of prior authorization requirements to providers in 2019 was approximately $528 million, and the average transaction takes 21 minutes of provider staff time.[xii] If the healthcare industry were to fully shift to electronic prior authorizations with consistent technical standards that allow submissions from a single platform, providers could save 17 minutes per transaction and $355 million per year. However, for providers who do submit electronic prior authorizations, the process is still partially manual, as they need to log into separate portals for each payor and complete varying documentation requirements. Because prior authorization platforms do not integrate with the provider's EHR system, the process generates significant barriers to the efficient care of patients. The current method for prior authorization is costly for providers, detracts from time spent with patients, and often forces patients to go without care or delays care. This can lead to needless increased suffering for the patient and worsening of their condition, ultimately leading to increased cost of care. In order to have a truly effective prior authorization process, fully integrated electronic universal standards must be incorporated by all payers.~~

~~Enhancing Health IT Regulatory Frameworks to Address Social Determinants of Health~~

~~A quickly growing body of research indicates that social determinants of health may have a greater impact on a patient's overall health and outcomes than treatment they receive. The HHS Healthy People 2030 initiative defines social determinants of health as the "conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks." It groups these factors into five domains, which include economic stability, education access and quality, healthcare access and quality, neighborhood and built environment, and social and community context.[xiii] A recent article published in Health Affairs compiles various studies that estimate the relative impact of various health determinants on outcomes.[xiv] A study published by the University of Wisconsin- Madison found that behaviors contribute to 30 percent of outcomes, social circumstances contribute to 40 percent, environment contributes to 10 percent, and medical care contributes to 20 percent of outcomes. Overall, other studies have come to similar conclusions that 80 percent of the contributors to health outcomes are social determinants of health.[xv]~~

~~The COVID-19 pandemic particularly highlighted the impact of social determinants on outcomes and how social factors can drive disparities. Over the course of the pandemic, data has demonstrated that housing status, socioeconomic factors, and behaviors such as smoking were significant determinants of whether an individual contracted COVID-19 and the severity of their case. A study published in 2020 highlights how beyond infection, there are other downstream consequences from the pandemic. For example, children who depend on school lunches may face nutrition issues due to school closures.[xvi]~~

~~During the pandemic, the U.S. also saw unprecedented use of telehealth to expand access to health services and improve care. However, there are clear gaps in health IT infrastructure that prevent social determinants from being recorded and addressed.~~

~~The U.S. health system, and healthcare infrastructure, are not historically well equipped for coordinating care or capturing data outside the clinical setting. While ICD-10 codes exist for capturing information about social determinants of health in health records, many providers are not well educated on how to use them. Additionally, these codes often lack precision. At the same time, a regulatory framework for sharing health information and coordinating care with community-based organizations is relatively weak. These organizations often use different information management tools than health providers, and standards do not exist for data exchange. Even amongst certified health IT products, ONC does not have a required technical standard for sharing information related to social determinants of health. These challenges not only prevent sharing of individual level data for informed clinical decision making, but also stifle the aggregation of patient data to better understand the impact of social determinants.~~[xvii]

~~Capturing and sharing social determinants of health information is critical to improving care coordination and management both within and outside of a clinic's four walls. However, the task of capturing this data should not fall solely on physicians. Ultimately, to build a health care system that is equipped to address social determinants of health, and to build an infrastructure for value-based care systems, changes to current HIT infrastructure are critical.~~

~~Appropriate Use of Data by Third-Party Apps and Patient Protections~~

~~Patient engagement in their own care and health maintenance is critical to overall well-being and promoting better outcomes. Patient health applications provide not only an opportunity for patient engagement in their own care, but they can also empower patients to share data with physicians and provide a clearer picture of their medical history. This is the goal of the CMS Interoperability and Patient Access final rule. However, third party apps are not properly regulated, and health data, which comprises some of the most sensitive information about an individual, can be compromised and exploited when downloaded onto third-party platforms. When patients want to use a health management application, they are often required to agree to user "terms and conditions" which often contain language permitting the developer to pass along user information to third parties. A recent study examining the 24 top-rated Android apps for health medicine management found that 19 of the 24 apps shared user data with third parties. Of these apps that shared data, 66 percent of the third parties that these apps shared data with "provided services related to the collection and analysis of user data, including analytics or advertising,~~

~~suggesting heightened privacy risks."[xviii]~~

~~Solutions~~

~~Effective Matching of Patient Data~~

~~ONC should create technical standards and best practices governing how patients can monitor, update, or verify their information through applications and portals. The ONC's final rule on interoperability gives patients unprecedented ownership over their own data, and this creates an opportunity to allow them to review demographic information that can impact the movement and matching of their record across platforms. Additionally, minor changes to data standards will help facilitate exchange of certain patient information. ONC should also standardize address formats within the USCDI and add a standard for gender identity.~~

~~Access to Data at the Point of Care~~

~~The CMS Interoperability and Patient Access rule finalized in 2020 requires Medicare Advantage plans, Medicaid and Children's Health Insurance Program (CHIP) managed care plans, state agencies and Qualified Health Plans on federally facilitated exchanges to enable payor-patient exchange of claims data via FHIR API. This capability should be expanded to enable a payor-provider claims data exchange via FHIR API, and this should also apply to ACA qualified plans and Employee Retirement Income Security Act (ERISA) plans. The API should be similar to CMS' Data at the Point of Care pilot enabled by the Blue Button 2.0 initiative. The pilot program has sought to give providers insight into patients' claims and medication histories within their EHR workflow so they could make more informed clinical decisions during a patient encounter. A change of this nature would require legislative action to grant federal agencies authority to regulate this information sharing and qualify non-compliance as a form of information blocking. Additionally, having data on cost and coverage can prevent loss to follow- up care, particularly for patients where out-of-pocket cost is likely to result in deferred care, and also reduce administrative burden associated with prior authorization.~~

~~Streamlining Prior Authorization Processes to Eliminate Care Delays~~

~~Because of the growing burden created by prior authorization processes, some congressional and regulatory action has been taken to begin to address the issue. Most recently, CMS issued transaction standard for electronic prior authorization (ePA) under the Part D e-prescribing program. These ePA transaction standards would allow prescribers to use an electronic prescribing (eRX) system or an EHR with an eRX system to determine whether a patient's Part D plan requires prior authorization for a given medication and to receive responses in real time.[xix] While this regulation had many positive aspects,~~

~~overall, given the limited scope of the part D program, it did little to address the larger issues of standardizing prior authorization across the healthcare system. Congress has also made a legitimate effort to respond to this issue and develop policy to standardize electronic prior authorization. However, nothing has passed into law at the time of this publication, and active legislation during the 117th Congress is limited in scope to just Medicare Advantage (MA) plans.~~[xx]

~~To achieve fully standardize electronic prior authorization that integrates into a provider's workflow, legislation must be enacted that establishes technical requirements for private insurance plans regulated under the ACA and ERISA, as well as all CMS contractors that administer MA plans. This legislation must establish a universal electronic prior authorization (ePA) program and require all healthcare plans to adopt ePA capabilities that follow a single technical specification that allows payor platforms to seamlessly connect to other certified health IT. As is current practice, prior authorizations should still be reviewed by qualified medical professionals, and finally, there should be a streamlined process for reviewing prior authorization policies on routinely approved items and services. These changes are critical to ensuring that a provider's workflow is efficient, and that patient care is not delayed or impeded, resulting in worse outcomes.~~

~~Enhancing Health IT Regulatory Frameworks to Address Social Determinants of Health~~

~~In order to ensure that health IT can be leveraged to address social determinants of health, several changes to the current environment are needed. These changes would address the issues of data capture, interoperability and exchange, value-based care and payment.~~

~~To address improved data capture, three key changes will help ensure that health records contain more robust information on social determinants. First, ICD codes need to be made more granular to ensure appropriate information capture, and providers need to be educated on how to use relevant codes. Additionally, universal reimbursement standards should be developed to ensure consistent coding and appropriate payment for screening for social determinants and linkage to appropriate services. To address interoperability and exchange, ONC should add a data class to the USCDI to ensure that data relating to social determinants of health can be captured and shared in certified health IT. Health Level Seven (HL7) launched an initiative called the Gravity Project to create national standards for representing social determinant data in health IT. In October 2020, the Gravity Project submitted two approaches to ONC for adding a new data class for social determinants of health.~~[xxi] ~~Testing and adopting these standards will help ensure improved information sharing. In addition to the new USCDI data class, the AOA encouraged ONC to develop a pilot project to identify how to help community-based organizations better integrate their data systems with certified health IT.~~

~~Once health IT infrastructure is strengthened, HHS, plans, and providers can leverage newly available data to drive development of value-based initiatives. Because factors beyond the care rendered by a physician have such significant influence on a patient's outcomes, it is critical that efforts to address social determinants are incorporated into value-based initiatives. Several efforts to achieve this are ongoing. An analysis by one managed care organization found that its efforts to meet patients' needs for social services by referring them to resources for transportation, food programs, financial assistance for utilities, education programs, and housing services helped reduce health expenditures by as much as 10 percent for patients who had social needs met.[xxii] However, action by providers at the point of care can have a greater impact, and models should be designed that incentivize and reward providers who help identify and address patients' social needs.~~

~~Appropriate Use of Data by Third-Party Apps and Patient Protection~~

~~In 2021, the comment period closed on a proposed rule by the HHS Office for Civil Rights (OCR) to modify HIPAA. The rule fell short in advancing the security of sensitive patient data as it relates to third party apps. While the rule adds a definition for a "patient health application", it does not consider these applications covered entities. Since the user of a third-party application agrees to the "terms and conditions", and the applications are not covered entities, individually identifiable consumer health information collected by the apps or on personal health trackers often does not have to be stored and used in compliance with HIPAA requirements for protected health information (PHI). As such, third-party apps are allowed to transfer, sell, or share patient's data without informing the consumer to obtain consent.~~

~~OCR should recognize applications on which patients can download PHI as a covered entity or require them to develop business associate agreements with vendors from whom they download data. Alternatively, if these approaches are not feasible, OCR should create a new class of entity that is subject to HIPAA privacy rules that captures these applications. HHS should also develop standards for authenticating patient identities to ensure that the third-party apps are held to similar standards as patient portals of HIT vendors.~~

~~While most of these solutions may be able to be address through the rule making process, some reforms will have to be codified through new federal legislation. In light of this, legislation which prevents data mining, sharing, or selling of personal health data by third-party apps must be passed into law.~~

~~There has been a willingness to work on this issue in Congress, in particular in the Senate Committee on Health, Education, Labor and Pensions (HELP), which has discussed this during public hearings, and with the introduction of legislation which seeks to address these gaps. Healthcare stakeholders must advocate for~~

~~the passage of legislation which guarantees that no third-party entities are not allowed to transfer, sell or share any individually identifiable consumer health information collected regardless of the modality used to collect such data so that patients may continue to be an active participant in their own healthcare and be protected under the law without fear of losing their privacy by their use of third-party apps.~~

~~**Conclusion**~~

~~Throughout its history, HIT and EHR data entry has been a consistent topic of administrative burden and burnout for physicians across the U.S. Even when the government provided monetary incentives, it had become abundantly clear that reaching the goal of a fully interoperable EHR ecosystem that aids physician clinical decision making and lowers cost while improving quality of care is easier said than done. While the topics outlined in this document are by no means a fully comprehensive list of every concept or solution needed to fix the HIT ecosystem, it is clear that to fully realize the benefits of digital health information, we must first have truly meaningful data.~~

~~As outlined above, this includes, but is not limited to, the implementation of legislative and regulatory policies which empower consumers with their personal health data while ensuring that information is seamlessly provided to physicians at the point of care. However, to have the greatest impact, we must go beyond just access to medical data for physicians. In this new digital world, we must also provide appropriate patient protections for any data which is acquired and used by any third-party apps. Finally, we must support and help implement future policies that improve community well-being by enhancing the HIT regulatory frameworks that influence non-medical social determinants of health factors that affect health outcomes. While much of the legislative and regulatory work is slow and tedious, if implemented correctly, effective EHR data has the possibility to improve quality of care while lowering costs, ultimately resulting in promoting healthy communities across the United States.~~

SUBJECT: INTRACTABLE AND / OR CHRONIC PAIN (NOT ASSOCIATED WITH END-OF-LIFE CARE - SOURCE: H308-A/21

SUBMITTED BY: Council on State Health Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant; now, therefore be it

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED.

Policy Statement

The American Osteopathic Association supports the enactment of legislation concerning the administration of controlled substances to persons experiencing intractable and/or chronic nonmalignant pain that includes definitions and provisions substantially conforming to the following; and will advocate and promote to students, residents, fellows and practicing physicians educational resources regarding substance use disorders, diversion awareness and monitoring and appropriate referral resources, as well as the prevention and treatment of pain disorders.

Definitions:

A. Intractable pain means a pain state in which the cause of the pain cannot be removed or otherwise definitively treated and which, in the generally accepted course of medical practice, no relief or cure of the cause of the pain is possible or none has been found after reasonable efforts including, but not limited to, a face-to-face evaluation by the attending physician and/or other physicians specializing in the treatment of the area, system, or organ of the body perceived as the source of the pain. Chronic non-malignant pain may be associated with a long-term incurable or intractable medical condition or disease.[1]
Chronic pain means “pain that typically lasts >3 months or past the time of normal tissue healing. chronic pain can be the result of an underlying medical disease or condition, injury, medical treatment, inflammation, or an unknown cause.”[2]

Provisions:

A. Notwithstanding any other provision of law, a physician may prescribe or administer controlled substances to a person in the course of the physician's

treatment of the person for a diagnosed condition causing intractable and/or chronic pain. This includes patients with ~~chemical dependency and/or substance abuse history~~ **SUBSTANCE USE DISORDER** if chronic pain exists and controlled substance management is indicated. Physician hypervigilance in screening for drugs of abuse, as well as the presence of the treatment medication in these patients is necessary.

B. No physician shall be subject to adverse action (by the state medical board, employers, insurers, etc.) for appropriately prescribing or administering controlled substances in the course of treatment of a person for intractable pain and/or chronic pain.

C. No physician shall be subject to criminal prosecution (by state or federal agencies) for appropriately prescribing or administering medically necessary controlled substances in the course of treatment of a person for intractable pain and/or chronic pain.

D. This section shall not authorize a physician to prescribe or administer controlled substances to a person the physician knows to be using drugs or substances for non-therapeutic purposes.

E. This section is not intended to interfere with the power (of the state medical board) to deny, revoke, or suspend the license of any physician who fails to keep accurate records of purchases and disposal of controlled substances, writes false or fictitious prescriptions for controlled substances, or prescribes, administers, or dispenses in violation of state controlled substances acts.

WHEREAS, BORPH created a Guideline ~~development~~ **UPDATE** Process to increase external credibility of the AOA guideline, and ensure **THAT** updates are predictable, evidence based, and **CONFORM WITH CURRENT CLINICAL PRACTICE GUIDELINE STANDARDS** ~~feasible~~, now therefore be it

RESOLVED, that the American Osteopathic Association (AOA) Guideline Update Process be approved, and be it further

RESOLVED, that AOA Bureau of Osteopathic Research and Public Health (BORPH) will provide an update on the revision of the “AOA Guidelines for Osteopathic Manipulative Treatment (OMT) for Patients with Low Back Pain” to the 2027 House of Delegates.

AOA Guideline Update Process

Guiding Principles

AOA guideline updates should be:

- Evidence-based
- Primary-care focused
- Transparent and reproducible
- Feasible for a small guideline portfolio
- Explicit about OMT-specific considerations

1. Establish a Guideline Oversight Committee

Structure (small, standing body):

- 4 - 5 osteopathic physicians with appropriate expertise
- 1 evidence-based medicine methodologist

Responsibilities:

- Monitor emerging evidence on OMT and low back pain
- Decide when an update is needed
- Oversee all stages of the update

Conflict of Interest (COI):

- Annual disclosures required
- Majority of members must be free of relevant financial COI
- Chair must be COI-free

2. Update Cycle

- Scheduled review every 5 years (default)

- Early update triggers, including:
    - New systematic reviews or RCTs on OMT for low back pain
    - New safety signals
    - Major changes in standard low back pain management
    - Conflicts with external guidelines from other professional associations or organizations

3. Scope Confirmation and Clinical Questions (PICO)

Before updating, the committee confirms:

- Population (e.g., adults with acute, subacute, or chronic low back pain)
- Interventions (OMT)
- Comparators (usual care, sham, physical therapy, pharmacologic care)
- Outcomes (pain, function, quality of life, adverse events)

4. Commission or Update a Systematic Evidence Review

Evidence Review Approach:

- Commission a targeted systematic review through:
    - An academic partner, OR
    - A small external evidence review group
- Search strategy and inclusion criteria must be publicly documented

Evidence scope:

- RCTs and high-quality observational studies

- Separate analyses for:
    - Acute vs. chronic low back pain
    - OMT vs. sham
    - OMT vs. usual care

5. Rate Evidence and Recommendations

- The current AOA guideline uses evidence graded as Evidence level 1a.

- For future updates the AOA will consider the GRADE (Grading of Recommendations, Assessment, Development, and Evaluations) methodology for evidence. https://methods.cochrane.org/bias/resources/cochrane-handbook

6. Develop or Revise Recommendations

Each recommendation should include:

- Clear recommendation statement
- Strength of recommendation (GRADE or Evidence level)
- Summary of supporting evidence
- Benefits vs. harms
- OMT-specific considerations

7. External Review and Public Comment (Scaled Model)

External Reviewers:

- At least 2 non-panel clinical experts

- 1 guideline methodologist
- Optional reviewer from another professional society

Public Comment:

- 21–30 day online comment period
- Responses summarized and documented

8. AOA Approval, Publication, and Dissemination

Final guideline approval by:

- AOA Bureau of Osteopathic Research and Public Health

Publication:

- The Journal of Osteopathic **MEDICINE** ~~Research~~ and AOA website
- Executive summary and clinician-friendly tools (algorithms, summaries)

9. Post-Publication Monitoring and Maintenance

After publication:

- Annual evidence scan (light-touch literature surveillance)
- Decision log documenting whether:
    - No update needed, or
    - Targeted update required

Background Information: Provided by AOA Staff
Current AOA Policy: 2009; 2014 Referred; 2015 Reaffirmed as Amended; 2020 Reaffirmed as Amended; 2025 Referred

Prior HOD action on similar or same topic: None

FISCAL IMPACT: $30,000
Funding for a consultant to complete a systematic review and meta-analysis on which to base the new guideline.

The AOA Finance Committee supports the fiscal impact.

SUBJECT: USE OF PLACEBOS IN END-OF-LIFE CARE – SOURCE: H310-A/24

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) submitted H310-A/2024 SR END-OF-LIFE CARE – USE OF PLACEBOS IN- (Source: H322-A/19) to the 2025 AOA House of Delegates and recommended that it be reaffirmed; and

WHEREAS, the 2025 AOA House of Delegates referred this policy back to BORPH and requested that BORPH review the primary scope and purpose of this resolution and update the references; and

WHEREAS, the policy was reviewed by the BORPH chair with the original authors of this policy written in 2004 and noted that the primary scope and purpose of the original resolution has devolved with the positive evolution of guideline informed, evidence based, and ethical standard of care for the treatment of pain at the end of life since 2004, and

WHEREAS, the BORPH also discussed this policy and concluded that this policy is no longer needed, now, therefore be it

RESOLVED, that the AOA Bureau of Osteopathic Research and Public Health (BORPH) recommend that the following policy be SUNSET.

End-of-Life Care – Use of Placebos In Policy Statement

The AOA approves the attached position paper on Use of Placebos for Pain Management in End-of-Life Care and will be updated according to the current literature.

USE OF PLACEBOS FOR PAIN MANAGEMENT IN END-OF-LIFE CARE

The placebo effect of medication can be a significant resultant action of any prescription. However, the substitution of a placebo in place of effective pain medication has been widely recognized as unethical, ineffective and potentially harmful. ([1-9]) A number of organizations have advised against the use of placebo substitution, including the American Pain Society, Agency for Healthcare Policy and Research, World Health Organization, the Healthcare Facilities Accreditation Program, Joint Commission on Accreditation of Healthcare Organizations, Education on End-of-Life Care Project (co-sponsored by the American Medical Association), American Nursing Association, and the American Society of Pain Management Nurses.

This white paper describes the literature and rationale in support of the AOA's position on the controversial subject of the use of placebos for pain management in terminally ill patients.

I. Definition of Terms

A. Placebo, placebo substitution, placebo effect and nocebo response

A placebo is a substance presumed to be pharmacokinetically inert. Placebo substitution means the substitution of a physiologically inactive substance for a comparison with the physiologically active substance. Placebo effect is the positive psychosomatic response of an individual to a treatment; in contrast, the nocebo response is a negative psychosomatic response to a treatment. ([10]) The placebo effect is an important adjunct in the treatment of symptoms. The alleviation of symptoms has an inherent positive psychological component; patients who perceive their symptoms to be relieved by the treatment and trust in their treating physician's treatment plan and/or prescription for the symptom relief are more likely to obtain relief. ([4 2])

Placebo responses are necessary for controlled clinical trials in which the patient is informed that a placebo may indeed be utilized. Physiologic responses to placebo can be pleasant or unpleasant to the patient. An unpleasant effect attributable to administration of a placebo is called a "nocebo response". A pleasant effect is called a "positive placebo response". It has been noted that, "a positive placebo response simply speaks to the strength of an individual's central control processes (i.e., mind) to recruit their descending inhibitory system to block pain. The trained osteopathic physician knows that pain relief occurs both in the mind and in the body." ([4]) The basis of the placebo effect in a therapeutic physician-patient relationship also involves good communication skills as well as listening to the patient. ([4, 11, 12])

To summarize, a placebo is a type of treatment, necessarily used in controlled clinical trials, that has no inherent physiological action yet is designed to mimic a therapy with a known active physiologic effect. Positive changes resulting from placebo administration would be due to expectations of success by the patient. Thus, the use of placebo effect is based on the patient's perception of the role of the placebo agent with symptom relief. The placebo response may be enhanced with a positive patient-physician relationship.

B. Addiction, substance **USE DISORDER**, abuse and dependence, tolerance, withdrawal, and pseudo-addiction.

Some physicians inappropriately justify using **A** placebo in pain management to avoid **GENERATING A SUBSTANCE USE DISORDER** "addicting" the patient. Addiction, as defined by the American Academy of Pain Medicine,([13]) "is a primary, chronic, neurobiologic disease, with genetic, psychosocial, and environmental factors influencing its development and manifestations. It is characterized by behaviors that include one or more of the following: impaired control over drug use, compulsive use, continued use despite harm, and craving."

Substance **USE DISORDER** abuse is defined as **THE HARMFUL USE OF SUBSTANCES DESPITE NEGATIVE CONSEQUENCES**. psychological and physical dependence on substances. Some physicians are concerned that prescribing narcotics may lead to substance **USE DISORDER** abuse and therefore may attempt to use a placebo to assess whether the patient truly requires narcotics for pain relief. However, there is no scientific basis for using placebo in the assessment of the patient in pain who has or may have the potential for a substance **USE DISORDER** abuse. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-V) ([14]), lists definitive criteria for diagnosis of psychological and physical dependence on substances. This text categorizes “Substance-Related Disorders” but does not utilize the term addiction; further, nowhere in the DSM-V is placebo administration utilized with criteria for diagnosing various forms of substance **USE DISORDERS.** abuse. Substance **USE DISORDER** dependence **ENCOMPASSES** is defined as a cluster of cognitive, behavioral, and physiological symptoms. The essential feature of a substance **USE DISORDER** dependent individual is continuous use of the substance despite significant substance-related problems, such as deleterious effects on occupation, relationships, health, and others.

Physicians may become uncomfortable with requests for increased dosages of pain medications, fearing that a patient is manifesting a substance-related disorder. A better understanding of the concepts of tolerance, physical dependence, physiological dependence withdrawal symptoms and pseudo-addiction, may help physicians understand and more effectively treat these patients.

Tolerance represents a markedly diminished effect that can occur with continued use of most medications; the degree depends upon the daily dose and length of use. The need for medication titration, either due to development of tolerance or to incomplete responsiveness, is a part of routine medical care. Tolerance occurs due to compensatory changes in receptors and/or increased clearance resulting from induction of various metabolic pathways. The problem of tolerance should therefore be anticipated as a possible outcome in prescription pain medications.

Withdrawal is defined by the DSM-V ([14]) as a maladaptive behavioral change having physiological and cognitive concomitants, which occurs when blood or tissue concentrations of a substance decline in an individual who had maintained prolonged use of the substance, frequently inappropriately. Examples of withdrawal include the onset of seizures or delirium tremens in a newly abstinent alcohol chemically dependent individual.

Pseudo-addiction is the term used to describe the behavior of a patient in pain who is receiving an insufficient amount and/or an inappropriate dosing frequency of administration of the prescribed pain medication. In an effort to obtain relief, the patient in pain would request more frequent and/or increased medication. Such “drug seeking behavior” has been deemed as “proof” of “addiction.” The reason for such requests is frequently that the patient is under-dosed, receiving too little of the medication and/or too long a delay between doses of the pain medication. In such instances, the patient receives inappropriate pain relief, which is not an appropriate criterion of a **SUBSTANCE USE DISORDER** substance-abusing patient according to the DSM-V. ([14])

II. Legal Considerations in the Use of Placebos in Pain Management

While there are no specific laws governing the use of placebos in any circumstance, there is a considerable amount of legislation regarding a patient's right to pain management. There are several state statutes that address this issue, some of which are based on the Federation of State Medical Boards' Model Guidelines for the Use of Controlled Substances for the Treatment of Pain.([15]) This document clarifies that legislative statutes accepting these guidelines understand the ongoing increased scientific knowledge of pain management, and thus have no need to modify legislation as the science of pain management changes. This document does not mention placebo usage.

The American Bar Association (ABA) ([16]) adopted a resolution concerning the promotion of pain management in all patients with chronic pain. This resolution states, "…that the American Bar Association urges federal, state, and territorial governments to support fully the rights of individuals suffering from pain to be informed of, choose, and receive effective pain and symptom evaluation, management and ongoing monitoring as part of basic medical care, even if such pain and symptom management may result in analgesic tolerance, physical dependence or as an unintended consequence shorten the individual's life." Placebo substitution for active pain medicine without informed consent on the part of the patients clearly violates the nature and substance of the ABA's position. Additionally, in two Supreme Court decisions regarding the right to assisted suicide, the court promoted the right of individuals to appropriate palliative care and pain management. ([17, 18])

While there is little case law concerning tort or administrative findings against physicians for inadequate pain management, this is likely to change in the near future. The main barrier to malpractice claims for inadequate pain management is use of the customary local standard to determine what constitutes ordinary care. The courts are steadily moving away from this standard to a national standard which uses clinical guidelines as the determinant of ordinary care. This is seen in the decision in the case of Nowatske v. Oserloh, where the court stated, "should customary medical practice fail to keep pace with development and advances in medical science, adherence to custom might constitute a failure to exercise ordinary care…" ([19])

Guidelines developed by the Agency for Healthcare Policy and Research, now the Agency for Healthcare Research and Quality ([1]), the American Pain Society, ([7]) the Healthcare Facilities Accreditation Program ([20]) as well as the Joint Commission on Accreditation of Healthcare Organizations ([21]) are good examples of sources the courts are using to determine ordinary practice. These guidelines do not support the use of placebo in any fashion except in approved research studies when the appropriate patient informed consent has been obtained. Therefore, the physician thus cannot justify the use of placebo for pain management by attempting to diagnose "addiction" or with support from any of the above regulatory agencies. ([5])
Furthermore, under California's elder abuse statute, ([22]) a physician was successfully sued by the deceased's family for inadequate pain management at the end of life. ([23])

III. Adverse Effects of Placebo Use

Pain is a universal experience and is subjective by nature. Despite the common colloquialism, “I feel your pain,” no individual can truly experience another’s pain. There are no laboratory tests or consistently reliable physical findings for assessment of pain. Patient self-report remains the gold standard for pain assessment. ([24]) Use of a placebo in place of an effective pain medication for attempting to determine whether the patient at end-of life is really in pain is under no circumstances appropriate.

There is a concern if a physician deceives the patient and substitutes a placebo treatment in the place of a known effective treatment without informing the patient. Deception has no place within the therapeutic relationship and is counter-productive. A physician may counsel a patient that “this treatment may be effective in treating your condition,” but evidence-based medicine cannot guarantee a treatment outcome.

In this era of informed consent, deception of the patient poses many problems, including erosion of the trust individuals and society as a whole have for physicians. There are methods of using placebos and the placebo effect that do not involve deceit, e.g., clinical trials or the use of placebo as one of the trial agents for neurolytic block. This one narrow exception uses the placebo trial as part of the treatment selection for neurolytic blockade, a highly specialized procedure performed by a few skilled pain management physicians with appropriate informed consent.

Substituting placebo for accepted forms of pain treatment is under-treatment of the condition. Under-treatment of pain, as detailed in the American Bar Association’s 2000 report, is an ongoing problem. ([25]) While there have been reports of placebo efficacy in pain management, placebo control of pain occurs in fewer patients and for shorter duration than active pain treatments. ([7, 26]) It has also been argued that the prescription of an ineffective placebo in place of effective pain medication can act as a “suicidogen,” whereby an individual in pain who is given inadequate medication for relief may be prompted to hasten his/her death. ([6]) In the clinical setting, substitution of a placebo for an active pain medication, even with the consent of the patient, is clinically suspect because better treatment alternatives exist and there are risks associated with the use of placebos. It is therefore inappropriate to substitute a placebo for a medication known to be effective in the treatment of a patient with the verified pain of a terminal illness.

Additionally, placebos are associated with side effects ([3]) and potentially precipitate hyperalgesia ([27]) or withdrawal in patients previously treated with pain medications.

IV. Summary

Exquisite management of end-of-life pain is a medical imperative. Use of a placebo in place of known effective pain medication for determining whether the patient is really in pain is under no circumstances appropriate. Use of placebos does not meet the accepted criteria to diagnose substance **USE DISORDER** abuse, commonly referred to by some physicians as “addiction.” There is no medical justification for the use of placebos to assess or treat pain at end of life.

The only appropriate use of a placebo is in approved clinical research with informed consent.

SUBJECT: URINE DRUG SCREENING DURING PREGNANCY AND PERINATAL CARE

SUBMITTED BY: American Osteopathic Academy of Addiction Medicine

REFERRED TO: Committee on Professional Affairs

WHEREAS, early identification of substance use during pregnancy using a validated screening tool is essential to improving maternal and neonatal health outcomes; and

WHEREAS, substance use during pregnancy is best addressed through education, prevention, and evidence-based treatment; and

WHEREAS, routine and non-consensual urine drug testing during pregnancy is not a validated screening tool[1] and has well-documented limitations, including false positives, false negatives, and inability to diagnose substance use disorder; and

WHEREAS, results of urine drug tests do not indicate the capacity to parent, and mandatory reporting laws may cause unintended harm to mothers and newborns through criminalization, disruption of the family structure, and deterrence of prenatal care[2,3]; and

WHEREAS, Black and low-income individuals are disproportionately subjected to urine drug testing and thereby experience disproportionate harms associated with such testing[3-6] ; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports universal screening for perinatal substance use using validated screening tools; and, be it further

RESOLVED, that the AOA opposes routine and non-consensual urine drug testing as a screening tool during pregnancy; and be it further

RESOLVED that the AOA supports and promotes addressing substance use during pregnancy through education, prevention, and evidence-based treatment; and, be it further

RESOLVED, that the AOA opposes state and federal mandatory reporting legislation that permits urine drug test results to serve as the sole basis for suspected child abuse or neglect; and, be it further

29 RESOLVED, that the AOA ~~advocates for~~ **SUPPORTS** state and federal child
30 welfare laws and policies that rely on an osteopathic physician's clinical
31 judgment, assessment of maternal functional status, and infant health and
32 safety to report child protective concerns.

SUBJECT: SUPPORTING THE REESTABLISHMENT OF HEALTHCARE FACILITIES AS PROTECTED SPACES

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Committee on Professional Affairs

WHEREAS, the United States (U.S.) Department of Homeland Security (DHS) describes a “protected area” as a location that, based on the essential services or activities that occur there, is generally protected from immigration enforcement actions, which may include arrests, civil apprehensions, searches, inspections, seizures, service of charging documents, interviews, or enforcement surveillance[1]; and

WHEREAS, the DHS defines medical and mental health care facilities broadly to include hospitals, doctors’ offices, clinics, vaccination or testing sites, urgent care centers, sites serving pregnant individuals, and community health centers[1-2]; and

WHEREAS, in January 2025, DHS rescinded the 2021 memorandum, Guidelines for Enforcement Actions in or Near Protected Areas, allowing any law enforcement actions to occur in previously identified protected areas such as healthcare facilities, schools, and places of worship[3-4]; and

WHEREAS, the Health Insurance Portability and Accountability Act of 1996 (HIPAA)[5] establishes limitations on disclosure of protected health information to law enforcement, requiring compliance with specific legal standards and processes; and

WHEREAS, strict immigration policies and escalating immigration enforcement generate structural barriers to healthcare access and adversely affect the mental and physical health of all immigrant patients by decreasing access to and eligibility for care, worsening inequities, deterring health-seeking behaviors, and deepening mistrust in institutions[6-12]; and

WHEREAS, immigration policies that create fear or uncertainty among healthcare workers may threaten workforce stability, exacerbate staffing shortages, and undermine the ability of health care systems to provide consistent, high-quality patient care[13]; and

WHEREAS, inclusive, health-focused policies that protect clinical spaces positively influence social determinants of health, including trust, perceived safety, and equitable access to care[14]; now, therefore be it

31 RESOLVED, that the American Osteopathic Association (AOA) supports federal
32 policies that would reestablish healthcare facilities as protected areas in
33 order to ensure safe, uninterrupted access to medical care.

Explanatory Statement:
This resolution supports federal policies that would reestablish healthcare facilities as protected areas following the 2025 rescission of the Department of Homeland Security's Guidelines for Enforcement Actions in or Near Protected Areas. Clear protections for clinical settings reduce barriers to care, support compliance with patient privacy laws, and provide guidance for physicians navigating interactions with law enforcement. Reestablishing protected healthcare spaces also promotes workforce stability by reducing fear and uncertainty among healthcare workers, thereby supporting the delivery of safe, high-quality, and continuous patient care. This resolution aligns with existing AOA policy, including H209-A/22 and H628-A/25, and reinforces the osteopathic commitment to trust, access, and whole-person care.

SUBJECT: SUPPORT FOR THE CONTINUITY OF SNAP BENEFITS DURING GOVERNMENT SHUTDOWNS WHILE UPHOLDING PROGRAM INTEGRITY

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, the ~~Ohio~~ AMERICAN ~~Osteopathic Association (AOOA)~~ represents osteopathic physicians who are committed to whole-person care and the osteopathic principle that health is influenced by biological, psychological, and social factors [1]; and

WHEREAS, food insecurity is a significant Social Determinant of Health (SDOH) that negatively impacts physical health, mental health, chronic disease management, and health care utilization [2]; and

WHEREAS, the Supplemental Nutrition Assistance Program (SNAP) is a critical federal program that helps ensure food security for millions of low-income individuals and families, including children, elderly adults, and patients with chronic medical conditions [3]; and

WHEREAS, disruptions to SNAP benefits, including those that occurred during the 2025 United States Government shutdown, create immediate and harmful consequences for vulnerable patients, increase hunger, stress, and barriers to medical adherence [4]; and

WHEREAS, physicians across ~~Ohio~~ **THE UNITED STATES** directly witness the health consequences of interrupted access to nutrition, including worsening disease control, increased emergency department utilization, and preventable hospitalizations [5]; and

WHEREAS, maintaining public trust in SNAP requires strong program integrity, including appropriate safeguards to prevent fraud, waste, and abuse so that limited resources are preserved for individuals and families with legitimate need; now, therefore be it

RESOLVED, the American Osteopathic Association (AOA) ~~affirms it~~s support**S** ~~for~~ policies and efforts at the state and federal levels that prevent disruptions in Supplemental Nutrition Assistance Program (SNAP) benefits during government shutdowns or funding lapses, particularly for populations with significant Social Determinant of Health (SDOH) disparities; and, be it further

36 RESOLVED, that the AOA supports responsible efforts to reduce fraud, waste, and
37 abuse within SNAP to ensure that program funds remain available to
38 individuals and families in need of them.

7 RESOLVED, the Bureau on Federal Health Programs recommends the following
8 policy be SUNSET.

9 Policy Statement

10 The American Osteopathic Association (AOA) supports the collection of public
11 health data concerning firearm fatalities. The data points to be collected should be
12 separated into the following categories: homicides, including the number of
13 domestic violence homicides; suicides and accidents; and non-fatal firearm related
14 injuries. Within each category, the ages of the victims to be noted.

15 Additional data to be collected is the hospitalizations that occurred as a result of a
16 firearm that did not result in death and include the caliber of the firearm used.

17 The AOA will advocate to make this data publicly available and develop healthcare
18 guidance and inform public policy.

SUBJECT: AOA FIREARM POLICY ~~COMPENDIUM~~ - SOURCE: H409-A/21

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; therefore, be it

RESOLVED, that the Bureau on Federal Health Programs recommends the following policy be REAFFIRMED AS AMENDED.

Policy Statement

The American Osteopathic Association (AOA) is dedicated to reducing the impact of violence on health and wellness in our communities, including injury and death that result from firearm violence. As physicians, we see firsthand the consequences of violence to victims and their families. The AOA recognizes that laws, regulations, and policies have the potential to decrease the occurrence of violence, especially firearm violence, in our communities.

The AOA House of Delegates adopts the following stance on firearm education, research, and policy.

Education

The American Osteopathic Association (AOA) recommends that when appropriate, physicians ask patients and/or caregivers about the presence of firearms in the home and counsel patients who own firearms about the potential dangers inherent in gun ownership, especially if vulnerable individuals, children and adolescents are present. The AOA recommends strategies such as secure storage and the use of safety locks to eliminate inappropriate access to firearms by vulnerable individuals, children and adolescents and recommends all physicians educate families on the safe use and storage of firearms and non-powdered guns safety and the inherent risk, benefits and responsibility of ownership. ***[Editor's Note: Non-powdered guns are defined as: BB, air and pellet guns, expelling a projectile (usually made of metal or hard plastic) through the force of air pressure, CO2 pressure, or spring action. Non-powder guns are distinguished from firearms, which use gunpowder to generate energy to launch a projectile.]***

Research

The American Osteopathic Association (AOA) is dedicated to preventing violence in our communities, especially the increased prevalence of firearm violence. As physicians, we see first-hand the devastating consequences of violence to victims

and their families. The AOA recognizes that laws, regulations, and policies have the potential to decrease the occurrence of violence, especially firearm violence, in our communities. The AOA (1) supports funding for the Centers for Disease Control and Prevention (CDC), the National Institutes of Health (NIH) and other research entities to conduct research on firearm violence and to provide recommendations on reducing firearm violence; (2) supports the collection of public health data concerning firearm fatalities separated by homicides, including the number of domestic violence homicides, suicides and accidents, and non-fatal firearm related injuries, further separated by the ages of victims of each category, and hospitalizations that occurred as a result of firearm that did not result in death and the caliber of firearm used. The AOA supports such data be publicly available to inform the development of guidance and public policy.

Policy

The American Osteopathic Association supports legislation that (1) labels gun violence as a national public health issue; (2) funds appropriate research on gun violence as part of future federal budgets; (3) establishes constitutionally appropriate restrictions on the manufacturing and sale, for civilian use, of large-capacity magazines and firearms with features designed to increase their rapid and extended killing capacity; (4) requires comprehensive background checks for all firearm purchases, including sales by gun dealers, sales at gun shows, and online sales for purchase, which does not extend to firearms transfers between family members or firearms attained through inheritance; and (5) requires firearm safety training, including military or law enforcement training, as a condition to purchase any class of firearms.

The American Osteopathic Association opposes public policy that mandates reporting of information regarding patients and gun ownership or use of guns except in those cases where there is duty to protect, as established by the Tarasoff ruling, for fear of degrading the valuable trust established in the physician-patient relationship.

The American Osteopathic Association (AOA) is opposed to governmental actions and policies that limit the rights of physicians and other health care practitioners to inquire of their patients whether they possess firearms and how they are secured in the home or to counsel their patients about the potential dangers of firearms in the home and safe practices to attempt to avoid those potential dangers. The AOA opposes legislation or initiatives advocating physician gag rules that limit physicians' right to free speech or other rights.

The American Osteopathic Association supports the position that persons accused of a crime involving a firearm be prosecuted to the full extent of the law.

~~Referred Resolution Firearm Policy Compendium~~

~~Policy Statement~~

~~The American Osteopathic Association (AOA) House of Delegates adopts the attached policy compendium, which includes all current American Osteopathic Association policies relating to firearm violence.~~

~~AOA Policy Compendium – Firearm Policy~~

~~Introduction~~

~~The American Osteopathic Association (AOA) is dedicated to reducing the impact of violence on health and wellness in our communities, including injury and death that result from firearm violence. As physicians, we see firsthand the consequences of violence to victims and their families. The AOA recognizes that laws, regulations, and policies have the potential to decrease the occurrence of violence, especially firearm violence, in our communities.~~

~~The 2019 AOA House of Delegates (HOD) adopted a resolution, H437-A/19, Firearm Violence, which states that the AOA *"will develop a comprehensive policy which consolidates all current firearm violence policies into a single unified policy and present it for consideration by the 2020 AOA House of Delegates."* In response to the adoption of this policy, the Bureau on Federal Health Programs (BFHP) concluded that having a broad array of policies on a given topic allows AOA staff to accurately respond to federal and regulatory concerns. With nuanced policy to reference, the bureau determined that the best approach to implementing this policy is to develop a comprehensive document that includes all current AOA policies relating to firearm violence. This approach is also intended to preserve any relevant background and history of individual resolutions and avoid any potential impediments to future policy changes.~~

~~The BFHP submitted a white paper to the 2020 HOD in response to the direction provided in H437-A/19 that included an overview of AOA firearm policy through 2019. Questions were raised by delegates at the 2020 HOD regarding the scope of the document submitted and whether more current data was available, and it subsequently was referred back to the BFHP. In response to this referral, the BFHP has updated its research; firearms resolutions adopted by the 2020 HOD along with updated federal statistics and citations are included in this compendium.~~

~~Background~~

~~Much of the AOA's policy is predicated on an understanding of the role of firearms on public health in the United States. According to the Centers for Disease Control and Prevention (CDC), firearm-related deaths in the U.S. reached a twenty year high in 2017[i]. In 2018, there were 39,740 firearms-related deaths in the U.S., with 109 people dying from firearm-related injury each day[ii]. The CDC estimates that 6 in 10 of these are suicide and 3 in 10 are homicide[iii]. Additionally, in 2018, more U.S. deaths were attributed to firearms than motor vehicle accidents[iv].~~

~~An analysis of 2010 data showed that the U.S. had the highest rate of firearm-related violence, suicides, and accidents among industrialized countries[v]. Beyond the impact on~~

~~the health and well-being of Americans, there is an economic impact, with gun violence in the U.S. costing $229 billion in 2015[vi].~~

~~Policies Preserving the Ability of Physicians to Educate and Counsel their Patients on Firearm Violence~~

~~Preserving the rights of physicians and other health care professionals to counsel patients on prevention, including the prevention of injury or death, as a result of firearms is critical. Physicians play an important role in preventing firearm injuries through health screenings, patient counseling, and referral to mental health services.~~

~~Current Resolutions on Firearm Education:~~

- **~~H425-A/19 FIREARM SAFETY~~**

~~The American Osteopathic Association (AOA) recommends that when appropriate, physicians ask patients and/or caregivers about the presence of firearms in the home and counsel patients who own firearms about the potential dangers inherent in gun ownership, especially if vulnerable individuals, children and adolescents are present. The AOA recommends strategies such as secure storage and the use of safety locks to eliminate the inappropriate access to firearms by vulnerable individuals, children and adolescents and recommends all physicians educate families on the safe use and storage of firearms. 1994; revised 1999, 2004; reaffirmed 2009; 2014; reaffirmed as amended 2019~~

- **~~H418-A/20 FIREARMS AND NON-POWDERED GUNS – EDUCATION FOR USERS~~**

~~The American Osteopathic Association supports education involving firearm and non-powdered guns safety and the inherent risk, benefits and responsibility of ownership. 1990; reaffirmed 1995, 2000, 2005; revised 2010; revised 2015; adopted as amended 2020~~
~~[Editor's Note: Non-powdered guns are defined as: BB, air and pellet guns, expelling a projectile (usually made of metal or hard plastic) through the force of air pressure, CO2 pressure, or spring action. Non-powder guns are distinguished from firearms, which use gunpowder to generate energy to launch a projectile.]~~

- **~~H340-A/16 PHYSICIAN GAG RULES – OPPOSITION TO~~**

~~The American Osteopathic Association (AOA) is opposed to governmental actions and policies that limit the rights of physicians and other health care practitioners to inquire of their patients whether they possess guns and how they are secured in the home or to counsel their patients about the potential dangers of guns in the home and safe practices to attempt to avoid those potential dangers. The AOA opposes any further legislation or initiatives advocating physician gag rules that limit physicians' right to free speech or other rights. 2016~~

- **~~H428-A/19 PHYSICIAN-PATIENT RELATIONSHIP AS RELATED TO PROPOSED GUN CONTROL LAWS, PROTECTION OF THE~~**

157 ~~While the American Osteopathic Association supports measures that save the community~~
158 ~~at large from gun violence, the AOA opposes public policy that mandates reporting of~~
159 ~~information regarding patients and gun ownership or use of guns except in those cases~~
160 ~~where there is duty to protect, as established by the Tarasoff ruling, for fear of degrading~~
161 ~~the valuable trust established in the physician-patient relationship. 2013; reaffirmed 2019~~

162 ~~**Policies on Advancing Research to Reduce Firearm Violence**~~

163 ~~Advancing research to reduce firearm violence is a public health issue that deserves the~~
164 ~~allocation of appropriate resources. The AOA supports funding for the Centers for Disease~~
165 ~~Control and Prevention (CDC), the National Institutes of Health (NIH), and other research~~
166 ~~entities, to conduct research on firearm violence and to provide recommendations on~~
167 ~~reducing firearm violence.~~

168 ~~**Current Resolutions on Firearm Research:**~~

169 ~~• **H442-A/20 FIREARM VIOLENCE**~~

170 ~~The American Osteopathic Association (AOA) (1) supports the federal government's~~
171 ~~January 2013 clarification, "that no federal law in any way prohibits doctors or other health~~
172 ~~care providers from reporting their patients' threats of violence to the authorities, and~~
173 ~~issuing guidance making clear that the Affordable Care Act does not prevent doctors from~~
174 ~~talking to patients about gun safety"; (2) supports funding for the Centers for Disease~~
175 ~~Control and Prevention (CDC), the National Institutes of Health (NIH) and other research~~
176 ~~entities to conduct research on firearm violence and to provide recommendations on~~
177 ~~reducing firearm violence; (3) supports promotion of policies that will increase access to~~
178 ~~mental health services and for the appropriate coverage of mental health services by~~
179 ~~public and private health care programs; and (4) encourages enhanced education of gun~~
180 ~~safety and safe handling of firearms; and (5) approves the attached Policy Statement on~~
181 ~~Firearm Violence. 2013; revised 2015; adopted as amended 2020~~

182 ~~**AOA Policy Statement – Firearm Violence**~~

183 ~~The American Osteopathic Association (AOA) is dedicated to preventing violence in our~~
184 ~~communities, especially the increased prevalence of firearm violence. As physicians, we~~
185 ~~see first-hand the devastating consequences of violence to victims and their families. The~~
186 ~~AOA recognizes that laws, regulations, and policies have the potential to decrease the~~
187 ~~occurrence of violence, especially firearm violence, in our communities. The AOA~~
188 ~~supports:~~

189 ~~Preserving the Ability of Physicians to Educate and Counsel their Patients on Firearm~~
190 ~~Violence~~

191 ~~Preserving the rights of physicians and other health care professionals to counsel patients~~
192 ~~on prevention, including the prevention of injury or death as a result of firearms, is critical.~~
193 ~~Physicians play an important role in preventing firearm injuries through health screenings,~~
194 ~~patient counseling, and referral to mental health services. The AOA supports the~~
195 ~~administration's January 2013 clarification, "that no federal law in any way prohibits~~

~~doctors or other health care providers from reporting their patients' threats of violence to the authorities, and issuing guidance making clear that the Affordable Care Act does not prevent doctors from talking to patients about gun safety." We must ensure that no federal or state law hinders, restricts, or criminalizes the patient-physician relationship.~~

~~Advancing Research to Reduce Firearm Violence~~

~~Advancing research to reduce firearm violence is a public health issue that deserves the allocation of appropriate resources. The AOA supports funding for the Centers for Disease Control and Prevention (CDC), the National Institutes of Health (NIH), and other research entities to conduct research on firearm violence and to provide recommendations on reducing firearm violence.~~

~~Improving Access to Mental Health Services and Resources~~

~~Improving access to mental health services and resources is essential to reducing firearm violence. The AOA supports promotion of policies that will increase access to mental health services and for the appropriate coverage of mental health services by public and private health care programs. Access to mental health services and resources for young adults should be a priority. The early identification of diagnosable mental health issues and subsequent treatment is vital to reducing firearm violence.~~

- ~~**H630-A/18 COMPREHENSIVE GUN VIOLENCE REFORM**~~

~~The American Osteopathic Association joins like-minded organizations in the call for Congressional legislation that:~~

1. ~~Labels gun violence as a national public health issue.~~
2. ~~Funds appropriate research on gun violence as part of future federal budgets.~~
3. ~~Establishes constitutionally appropriate restrictions on the manufacturing and sale, for civilian use, of large-capacity magazines and firearms with features designed to increase their rapid and extended killing capacity. 2018~~

~~**Additional Policies Supporting Reduced Firearm Injury**~~

- ~~**H318-A/16 FIREARMS – COMMISSION OF A CRIME WHILE USING A FIREARM**~~

~~The American Osteopathic Association supports the position that persons accused of a crime involving a firearm be prosecuted to the full extent of the law. 1994; revised 1996, 2001; reaffirmed 2006; reaffirmed as amended 2011; reaffirmed 2016~~

- ~~**H446-A/20 BACKGROUND CHECKS AND FIREARMS SAFETY TRAINING AS A CONDITION OF FIREARMS PURCHASE**~~

~~The American Osteopathic Association (AOA) recognizes public health data demonstrating the impact of firearms on mortality and wellness in the United States and will support federal legislation requiring comprehensive background checks for all firearm purchases, including sales by gun dealers, sales at gun shows, and online sales for purchase, which does not extend to firearms transfers between family members or firearms attained through inheritance; and the AOA will support efforts to require firearms safety training, including military or law enforcement training, as a condition to purchase any class of firearms. H421-A/15 is superseded by this resolution. adopted 2020~~

~~Conclusion~~

~~As noted above, the AOA House of Delegates adopted a policy in 2019 that calls for the identification of all current firearm violence policies in a single document. This compendium reflects that policy and highlights the wide range of issues addressed in AOA firearm policies which includes eight individual policies. At least two resolutions (H425-A/19 and H418-A/20) support education and recommend safety precautions for gun owners. One (H340-A/16) opposes any governmental action that would limit the right of physicians to discuss with their patients the topic of responsible gun ownership and safe storage. Another (H428-A/19) opposes any mandated reporting of patient gun ownership. Two policies (H442-A/20 and H630-A/18) support federal funding for research on firearm violence. H630-A/18 also labels gun violence as a national public health issue and supports federal legislation that would establish constitutionally appropriate restrictions on the manufacturing and sale of certain classes of firearms. Lastly, H446-A/20 supports federal legislation requiring comprehensive background checks for firearms as well as efforts to require firearm safety training.~~

~~There is a separate and distinct focus in most of these policies, with covered issues ranging from education, to protecting the rights of physicians, support for research, and support for certain restrictions on sales. As such, these policies, as well as any future firearm-related policies, should be maintained and taken up for review and reconsideration by the House of Delegates on an individual basis.~~

~~Source: H409-A/21~~

~~Status: 2021~~

Explanatory Statement:
Per the direction of the House of Delegates, all previous firearm policies have been consolidated into a single unified policy in the proposed substitute amendment, AOA Firearm Policy. This policy consolidates into a single unified policy ***H-420/A21 Collection of Health Data Concerning Firearm Fatalities*** and ***H-409/A21 AOA Firearm Policy Compendium***, which superseded the following policies:

- H-425/A19 Firearm Safety
- H-418/A20 Firearms and Non-powdered Guns – Education for Users
- H-340/A16 Physician Gag Rules – Opposition to
- H-428/A19 Physician-Patient Relationship as Related to Proposed Gun Control

Laws, Protection of the
- H-442/A20 Firearm Violence
- H-630/A18 Comprehensive Gun Violence Reform
- H-318/A16 Firearms – Commission of Crime While Using Firearm
- H-446/A20 Background Checks and Firearms Safety Training as a Condition of Firearms Purchase

SUBJECT: PHYSICIAN COMPARATIVE UTILIZATION & PROFILING - SOURCE: H438-A/21

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and determined that it remains relevant; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED.

Policy Statement

The American Osteopathic Association (AOA) adopts the following principles on physician comparative utilization and physician profiling.

The physician comparative utilization, rating, and profiling programs should exclusively use metrics that are developed with physician involvement. Where possible, measure sets and/or data points should be evidenced-based and vetted by relevant physician specialty or professional societies. The measure constructs should be evaluated on a timely basis to reflect validity, reliability and impact on patient care. Additionally, all evidenced-based measures should be reviewed in light of evolving evidence to maintain the clinical relevance of all measures.

Comparative utilization, profiling, and rating should only occur once data has been acquired from a statistically significant sample of a physician's patient population which has been risk adjusted.

Comparisons between physicians should be based on geographic/demographic (rural, urban, suburban) comparisons of similar practice specialty.

Anonymous patient satisfaction data, whether in a formal profiling program or through an informal consumer website, should be excluded.

Physicians should have the opportunity to review any data or rating for accuracy and be afforded the right to request changes to inaccurate information in advance of the publication of that data. All methodologies, including those used to determine case identification and measure definitions, should be transparent and readily available to physicians.

28 If comparative utilization or physician profiling data were to be made public, only
29 measures that are deemed sensitive and specific to the care being delivered are
30 used and appropriate context and methodology are shared with the public.

31 The physician rating and profiling program(s) should not adversely impact the
32 physician-patient relationship or unduly intrude upon physicians' medical judgment.

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED AS AMENDED**.**

Policy Statement

~~The American Osteopathic Association (AOA) approves the Youth Concussion and Return-to-Play white paper and its position on concussion, return-to-play and return-to-learn.~~

~~**Youth Concussion and Return-To-Play White Paper**~~

~~Since 2009, every state has passed some form of legislation to address concussion safety in youth athletics. Most states' laws address the following five common areas:~~

~~1. Parent and student education,~~
~~2. Parent and student signature requirements,~~
~~3. Coach training, removal and return-to-play [RTP],~~

~~4. Return-to-learn [RTL] and~~
~~5. Clearing provider types~~

~~State laws vary, however, in the precise degree of detail and rigor of their respective requirements. The American Osteopathic Association (AOA) is committed to helping states work to address this public health risk by providing evidence-based guidance on concussion as a part of the spectrum of Traumatic Brain Injuries (TBIs), as well as RTP and RTL protocols for youth athletes. We support policies that are backed by current scientific evidence, with appropriate clarification regarding the definitions of terms and protocols. The AOA believes that allopathic and osteopathic physicians (MDs and DOs) possess the complete medical knowledge and training needed to recognize and diagnose the subtle, varying and evolving symptoms of concussion, but that coordination across all levels of the physician-led team is imperative for timely evaluation and intervention, and appropriate follow-up care. In order to ensure the appropriate level of care, team physicians should possess up- to-date documentation of knowledge, skills and experience in this area of medicine. The goal of this paper is to encourage greater consistency among the terminology used by health care organizations, and to utilize current evident to help states create a standardized approach to concussion, RTP and RTL.~~

~~Background~~

~~In recent years, a consensus has emerged among the scientific community that head injuries resulting from contact sports, including football, soccer, boxing, ice hockey and others, can have devastating long-term effects.[1] Among the consequences of repeated head injuries are headache, dizziness, difficulty concentrating or completing tasks, and in some cases, increased risk of depression and suicide.[2] Children and teenagers are especially susceptible to concussion-related injuries, because their brains lack the coating and insulation of adult brains and their heads are relatively heavy, and necks weak, compared to adults.[3] Thus, children are at risk of sustaining more serious brain injuries than adults when exposed to the same amount of force. According to the CDC, the number of TBI-related emergency department visits among youth doubled from 2002 to 2010, from approximately 500 to 1,000 per 100,000 people.[4] Further, female athletes appear to be more susceptible to sustaining concussions than males.[5]~~

~~To address this issue, all states have now implemented some form of concussion and RTP legislation. The National Center for Injury Prevention and Control (NCIPC) conducted a case study on two states that were early implementers of these laws, Washington and Massachusetts, to evaluate differences in their laws and approaches to addressing youth sports-related injuries.[6]~~

~~Washington became the first state to implement a concussion law with the passage of the "Zackery Lystedt Law" in May 2009.[7] This law mandates that~~

~~youths suspected of having sustained a head injury or concussion should be removed from competition, and returned to play *only* after an evaluation and written medical clearance from a "licensed health care provider* trained in the evaluation and management of concussion."[8] The law requires individual school districts to develop information to educate youth athletes, their parents and coaches about the nature and risk of concussions, but it does not provide any specific requirements for the content of those guidelines. The law does not require any coach training, and students are not required to complete concussion history forms.~~

~~Massachusetts' law, by contrast, requires stakeholder groups including parents, coaches, trainers, school athletic directors and school-employed physicians and nurses to participate in an athletic head injury safety training program developed by the Department of Public Health.[9] It directs the Department to utilize materials from the Centers for Disease Control and Prevention to create the program, which shall include (1) current training in recognizing the symptoms of concussions and~~

~~(2) providing students who participate in athletic activities a summary of the medical protocol for recognizing concussion symptoms, a protocol for post-concussion participation in athletics, and the short- and long-term consequences of concussions. It requires schools to implement an RTP protocol containing 17 specific items including procedures for medical review of all concussion history forms and plans for gradual RTP following injury. It also mandates that schools establish their own RTP protocol implementation teams. The law requires students to provide information about their concussion and head injury history at the start of each sports season on a form that must be signed by the student and their parent or guardian and forwarded to their coach(es). A student who becomes unconscious or is suspected of having suffered a concussion must be~~

~~* Licensed Health Care Provider is undefined by the law, and may be a volunteer removed from practice or competition and not returned to the practice or competition during which the concussion or suspected concussion occurred. The student may only return to subsequent athletic activities with the written clearance of a physician, neuropsychologist, certified athletic trainer or other "appropriately trained or licensed health care professional as determined by the Department of Public Health."~~

~~Numerous state laws in addition to Massachusetts' include athletic trainers and nurses among the "clearing provider types" who may allow a youth to return to athletic activity following a concussion. Forty-nine states (with the exception of California) license and regulate athletic trainers, and all require that certified athletic trainers work within their state practice act under the direction of a physician. All forty-nine states recognize certification by the National Athletic Trainers' Association, which will soon increase the minimum education required for certification from a bachelor's degree to a master's degree from an accredited professional athletic training education program.[10] Graduates must then pass a comprehensive examination, and meet ongoing continuing education requirements. Education programs include training in the identification of signs, symptoms, interventions and RTP criteria for brain injury including concussion, but continuing education requirements vary widely (some states require concussion management as a part of these continuing education requirements, while others do not).[11, 12, 13]~~

~~While all states license and regulate nurses, nursing education varies more widely and concussion education is not mandatory. The National Association of School Nurses (NASN) recommends a four-year bachelor's degree and registered nurse (RN) certification as the minimum standard for a school nurse.[14] The NASN has issued a position statement on the importance of the school nurse on the concussion management team; however, the RN examination does not include concussion among the list of topics and not all states require continuing education for nurses.[15, 16] As athletic trainers and school nurses are frequently on the front lines of youth concussion evaluation and management, more robust state education and training requirements are needed to ensure that these health care professionals receive current, evidence-based training in this area, particularly when these providers are listed among the state's "clearing provider types."~~

~~Washington and Massachusetts' laws illustrate the wide variation in approaches that states have taken to attempt to address concussion among student athletes, and while all 50 states now possess similar laws, these laws differ significantly in their provisions. Several physician specialty organizations have examined this issue, and published position statements which include evidence- based guidance for states.~~

~~The American Osteopathic Academy of Sports Medicine (AOASM), as a contributing author on the 2013 paper *Concussion and the Team Physician: A Consensus Statement (TPCC)*, which is still current, advocated for on-field and sideline protocols such as neurological assessments and a plan for post-injury follow-up, as well as post-game-day evaluation and treatment.[17] AOASM, via the *TPCC*, urged guidelines that encourage individualized RTP decisions not based on a rigid timeline, with the physician ultimately bearing responsibility for making the decision. The paper also advocates that treating physicians should understand the complications of concussion, including that cumulative concussions may increase subsequent risk for concussion, and other neurological and physical symptoms. Physicians should also understand prevention principles, including helmet use and the utility of educating athletes, parents and coaches about concussion risks in advance.~~

~~The Centers for Disease Control and prevention (CDC) published guidelines on the diagnosis and management of mild traumatic brain injury among children in 2018.[18] "recommendations from the CDC pediatric TBI guidelines include:~~

1. ~~Do not routinely image patients to diagnose TBI.~~
2. ~~Use validated, age-appropriate symptom scales to diagnose TBI.~~
3. ~~Assess evidence-based risk factors for prolonged recovery.~~
4. ~~Provide patients with instructions on return to activity customized to their symptoms.~~
5. ~~Counsel patients to return gradually to non-sports activities after no more than 2-3 days of rest."~~

~~The CDC has also developed an educational program called "heads up: concussion in youth sports."[19]~~

~~The American Academy of Neurology (AAN) has a position statement on sports concussion (2020) called concussion policy for youth and high school sports.[20] the AAN supports educational resources such as the CDC'S heads up: concussion in youth sports online training course for coaches and parents and processes to confirm that the education is understood by parents and athletes. The AAN supports removal from participation for any athlete who is exhibiting symptoms or signs of a concussion until they are evaluated by a qualified healthcare provider properly trained in the assessment and management of concussion, such as a neurologist and as defined by state law. AAN recommends that student athletes should not return to athletic competition until the signs and symptoms of concussion have resolved and have been cleared by a qualified healthcare professional trained in the management of concussion, such as a neurologist. Student athletes should return to full academic participation before returning to competition.~~

[20] AAN position: sports concussion 2020. available at https://www.aan.com/policy-and-guidelines/policy/position-statements/sports-concussion.

~~The American Medical Society for Sports Medicine (AMSSM) recently published an update to their 2013 position statement on concussion in sport in 2019.[21] AMSSM recommends that any athlete suspected of having a concussion be removed from the activity and assessed by a licensed healthcare provider trained in the evaluation and management of concussions "reasons for immediate removal and prompt evaluation include loss of consciousness (LOC), impact seizure, tonic posturing, gross motor instability, confusion, or amnesia. Any of these reported or observed signs should result in removal from practice or competition for at least the rest of the day." Since concussions can cause changes in attention, learning, and short-term memory that make learning difficult, return to learn should be coordinated with school personnel to quickly implement a school support plan without delay. AMSSM recommends that "concussion-related symptoms and signs should be resolved before returning to sport. A return-to-play progression involves a gradual, stepwise increase in physical demands and sport-specific activities without return of symptoms before the final introduction of exposure to contact."~~

~~The American Academy of Pediatrics (AAP) updated their clinical report on sport-related concussion in children and adolescents in 2018.[22] AAP recommends that "testing after a sport-related concussion should be performed and conducted by providers who have been trained in the proper administration and interpretation of the tests." All athletes with a suspected concussion should be immediately removed from play. They should not return to full sports participation until they have completed a return-to-sport progression without a return of concussion symptoms. Health care providers should be aware of their state's laws regarding return to play after a concussion.~~

~~[22] HALSTEAD ME, WALTER KD, MOFFATT K. SPORT-RELATED CONCUSSION IN CHILDREN AND ADOLESCENTS. PEDIATRICS. 2018; 142(6):e20183074.~~

~~As the above position statements demonstrate, there is a need for a stronger, unified voice from the medical community in order to provide state legislatures with the best tools and up-to-date guidance as they work to combat this public health concern. The AOA believes that emphasizing the physician-led, team-based model of care, where licensed health care providers at all levels possess current education and training in concussion management, will ensure that medical professionals with comprehensive knowledge of scientific evidence and advancements are appropriately involved in patient care.~~

~~AOA Policy Development~~

~~Strong evidence of the serious, negative long-term health effects of concussions underscores the need to create policy in this AREA to help guide osteopathic advocacy in response to current and proposed state legislation. Unified, evidence-based advocacy from medical groups, including the AOA, will benefit states as they update their concussion and RTP laws, which currently vary widely.~~ The AOA adopts the following policy statements as its official position on concussion, **RETURN-TO-PLAY (**RTP**)** and **RETURN-TO-LEARN (**RTL**)** and encourages states, as well as schools, sports clubs and professional leagues to develop official rules that promote education and prevention of **TRAUMATIC BRAIN INJURIES (**TBIs**)** by incorporating these tenets:

1. **Parent and Student Education.** The AOA believes that educating students, parents and guardians about the nature, symptoms, risks and short- and long-term health effects of concussions and **TBIS** ~~traumatic brain injuries~~ will improve student safety by increasing awareness of concussion warning signs and allowing for early treatment. This has been shown to decrease the risk of subsequent injuries during recovery and improve long-term outcomes. Education should also include clarification of the RTP and RTL processes. The AOA believes that all schools and youth athletic organizations should disseminate evidence-based teaching tools such as those issued by the Centers for Disease Control (CDC), **NATIONAL CENTER FOR** Sports Safety ~~International~~ (**NCSS**~~SSI~~), certain state members of the Brain Injury Alliance (BIA) or other nationally recognized health or medical organizations to students, parents and guardians prior to the start of every school year or athletic season.~~23~~[1,2]

2. **Parent and Student Signature.** The AOA supports requiring signatures from parents/ guardians and students on an information sheet acknowledging that they have received the aforementioned education and been made aware of the risks of concussion inherent in athletic activities, and understand appropriate steps for concussion evaluation and management, prior to every school year or athletic season.

3. **Coach/Official Training.** The AOA encourages states to adopt mandatory annual training for coaches, athletic directors, school nurses and other school and youth sports officials based upon materials published by the CDC, **NCSS**~~SSI~~, BIA or other nationally recognized health or medical organizations.[3]

Training should emphasize prevention as well as the need for early identification of concussions and improve**D** treatment and management strategies, with an emphasis on prohibiting same-day return-to-play for concussed athletes in all circumstances and requiring clearance from a physician (as defined elsewhere in AOA policy) prior to allowing a concussed athlete to return to athletic activity.

4. **Removal and Return-to-Play.** The AOA believes that it is vital that youth suspected of having sustained a concussion be removed from practice or competition immediately, and examined by a member of the physician-led team who is a licensed health care provider (LHCP) with documentation reflecting current concussion training, whose scope of practice includes the evaluation and management of concussions. The AOA supports the use of baseline testing conducted by a trained health care professional prior to the start of each athletic season or school year to assess a youth's balance and cognitive function as well as the presence of any concussion symptoms.[~~25~~] At the time of a suspected concussion, results from this baseline testing can be compared to results from post-concussive testing again assessing balance and cognition. If the provider suspects a possible concussion, the athlete should be evaluated by a physician immediately. There should be no same-day return-to-play for athletes diagnosed with a concussion, and no subsequent return-to-play without written clearance by a physician with documented current concussion training. For students diagnosed with a concussion, examining physicians should work with parents/guardians, coaches, athletic trainers and other stakeholders on ongoing concussion management and gradual RTP and RTL for the student athlete. The examining physician should also coordinate with a multi-disciplinary team that may include physical therapists, occupational therapists, neuropsychologists, cognitive rehabilitation specialists and certified athletic trainers, among others, as the patient recovers from suffering from a concussion.

5. **Clearing Provider Type.** The AOA believes a LHCP member of the physician-led team who is trained in the evaluation and management of concussions, such as a certified athletic trainer or school nurse, may conduct a sideline assessment. If a youth's sideline assessment indicates a possible concussion, the youth must be evaluated by an allopathic or osteopathic physician with expertise in concussion management, who shall establish a clinical diagnosis. Proof of this expertise may include concussion training in sports medicine fellowship, or documentation of course completion in a recognized concussion course such as one from the CDC or **NCSS**~~SSI~~. Physicians possess the most comprehensive education and training of any health care provider, which enables them to recognize the variable and often subtle signs of concussion. The evaluating physician shall create a treatment plan and work with other members of the physician-led team to implement it, and the youth may only return to athletic activity with written clearance from the evaluating physician.

6. **Return-to-Learn.** The AOA recommends that the evaluating physician work

with school officials to implement an RTL protocol for students following a concussion. The physician may adjust the protocol with school officials as the patient's symptoms evolve and gradually improve, usually within one to three weeks after the injury. Each concussion is an individualized entity, however, and as such should be treated by the physician on an individualized basis with the physician making the deciding determination regarding RTL. The physician should communicate the importance of cognitive rest following a concussion to parents and school officials, emphasizing that a student may require a lighter workload, exemption from classes that appear to exacerbate concussion symptoms, and/or testing extensions until symptoms improve or disappear.

SUBJECT: RECOMMENDATIONS FOR IMPROVING PHYSICIAN SUPPLY IN RURAL, UNDERSERVED UNITED STATES - SOURCE: H439-A/21

SUBMITTED BY: Council on State Health Affairs

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant; now, therefore be it

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED.

Policy Statement

The American Osteopathic Association will work toward improving rural physician supply and monitor the potential for nationwide implementation of the following recommendations:
Recommendations for Improving Physician Supply in Rural Underserved America

1. Support Practice Incentive / Benefit and Other Recruitment Programs
   - Federal and state rural practice incentive/benefit programs should be sufficiently funded to be successful in recruiting and retaining physicians in rural, underserved communities.
   - Physicians, medical students and residents should have easy access to information about rural practice incentive programs. Further, the programs should be widely publicized by state authorities, and application forms readily accessible and user friendly.
   - Area Health Education Centers need to be adequately funded through federal and state funding sources to: a) provide recruitment and retention services in rural areas; b) assist in locating reasonable housing for student and resident preceptorships; and c) provide practice support services to providers and communities, as referenced in other principles listed herein.
   - Incentives should be developed by state authorities to encourage physicians to add a secondary, part-time practice in rural, underserved communities located within a reasonable distance of their primary practice site. ~~Physicians are encouraged to consider hiring and supervising mid-level practitioners, as appropriate, to augment their secondary practices.~~

- Physicians are urged to adopt telemedicine services in their practices as outreach to patients in underserved communities, within the scope of their licensure and receive appropriate payment, when applicable and purposeful in meeting health care needs.
- Physicians should be informed of the potential impact of the employed-practice model on their scope of practice before signing hospital employment contracts, including resources provided

2. Support Promotion of Rural Practice
    - Information on rural physician shortage areas should be readily available through coordinated websites of state agencies, area health education centers, practicing physicians, medical students, and residents seeking rural practice opportunities, ~~as well as to~~ **AND** underserved communities. To assist physicians in selecting practice opportunities, comprehensive community profiles should be compiled to identify characteristics and statistics such as: population demographics {percentage child-bearing (for obstetrical needs), aged (for adult medicine-needs), etc.}, insurance status, supply of physicians and other health professionals, degree of physician shortage, socioeconomic status, as well as educational and recreational opportunities.
    - Physicians who locate to rural areas, as well as medical students and residents interested in locating to rural areas, should be informed by state and/or local authorities of benefits and incentives available to strengthen the financial viability of their practice, including Medicare bonus payments, recruitment assistance, publicly funded locum tenens programs, tax credits, loan repayment opportunities, etc. Further, they should be informed of the health care infrastructure in their area, including systems of care such as federally qualified health centers, indigent care clinics, rural health clinics, hospitals (including Critical Access Hospitals), long term care facilities, emergency medical services, and hospice. They should also be informed about the availability of other health providers and services such as nursing, pharmacies, therapists, medical equipment, etc.
    - County medical societies, hospitals, and other health facilities (when available) should facilitate communication between new physicians and physicians with established practices in the community to help new physicians be better prepared for entering practice in an underserved community.
    - Physicians ~~who receive benefits through state loan repayment programs~~ should ~~also~~ be informed by state authorities of specialized practice support services, including practice start-up, billing, locum tenens, professional development and CME, staff recruitment and training, telemedicine, etc.
    - Physician practice re-entry programs should be widely publicized and monitored to assess their ability to meet demands by state authorities. Further, when physicians allow their medical license to lapse, they should be informed by the relevant state licensing authority of the potential

obstacles to re-licensure should they decide to re-enter practice following an extended absence from practice.

- Outreach should be provided by state authorities, to physicians without a full-time medical practice to promote volunteer work or part-time practice at clinics in underserved communities.
- Federal and state policies that impact rural medicine, e.g., payment policies, should be monitored for their potential impact on the viability of rural practices. The American Osteopathic Association should continue to advocate for payment parity between Medicaid and Medicare.
- Physicians in practice and those in training programs should be informed by state authorities, of special state medical licensing provisions applicable for practice in rural, underserved areas.

3. Support for Preparing Physicians for Rural Practice
    - Medical schools and residency programs should be incentivized by state authorities to develop and adequately support rural education and training tracks. Examples:
        a. Bonuses for medical students or residents who participate in rural training tracks; and
        b. Additional state formula funding for medical student and residents in rural training tracks.
    - Appropriate criteria should be used by Post-Doctoral training programs for identifying student-applicants and residents most likely to be successful in rural practice.
    - To measure outcomes, assessments should be conducted to identify whether students and residents who participate in rural educational or training tracks are retained in the state for practice after completion of training.
    - Area health education centers should offer opportunities for community physicians who volunteer as preceptors to access information and knowledge of practices that contribute to a positive clinical learning experience. Further, educational institutions should provide adequate support and incentives to recruit and retain physician preceptors, including appropriate levels of recognition and benefits for their teaching efforts. This will become increasingly important as community physicians face continuing pressures to increase productivity.
    - Medicare GME policies should allow for residency program-specific support rather than institutional support for resident training to allow GME funding to follow the resident throughout their training.
    - The Accreditation Council for Graduate Medical Education should consider allowing more flexibility for residents to travel away from their core programs to rural areas in order to achieve established training goals for minimum numbers of procedures or encounters.
    - The impact of changes in resident duty-hour restrictions should be monitored for the impact on rural training programs and health care delivery in comparison to institution based residency programs.

126 4. Support for Rural Access to Care
127 • Develop solutions for providing after-hours care for patients of federally-
128 funded health clinics requiring urgent or emergent care to prevent undue
129 burdens on community physicians.

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED**.**

Policy Statement

It is the American Osteopathic Association's position that state medical or osteopathic boards, as the licensing and regulatory authorities for physicians, are the appropriate entities to collect, maintain, and disseminate physician profile information to the public; supports the position that any legislation or regulations which mandate the release of physician profile information provide funding for the creation and maintenance of the profiling system without added expense to the physician; supports the position that only physician profiles that incorporate all of the following five principles (fairness, relevancy, timeliness, accuracy, and reliability) should be released to the public; opposes the inclusion of medical malpractice histories within physician profiles due to their susceptibility to misinterpretation and inherently prejudicial effect; supports the position that before physician profiles are released to the public, every physician has the opportunity to verify the accuracy of the information and to contest any incorrect information before it is disseminated to the public; and believes that the state licensing boards must include an appeal mechanism in their regulations that a physician may pursue if any information in ~~his or her~~ **THE PHYSICIAN'S** profile is inaccurate, and institute appropriate corrections.

SUBJECT: MINORITY HEALTH DISPARITIES -Source-H426-A/25

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) submitted H426-A25 Minority Health Disparities (SR-SOURCE-H428-A/20) to the 2025 House of Delegates during the sunset review process and recommended that it be reaffirmed; and

WHEREAS, the 2025 House of Delegates referred this policy back to BORPH and requested that BORPH update the policy and provide references; **AND** ~~therefore be it~~

~~RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.~~

~~MINORITY HEALTH DISPARITIES~~

WHEREAS, THE BORPH HAS DETERMINED THAT ~~M~~**m**inority health disparities are influenced by multiple factors and may vary across disease-specific conditions and populations.[1] They refer to measurable differences in health outcomes that adversely affect racial and ethnic minority populations. Contributing factors include barriers in understanding, communication, and effective interaction between clinicians and patients from diverse cultural backgrounds. Cultural competency reflects physicians' ability to understand, communicate with, and effectively engage individuals across diverse cultural contexts, including awareness of their own perspectives and recognition of differences that may influence care.[2] Affected populations include **BUT ARE NOT LIMITED TO** Blacks/African Americans, Hispanics/Latinos, Asians, American Indians/Alaska Natives, and Native Hawaiians/Other Pacific Islanders. These disparities are reflected in measurable differences across major causes of morbidity and mortality.

Although the top causes of death are broadly similar across populations, the rank order varies. The 2023 National Vital Statistics Reports indicate that chronic lower respiratory diseases appear among the top five causes of death for non-Hispanic White populations, whereas diabetes mellitus is more prominent among several minority populations.[3]

According to the Centers for Disease Control and Prevention, the National Center for Health Statistics, and the National Vital Statistics System (2023), age-adjusted mortality rates show variation across major disease categories by race and ethnicity.[4] The following summarizes key disparities identified in the 2023 data.

Cerebrovascular Disease. Non-Hispanic Black (54.1 per 100,000) show notably higher rates, and non-Hispanic Native Hawaiian/Other Pacific Islander populations (38.7 per 100,000) show modestly higher rates, compared with non-Hispanic White (38.0 per 100,000).[4]

Accidents (unintentional injuries). Non-Hispanic American Indian/Alaska Native (79.6 per 100,000) and non-Hispanic Black (78.0 per 100,000) populations show modestly higher rates compared with non-Hispanic White (63.3 per 100,000).[4]

Diabetes mellitus. Non-Hispanic Native Hawaiian/Other Pacific Islander (42.1 per 100,000), non-Hispanic Black (37.9 per 100,000), and non-Hispanic American Indian/Alaska Native (30.6 per 100,000) populations reflect modestly higher rates compared with non-Hispanic White (20.8 per 100,000).[4]

Diseases of the heart and malignant neoplasms. Non-Hispanic Black populations (200.0 and 156.8 per 100,000, respectively) have higher rates compared with non-Hispanic White (163.3 and 144.8 per 100,000). For several other minority populations, rates for these conditions are lower than those observed among non-Hispanic Whites.[4]

While this summary highlights disparities across the five (5) leading causes of death, differences also persist in other important health indicators, including maternal and infant outcomes, cancer screening, immunizations, and mental health conditions.

These findings reinforce that minority health disparities are multifactorial and vary across conditions and populations. Measurable differences in mortality are not confined to a single disease category but span the five (5) leading causes of death. The persistence of these patterns highlights the role of communication, access to care, and broader social and environmental contexts in shaping health outcomes across diverse populations.

~~AOA Policy Statements~~NOW THEREFOR BE IT RESOLVED, THAT THE BUREAU OF OSTEOPATHIC RESEARCH AND PUBLIC HEALTH RECOMMENDS THAT THE FOLLOWING POLICY BE REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA) continues to support osteopathic physicians in efforts to address minority health disparities and strengthen cultural competency across the profession.

1. The AOA promotes the education of osteopathic physicians and health care providers on racial and ethnic health care needs, all healthcare disparities, and implicit or explicit biases that may influence clinical decision-making.

2. The AOA supports increased access to care through the evaluation and analysis of medical information, targeting populations who are at greatest risk.

3. The AOA encourages the development of strategies to engage osteopathic physicians within the minority **AND UNDER-REPRESENTED** communities they

serve while integrating community-based resources to better support that population.

4. The AOA supports the inclusion of cultural competency training throughout the continuum of osteopathic education.

5. The AOA supports effective physician–patient communication for underserved minority populations, including translation and other language assistance services.

~~Minority Health Disparities Policy Statement~~

~~The American Osteopathic Association (AOA) adopts the following Position Statement on Minority Health Disparities.~~

~~**POSITION STATEMENT ON MINORITY HEALTH DISPARITIES**~~

~~The minority healthcare crisis in America stems from a multitude of factors. In particular, healthcare disparities most greatly affect underrepresented minorities, which include African-Americans, Hispanic-Americans, Asian-Americans, Native Americans and Pacific Islanders. In order to effectively create positive change, certain questions must be addressed. These include, but are not limited to: Which minorities are most affected by disease-specific illness? Why do these disparities exist? What can be done to eliminate them? Will a concerted effort to increase awareness and education about health-care disparities result in improved delivery of quality healthcare?~~

~~There is a need for the osteopathic profession and all of organized medicine to develop strategies which address health care disparities among minorities and prepare culturally competent physicians. Guidance should be offered to educate practicing physicians and trainees to better resolve known disparities and serve diverse populations. Efforts must be made to assure cultural competency and to identify and overcome language and other barriers to delivering health care to minorities.~~

~~Healthcare disparities include differences in health coverage, health access and quality of care. Health disparities result in morbidity and mortality experienced by one population group in relation to another.~~

~~Cultural competency is a set of academic and personal skills that allow one to understand and appreciate cultural differences among groups. The better a healthcare professional understands a patient's behavior, values and other personal factors, the more likely that patient will receive effective, high-quality care.~~

~~Racial and ethnic healthcare disparities caused by problems with access to, and utilization of, quality care may be alleviated through improvements in the cultural competency skills of physicians. Healthcare disparities may also be alleviated through effective recruitment of underrepresented minorities into health professions schools.~~

~~The Centers for Disease Control, in conjunction with the U.S. Department of Health and Human Services, created an Office of Minority Health in 1985. Through this collaboration, the Racial and Ethnic Approaches to Community Health Act (REACH) was designed to identify and eliminate disparities in a number of major areas. Disparities in access to care as well as quality of care in these areas result in poorer outcomes for racial and ethnic minorities.~~ **~~REACH GRANTS HAVE BEEN FUNDED THROUGH 2028.~~**

~~The identified Areas of disparity include: 1) infant mortality; 2) breast and cervical cancer screening and malignancy; 3) cardiovascular and cerebrovascular disease; 4) diabetes; 5) infectious diseases (i.e., Covid-19, influenza, HIV/Aids); and 6) child and adult immunizations;~~ **~~AND 7).~~** ~~In addition, serious disparities exist in the provision of care for mental health problems, substance abuse and suicide prevention.~~

~~The American Osteopathic Association calls for~~ **~~SUPPORTS~~** ~~the following actions to be taken to address minority health disparities and to improve cultural competency of its physician members:~~

1. ~~The education of physicians regarding racial and ethnic healthcare needs, including disparities in the areas listed above;~~

2. ~~The promotion of education regarding implicit or explicit biases among healthcare professionals that may play a role in clinical decision-making;~~

3. ~~The evaluation and analysis of medical information which would permit the targeting of populations who are at greatest risk;~~
4. ~~The identification of new methods to involve physician members in the communities in which they serve;~~
5. ~~The identification and integration of available resources to better serve minority communities, including houses of worship, schools and local government;~~
6. ~~The inclusion of cultural competency training throughout the continuum of osteopathic education;~~
7. ~~The development of strategies to actively recruit underrepresented minority physicians into the profession in both primary care and subspecialties;~~
8. ~~The development of approaches to encourage all physicians to provide care to underserved minority populations.~~
9. ~~The adoption of strategies to assist physicians to effectively communicate with their patients, addressing translation and other barriers to patient understanding.~~

SUBJECT: SUPPORT FOR **EVIDENCE BASED VACCINATION PRACTICES** ~~THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES (ACIP) RECOMMENDATIONS~~ -SOURCE-H411-A/25

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) submitted H-411-A/25 Support for the Advisory Committee on Immunization Practices (ACIP) Recommendations (SR-Source-H403-A/20) to the 2025 House of Delegates and recommended that it be reaffirmed; and

WHEREAS, the 2025 House of Delegates referred this policy back to BORPH and requested that BORPH monitor the oversight of vaccine policy by CDC/ACIP and request that the Board of Trustees approve an interim policy if significant changes occur in CDC/ACIP vaccine policies which no longer align with AOA vaccine policies; and

WHEREAS, BORPH discussed concerns about the decision making process behind revisions to the COVID and the MMRV vaccines discussed at the Sept 18-19, 2025 ACIP meeting; and

WHEREAS, BORPH determined that CDC/ACIP actions warranted revisions to AOA vaccine policies to remove language supporting CDC/ACIP vaccine recommendations and insert language stating the AOA's support of best available evidence-based medicine principles; and

WHEREAS, H-411-A/25 with the amended language was submitted by BORPH and approved by the AOA Board of Trustees at their December 9, 2025 meeting as an interim policy to be submitted to the July 2026 HOD; and

WHEREAS, CDC/ACIP continues to revise vaccine recommendations that do not support best available evidence-based medicine principles now, therefore be it

RESOLVED, that the interim policy be approved:

SUPPORT FOR **EVIDENCE BASED VACCINATION PRACTICES** ~~THE ADVISORY COMMITTEE ON IMMUNIZATION PRACTICES (ACIP) RECOMMENDATIONS~~

The American Osteopathic Association (AOA) encourages osteopathic physicians **TO** consider the vaccination history as an integral part of their patient's health record and should counsel their patients on appropriate

30 vaccinations for their age and health conditions. Osteopathic physicians
31 should take all reasonable steps to ensure their patients of all ages are fully
32 immunized against vaccine preventable illnesses and make vaccine
33 recommendations to their patients according to **BEST AVAILABLE**
34 **EVIDENCE-BASED MEDICINE PRINCIPLES.** ~~the recommendations of the~~
35 ~~Advisory Committee on Immunization Practices (ACIP) and published in the~~
36 ~~Morbidity and Mortality Weekly Report (MMWR) and should not advocate~~
37 ~~alternative schedules.~~

SUBJECT: PREVENTION OF CHILD INJURY ON PLAYGROUNDS – SLIDE SAFETY

SUBMITTED BY: American Academy of Osteopathy
American Osteopathic Academy of Sports Medicine
American College of Osteopathic Pediatricians
American Osteopathic Academy Orthopedics
American Osteopathic College of Physical Medicine and Rehabilitation

REFERRED TO: Committee on Public Affairs

WHEREAS, some of the playground apparatuses that children enjoy are slides; and

WHEREAS, parents, other adults, and older children may at times accompany them on these devices; and

WHEREAS, between 2002 and 2015, an estimated 352,698 children less than 6 years of age were injured on slides in the United States with children between 12-23 months representing the highest percentage[i] [ii]; and

WHEREAS, over one-fifth of all Emergency Department visits for US playground-related injuries are due to slides, and 4.5% of these have required hospitalization

WHEREAS, overall, the affected body part was the lower extremity in 26% of those injured and the most frequent diagnosis was a fracture (36%), which may actually be underestimated due to the occurrence of occult fractures, especially of the tibia; and

WHEREAS, the younger the age of the child, the higher the percentages of injuries involving the lower extremity and children were noted to be on the lap of another person at the time of the injury (both $p < 0.001$); and

WHEREAS, children less than 3 years of age were 12 times more likely to be identified from narratives as being on another person's lap at the time of injury

WHEREAS, the size and weight of adults apparently play a big role in the potential for injury. A young child sliding by themselves is unlikely to get a severe injury to their leg even if the foot catches due to the relatively low forces; and

WHEREAS, it is reasonable to assert that a preventable source of significant injury for children playing on slides is for adults to refrain from accompanying them; be it therefore

26 RESOLVED, that the American Osteopathic Association (AOA) advocate and
27 disseminate the statistics of slide injuries of children under six years old to its
28 members **THAT THE AOA WILL ENCOURAGE MEMBERS TO**
29 **COMMUNICATE SLIDE INJURY STATISTICS AND SAFETY OF**
30 **CHILDREN ON SLIDES TO CAREPERSONS WHEN APPLICABLE**; about
31 safety for ~~children on slides to be communicated to families~~; and be it further

32 RESOLVED, that the AOA also **SUPPORTS** ~~advocates for~~ playground companies
33 and municipalities ~~to~~ place appropriate signage advising of the danger **OF**
34 **SLIDE INJURIES** and advising against adults accompanying children on
35 slides.

SUBJECT: ADOPTION OF THE AMERICAN ACADEMY OF PEDIATRICS CHILDHOOD AND ADOLESCENT IMMUNIZATION SCHEDULE

SUBMITTED BY: American College of Osteopathic Pediatricians

REFERRED TO: Committee on Public Affairs

WHEREAS, the American College of Osteopathic Pediatricians (ACOP) is the recognized representative body for osteopathic pediatricians within the American Osteopathic Association (AOA); and

WHEREAS, the American Academy of Pediatrics (AAP) has developed and annually updates a Childhood and Adolescent Immunization Schedule for individuals under 18 years of age based on decades of rigorous, evidence-based, scientifically validated research; and

WHEREAS, the 2026 AAP Childhood and Adolescent Immunization Schedule differs from a recently issued immunization schedule from the Centers for Disease Control and Prevention (CDC); and

WHEREAS, the AAP and CDC historically collaborated to create a unified childhood immunization schedule that was scientifically validated annually for decades, but recent changes to the CDC schedule represent a departure from longstanding evidence-based medical standards; and

WHEREAS, the AAP Childhood and Adolescent Immunization Schedule is supported and formally endorsed by twelve national medical and health organizations representing more than one million clinicians, physicians, pharmacists, and pediatric healthcare professionals, including the American Academy of Family Physicians, American College of Nurse Midwives, American College of Obstetricians and Gynecologists, American Medical Association, American Pharmacists Association, Council of Medical Specialty Societies, Infectious Diseases Society of America, National Association of Pediatric Nurse Practitioners, National Medical Association, Pediatric Infectious Diseases Society, Pediatric Pharmacy Association, and the Society for Adolescent Health and Medicine; and

WHEREAS, the ACOP fully supports the AAP Childhood and Adolescent Immunization Schedule and affirms that decades of evidence demonstrate this schedule to be both safe and effective in preventing infectious diseases and protecting child and community health; and

WHEREAS, maintaining vaccine recommendations grounded in unbiased, scientifically trusted, and evidence-based research is essential to

safeguarding pediatric health and promoting public trust in immunization programs; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) House of Delegates formally adopt and recognize the American Academy of Pediatrics Childhood and Adolescent Immunization Schedule as the recommended immunization schedule for children and adolescents under 18 years of age; and be it further

RESOLVED, that the American Osteopathic Association (AOA) oppose the adoption, endorsement, or implementation of any childhood immunization schedule that is not firmly based on evidence-based research from trusted, validated, and unbiased scientific sources; and be it further

RESOLVED, that the AOA affirm its commitment to evidence-based medicine by supporting immunization recommendations that reflect the best available scientific data for the prevention of illness and the protection of pediatric and public health.

SUBJECT: ACKNOWLEDGING EMERGING EVIDENCE ON E-CIGARETTE USE AND CANCER-RELEVANT RISK PATHWAYS AND ENCOURAGING INTEGRATION INTO OSTEOPATHIC MEDICAL EDUCATION

SUBMITTED BY: Arizona Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, data from the 2024 National Youth Tobacco Survey (NYTS) demonstrate that e-cigarettes remain the most commonly used tobacco product among U.S. middle and high school students, reinforcing the clinical relevance of vaping exposure in current and future patient populations[5] ; and

WHEREAS, 2024 surveillance data report that 5.9% of middle and high school students used e-cigarettes currently, including frequent and daily use patterns among current users[8]; and

WHEREAS, contemporary peer-reviewed research continues to document patterns of co-use of e-cigarettes with other nicotine products among U.S. youth, which may complicate clinical counseling and preventive care strategies[3]; and

WHEREAS, peer-reviewed evidence updates and systematic reviews evaluating vaping and cancer-related outcomes conclude that the overall evidence linking e-cigarette use to cancer risk remains limited and evolving, requiring further rigorous longitudinal research [6,7]; and

WHEREAS, a 2025 systematic review suggests a potential association between e-cigarette use and increased lung cancer risk, particularly among dual users, while emphasizing that causality cannot be established due to limited longitudinal evidence and study heterogeneity[7]; and

WHEREAS, a 2025 evidence update reports substantial evidence that e-cigarette exposure is associated with biomarkers reflective of cancer disease risk, while also concluding that overall evidence on cancer risk remains limited and should be further investigated by future population-based research and clinical studies[6]; and

WHEREAS, a 2025 meta-analysis reported that e-cigarette exposure is associated with alterations in biomarkers relevant to cancer risk pathways, supporting continued clinician awareness while long-term outcomes evidence develops[1]; and

WHEREAS, peer-reviewed experimental evidence indicates that exposure to e-cigarette aerosols can induce DNA damage and other cellular changes relevant to carcinogenesis, reinforcing the importance of cautious preventive counseling and ongoing research [2,4]; and

WHEREAS, osteopathic physicians are trained to deliver whole-person, preventive, and patient-centered care, and should be equipped to counsel patients using current evidence regarding evolving nicotine delivery products and associated long-term health concerns; and

WHEREAS, accurate and up-to-date education on e-cigarette use trends and emerging cancer-relevant evidence may strengthen preventive counseling by supporting appropriate interpretation of evolving data and its limitations [1,6,7]; and

WHEREAS, E-cigarette use remains prevalent in the United States, including among adolescents and young adults, and continues to represent an evolving public health issue. Contemporary peer-reviewed evidence has increasingly explored vaping exposure through cancer-relevant biomarkers, epigenetic changes, and cellular damage pathways, while also emphasizing that the overall evidence establishing definitive causal cancer outcomes remains limited and requires further rigorous longitudinal research. As the scientific understanding of vaping-related harms continues to develop, osteopathic physicians-in-training benefit from timely, accurate, and appropriately framed education regarding current use trends and emerging health risks. This resolution seeks to have AOMA and AOA acknowledge these evolving findings and encourage osteopathic medical schools to incorporate updated statistics and evidence trends into relevant didactic and case-based learning to strengthen preventive care counseling and risk reduction education in alignment with osteopathic principles; now, therefore, be it

RESOLVED, that the American Osteopathic Association (AOA) acknowledges e-cigarette use as a significant and evolving public health issue relevant to preventive care and future patient health outcomes, including cancer risk.

DATE: _____July 18, 2026_____

SUBJECT: NATIONAL STEWARDSHIP AND CENTRALIZED DIGITIZATION OF HISTORICAL OSTEOPATHIC RECORDS

SUBMITTED BY: Michigan Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS, the future of osteopathic medicine and its crucial role in global healthcare depends upon its continuation as a profession with distinct values and philosophy; and

WHEREAS, the preservation of the history of osteopathic medicine is essential to maintaining this identity and the profession's unique standing within the overall field of medicine; and

WHEREAS, over a century of historical, educational, and scientific records are currently fragmented across various locations and institutions, which could result in risk of loss or inconsistent/inadequate access; and

WHEREAS, centralized national stewardship and digitization of these records would enhance research, support education, and strengthen the governmental and public's understanding of osteopathic medicine; and

WHEREAS, the American Osteopathic Association (AOA) is uniquely positioned to lead the profession in establishing ethical standards for historical stewardship and digital governance; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) formally recognize **AND ENCOURAGE** the ~~importance~~ of preservation of ~~historical~~ **ADMINSTRATIVE AND ORGANIZATIONAL** records as a professional priority essential to the ~~enhancement and~~ advancement of osteopathic identity **THROUGH ITS HISTORY**; and be it further

RESOLVED, that the AOA ~~establish~~ **ENDORSE THE ESTABLISHMENT** OF a workgroup or task force to ~~develop~~ **FOSTER DEVELOPMENT OF** a centralized national digital repository for non-clinical historical records in collaboration with affiliated organizations and partner institutions **SUCH AS THE MUSEUM OF OSTEOPATHIC MEDICINE, THE AMERICAN OSTEOPATHIC FOUNDATION, THE OSTEOPATHIC HERITAGE FOUNDATION, THE NATIONAL BOARD OF OSTEOPATHIC MEDICAL EXAMINERS, AND THE AMERICAN ASSOCIATION OF COLLEGES OF OSTEOPATHIC MEDICINE FOR FUNDING, RESOURCES, AND CONTENT**; and be it further

~~RESOLVED, that such a repository explicitly exclude patient medical records and Protected Personal Information (PPI), focusing solely on historical and organizational materials; and be it further~~

~~RESOLVED, that participation be voluntary, with contributing institutions retaining ownership of their materials subject to their own licensing and donor policies; and be it further~~

~~RESOLVED, that the AOA consider convening a multidisciplinary advisory group to establish non-binding guidance on governance, data security, and the ethical use of repository materials; and be it further~~

RESOLVED, that the AOA encourage its affiliates and colleges of osteopathic medicine to digitize **AND SHARE** their historical documentation.~~; and be it further~~

~~RESOLVED, that the AOA explore pathways to provide financial support for these efforts and encourage its affiliates, institutions and colleges of osteopathic medicine to do so as well, and report on all of these efforts to the AOA House of Delegates in 2027.~~

Background Information: Provided by AOA Staff

Current AOA Policy: The AOA does have a Record Retention and Destruction Policy which governs the retention of internal documentation. The resolution is ambiguous as to what types of records it is seeking be maintained in a central repository. Because of this, caution should be exercised as to creating guidance which would contradict internal document retention and destruction policies. Policies which do permit and encourage periodic file maintenance reduce risk (e.g., from data breaches or identity theft), increase efficiency by making it easier to locate relevant documents and manage active files, reduce data storage costs and provide legal protection.

Prior HOD action on similar or same topic: None

FISCAL IMPACT: Approximately $100K to develop; $50K annually for maintenance
Actual costs are unknown and approximate costs have been provided as a fiscal impact. Costs would be expected in developing the IT framework for the repository which is estimated to have an implementation cost of about $50k and an ongoing operating fee of about $30k (variable dependent on amount of storage). There are also redaction costs (variable depending on the volume of documents - $100/hr. anticipated rate), and the financial support requested; such costs could be significant.

The AOA Finance Committee does not support the fiscal impact.

ACTION TAKEN: __Not Adopted _____

DATE: ___July 18, 2026_____

SUBJECT: SUPPORT FOR 24/7 ANONYMOUS NALOXONE DISPENSING STRATEGIES IN HIGH-TRAFFIC AREAS IN UNDERSERVED AND RURAL COMMUNITIES

SUBMITTED BY: Osteopathic Physicians & Surgeons of California

REFERRED TO: Committee on Public Affairs

WHEREAS, the opioid crisis continues to be a significant public health challenge, with over one hundred thousand deaths in 2023 due to drug overdose and nearly 76% of those deaths involving an opioid[1-2]; and

WHEREAS, naloxone is a proven, life-saving medication that effectively reverses opioid overdoses[3]; and

WHEREAS, timely prehospital administration of naloxone can safely stabilize many overdoses and reduce the need for prolonged emergency care, as demonstrated by the Hospital Observation Upon Reversal (HOUR) study which showed that those with a normal exam one hour after reversal had a 95.6% negative predictive value for adverse events, with only one requiring repeat naloxone[16]; and

WHEREAS, individuals in rural areas often experience barriers to accessing naloxone due to stigma and fear of legal consequences[4,12,13]; and

WHEREAS, rural communities frequently lack nearby healthcare infrastructure, resulting in critical delays in overdose care, and many rural Emergency Medical Services (EMS) agencies have closed or are currently at risk of closure, further exacerbating barriers to timely medical access[15]; and

WHEREAS, intensive care admissions for opioid overdoses have risen sharply, with a national analysis of 162 hospitals showing that the average ICU cost per overdose admission increased from $58,517 in 2009 to $92,408 in 2015, reflecting the high expense of severe cases that progress without timely reversal[17]; and

WHEREAS, evidence shows that low-barrier access points, such as public health vending machines, increase distribution and utilization of harm reduction supplies, especially to those less connected to healthcare[5-7]; and

WHEREAS, the implementation of anonymous naloxone vending machines in underserved settings, such as six county jails in Michigan, led to a 63.5% increase in naloxone distribution within six months, demonstrating that the ability to access naloxone privately and without stigma was a key factor in this significant rise[14]; and

WHEREAS, multiple states, including Nevada, have successfully implemented naloxone in public health vending machines, leading to increased naloxone use, improved overdose response times, and immediate reductions in opioid-involved overdose fatalities[8]; and

WHEREAS, the American Osteopathic Association (AOA) supports the continued availability of naloxone as an over-the-counter medication and advocates for the education and training of its use for patients at risk of overdose, family members, and caregivers to prevent opioid-related deaths (Policy H603-A/23); and

WHEREAS, the AOA, through Policy H429-A2022, supports harm reduction strategies aimed at reducing morbidity and mortality and advocates for increased availability of harm reduction modalities at the local, state, and federal level; and

WHEREAS**,** although existing AOA policy supports harm reduction strategies and naloxone accessibility broadly, additional approaches that provide 24/7, anonymous, low-barrier access may further improve access in rural and underserved communities; now, therefore be it

RESOLVED**,** that the American Osteopathic Association (AOA) supports policies that expand access to 24/7, anonymous, low-barrier naloxone dispensing mechanisms, including vending machines and similar approaches, in underserved, rural, and other high-risk communities; and be it further

RESOLVED**,** that the AOA supports the targeted education and outreach initiatives that increase public awareness of the availability and use of anonymous naloxone dispensing mechanisms and promote training on naloxone administration in underserved and rural regions; and be it further

RESOLVED**,** that the AOA supports efforts to better understand access, utilization, and outcomes associated with harm reduction strategies, including anonymous naloxone dispensing approaches in high-need communities.

SUBJECT: ENSURING EQUITABLE VETERAN ACCESS TO OSTEOPATHIC MANIPULATIVE TREATMENT

SUBMITTED BY: Texas Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, the United States Department of Veterans Affairs (VA) is the largest integrated healthcare system in the United States and is committed to a Whole Health model emphasizing non-pharmacologic, patient-centered approaches to pain management; and

WHEREAS, Osteopathic Manipulative Treatment (OMT) is a safe, evidence-informed, non-opioid modality that aligns directly with national priorities to reduce opioid dependence and improve functional outcomes in patients with musculoskeletal and related conditions; and

WHEREAS, the VA formally recognizes osteopathic principles and OMT within its Whole Health framework and maintains extensive training partnerships through the VA Office of Academic Affiliations with colleges of osteopathic medicine; and

WHEREAS, despite this recognition, access to OMT within VA facilities remains inconsistent due to workforce limitations and lack of standardized implementation of OMT services; and

WHEREAS, under the VA MISSION Act of 2018, veterans may be eligible for community care when access standards are not met, yet in practice, access to OMT through community care networks is often not reliably available; and

WHEREAS, veterans are often denied access to OMT even when they have access to other non-pharmacologic pain management modalities, including chiropractic care and interventional pain management services, creating inequities in access to osteopathic-specific care; and

WHEREAS, expanding access to OMT for veterans directly supports American Osteopathic Association (AOA) strategic priorities by promoting the distinct value of osteopathic medicine, advancing patient-centered care, and strengthening the profession's national visibility and credibility; now, therefore be it;

RESOLVED, that the American Osteopathic Association (AOA) **SUPPORTS** ~~advocate for~~ federal policy within the United States Department of Veterans Affairs to ensure that all veterans have equitable access to Osteopathic

31 Manipulative Treatment (OMT) as part of comprehensive, non-pharmacologic
32 pain management services; and, be it further

33 RESOLVED, that the AOA **SUPPORTS** ~~advocate for~~ expansion of direct care
34 capacity for OMT within VA facilities through increased **PHYSICIAN**
35 **TRAINING OPPORTUNITIES**, hiring, credentialing, and privileging of
36 osteopathic physicians trained in OMT; and, be it further

37 RESOLVED, that the AOA **SUPPORTS** ~~advocate for~~ strengthened implementation
38 of the VA MISSION Act of 2018 with respect to OMT to ensure that veterans
39 have reliable access to OMT through community care networks, with access
40 standards and reimbursement structures equivalent to those for other non-
41 pharmacologic and interventional pain management services; and, be it
42 further

43 RESOLVED, that the AOA collaborate with federal agencies, policymakers, and
44 national stakeholders to eliminate administrative, credentialing, and
45 reimbursement barriers that limit access to OMT; and, be it further

46 RESOLVED, that the AOA support and promote research, data collection, and
47 outcomes reporting within the VA system to further demonstrate the
48 effectiveness, cost-efficiency, and patient-centered benefits of OMT.

Background Information: Provided by AOA Staff

FY 2026 Military Construction, Veterans Affairs, and Related Agencies Appropriations bill includes language reinforcing the use of OMT as a critical nonpharmacologic therapy for veterans managing chronic pain.

Coverage Details: OMT is formally categorized as a rehabilitation service with the VA health system. Veterans must have a referral from a VA primary care provider or specialist to access the service.

Many VA medical centers employ D.O.s who provide OMT directly, If OMT is not available at a specific VA facility, the VA may cover treatment through the VA Community Care Program with on outside physician.

Current AOA Policy:
H311-A/15 Supporting the use of OMM in the VA

SUBJECT: AIRCRAFT EMERGENCY MEDICAL SUPPLIES - SOURCE: H401-A/25

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Public Affairs

---

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and

3 WHEREAS, the Bureau on Federal Health Programs believes that resolves in the
4 policy is incorporated in existing AOA policies, therefore be it

5 RESOLVED, that the Bureau on Federal Health Programs recommends the
6 following policy be SUNSET.

7 Policy Statement

8 The American Osteopathic Association (AOA) supports the concept that airlines,
9 under the control of the Federal Aviation Administration, maintain a policy for
10 adequately equipping commercial aircraft of greater than 19 seats with at least
11 minimal diagnostic and emergency medical supplies and supports legislation and
12 regulation that any physician providing emergency service while on board aircraft be
13 immune from any liability or legal action.
14

Background Information: Provided by AOA Staff

Current AOA Policy:

Resolve statements in H-401/A25 (H-447/A26) are incorporated in H-342/A24 *Airline Medical Kits,* and with guidance from the American Osteopathic College of Occupational & Preventive Medicine (AOCOPM), the other resolve in H-401 is included in H-319/A21 *Good Samaritan Act (Hold Harmless Agreement) Performed on Commercial Aircraft.* It is the recommendation of CSHA and BFHP that the two policies remain independent of each other due to their distinct issues. And recommends that H-401/A25 (H-447/A26) be SUNSET

MEMO

Date: May 2026

To: Committee on Public Affairs

From: Teresa A. Hubka, DO, Chair, AOA Finance Committee

RE: Res. No. H-456-A/2025- Sharing Centralized Resources on State-Specific Reproductive Health Policies (*Referred to the Finance Committee on July 20, 2025)*

Background: Resolution number H-456-A/2025- Sharing Centralized Resources on State-Specific Reproductive Health Policies was referred to the AOA Finance Committee on July 20, 2025. In 2025, the AOA Board of Trustees' position was to not support the resolution due to the significant fiscal impact and staff resources needed.

AOA Finance Committee Position: The AOA Finance Committee does not support the resolution due to the $150,000 fiscal impact.

SUBJECT: SHARING CENTRALIZED RESOURCES ON STATE-SPECIFIC REPRODUCTIVE HEALTH POLICIES

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, federal changes limiting access to reproductive health information on federal health websites have left physicians and patients unaware of reproductive rights on a national scale[1]; and

WHEREAS, variations in access to comprehensive reproductive health care exist across states and are constantly changing; for example, Mississippi prohibits pregnancy termination once a fetal heartbeat is detected and Alabama criminalizes pregnancy termination unless the mother's life is threatened-highlighting the need for centralized guidance[2]; and

WHEREAS, the lack of clarity and uncertain enforcement of state reproductive health laws by regulatory agencies creates a challenging landscape for physicians to navigate[3]; and

WHEREAS, without clear guidance from the profession, physicians practicing in states with restrictive reproductive health laws are hesitant to refer patients out of state for legal pregnancy termination or provide patients with online resources about pregnancy termination - that not only impacts patient access to reliable health information and care, but it also negatively affects the patient-physician relationship [4,5]; and

WHEREAS, tools, such as the Guttmacher Interactive Map[7] and the Kaiser Family Foundation's State Profiles for Women's Health[8], showing reproductive health care access across various states are available but should be shared within medical communities to raise awareness and provide centralized access to reliable, evidence-based information; and

WHEREAS, the American Osteopathic Association (AOA) is committed to protecting the sanctity of the patient-physician relationship from interference laws[9,10] and recognizes the importance of having access to federal health data and guidance[11]; and now, therefore be it

~~RESOLVED, that the American Osteopathic Association (AOA)~~ **~~MAKES AVAILABLE EXISTING~~** ~~shares evidence-based, validated tools~~ **~~WITHIN THE OSTEOPATHIC PHYSICIAN COMMUNITY~~** ~~to improve physician access to~~ **~~ACCURATE~~** ~~reproductive health information.~~

RESOLVED, THAT THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) ENCOURAGES THE SHARING OF ACCURATE UP TO DATE EXISTING, EVIDENCE-BASED VALIDATED TOOLS ON STATE-SPECIFIC REPRODUCTIVE RIGHTS INCORPORATED SUCH AS CONTINUING MEDICAL EDUCATION OR SHARED RESOURCES TO IMPROVE PHYSICIAN ACCESS TO ACCURATE REPRODUCTIVE HEALTH INFORMATION.

106th ANNUAL AOA HOUSE OF DELEGATES MEETING
2026 RESOLUTION ROSTER (500 SERIES)
As of 07-18-26

HOUSE OF DELEGATES REFERENCE COMMITTEE DESCRIPTIONS:
Committee on Constitution and Bylaws (500 series)
This reference committee reviews and considers the wording of all proposed amendments to the AOA's Constitution, Bylaws and the Code of Ethics.

Res. No.	Resolution Title	Submitted By	Reference Committee	With Action
H-500	Amendments to the American Osteopathic Association Constitution – Article VIII, Section 2 *(First Read)* (Dept. of Communications)	CAGOS	Constitution & Bylaws	First Read
H-501	Amendments to the American Osteopathic Association Constitution – Article VI *(First Read)* (HOD Structure)	CAGOS	Constitution & Bylaws	First Read
H-502	Amendments to the American Osteopathic Association Bylaws – Article IX (Dept. of Communications)	CAGOS	Constitution & Bylaws	Adopted in 2027 pending adoption of H500/A26 First Read
H-503	Amendments to the American Osteopathic Association Bylaws – Article V, Sections 1, 10 and 12 (HOD Structure)	CAGOS	Constitution & Bylaws	Adopted in 2027 pending adoption of H500/A26 First Read
H-504	Amendments to the American Osteopathic Association Bylaws – Article VIII, Section 3 (VP Duties)	CAGOS	Constitution & Bylaws	Adopted
H-505	Amendments to the American Osteopathic Association Constitution – Article III *(First Read)* (AOA Divisional Society Representation on the AOA Board of Trustees)	MAOPS-MOA-LOMA-VOMA-MOMA-SCOMS	Constitution & Bylaws	First Read

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION CONSTITUTION - ARTICLE VIII, SECTION 2 (FIRST READ)

SUBMITTED BY: Committee on AOA Governance & Organizational Structure

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, Goal 2 of the proposed 2026-2029 strategic plan is 'Communicating the value of osteopathic medicine'. Establishing a governance Department of Communications supports this strategic goal; and

WHEREAS, the addition of a governance Department of Communications would enhance the process of physician input into broad messaging strategies; now, therefore be it

RESOLVED, that the AOA House of Delegates approve the following amendments to:

AOA Constitution

Article VIII - Board of Trustees and Executive Committee

Section 2 - Executive Committee

The Executive Committee of this Association shall consist of the President, President-elect, Past Presidents for the preceding two years, the chairs of the Departments of Affiliate Relations, **COMMUNICATIONS**, Education, Finance, Governmental Affairs, Membership, and Research and Public Health**.**

Background Information: Provided by AOA Staff

FISCAL IMPACT: $0

ACTION TAKEN: First Read

DATE: July 18, 2026

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION CONSTITUTION – ARTICLE VI (FIRST READ)

SUBMITTED BY: Committee on AOA Governance & Organizational Structure (CAGOS)

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, As the profession began growing exponentially, the increasing number of delegates created an unsustainable situation. The 2014 House of Delegates approved a Constitution and Bylaws modification to cap the divisional society delegate composition to 473, in addition to the specialty college affiliates and bureau of emerging leaders, exclusive of students; and

WHEREAS, per the Bylaws, one student delegate seat is provided for each College of Osteopathic Medicine (COM) branch campus. The significant growth in the number of COMs is causing the HOD to grow to impractical numbers; and

WHEREAS, the AOA Board of Trustees was directed to review the construct of the House of Delegates and provide a recommendation on the criteria for modification. The other aspects on operationalization are to be managed independently by the stakeholders; and

WHEREAS, the AOA Board of Trustees in collaboration with SOMA and COSGP leadership collaborated to construct the proposed House of Delegates structure modification as outlined in Exhibit A; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) House of Delegates approve the House of Delegates structure modification proposal; and

RESOLVED, that the AOA House of Delegates review the following amendments as a first read to:

AOA Constitution

Article VI - House of Delegates

B. ~~Student Council Representation in Divisional Societies Divisional societies shall be awarded one additional delegate as a student council representative for each college of osteopathic medicine accredited by the Commission on Osteopathic College of Accreditation (COCA) and located in the state represented by that divisional society, such student delegate is to be elected according to the Bylaws of the American Osteopathic Association.~~

B. STUDENT REPRESENTATION. OSTEOPATHIC MEDICAL STUDENT DELEGATE POSITIONS SHALL BE ALLOCATED DELEGATES AS OUTLINED IN THE BYLAWS.

Background Information: Provided by AOA Staff
Current AOA Policy: None

Prior HOD action on similar or same topic: None

FISCAL IMPACT: $0

ACTION TAKEN: First Read

DATE: July 18, 2026

Exhibit A

DETAILED DELEGATE NUMBERS			
Category	**Proposed**	**Current**	**Variance**
Divisional Societies (52)*	473	473	No Change
Specialty Societies (21)	21	21	No Change
SOMA	0	1	-1
BEL	3	3	No Change
COMs	0	73**	-73
Student Delegates	SOMA: 20 COSGP (SGA): 20		+40
TOTAL	**537**	**571**	**-34**

*per 2014 Bylaws **1 student per COM

Delegate Composition Explanatory: The student delegate numbers (20 SOMA; 20 COSGP) would be equal to 8% of the total affiliate organization delegates of the House of Delegates. Annually the slated student delegates would need to stay engaged throughout the year with the state in which they resided. The aspects on operationalization are to be managed independently by the stakeholders.

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION BYLAWS - ARTICLE IX PREVIEW

SUBMITTED BY: Committee on AOA Governance & Organizational Structure (CAGOS)

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, Goal 2 of the proposed 2026-2029 strategic plan is 'Communicating the value of osteopathic medicine'. Establishing a governance Department of Communications supports this strategic goal; and

WHEREAS, the addition of a governance Department of Communications would enhance the process of physician input into broad messaging strategies; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) House of Delegates approve the following amendments to the AOA Bylaws upon approval of the July 2027 second read of AOA's Constitution amendment:

AOA Bylaws

Article IX - Departments, Bureaus, and Committees

The Board of Trustees and House of Delegates, consistent with the powers given to it by these Bylaws, shall establish and determine the duties of departments, bureaus, councils, commissions, committees, and task forces necessary to further the policies of the Association. The Association's departments shall include the Departments of Affiliate Relations, **COMMUNICATIONS**, Education, Finance, Governmental Affairs, Membership, and Research and Public Health. The activities of all departments, bureaus and committees shall, so far as possible, be executed in close cooperation with the Chief Executive Officer. Upon the expiration of the terms of office of chairs and members of the departments, bureaus, or committees, all records of the same shall be delivered by the chairs to the Chief Executive Officer. All employed staff of departments, bureaus, and committees in the offices shall be under the jurisdiction of the Chief Executive Officer.

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION BYLAWS – ARTICLE V, SECTIONS 1, 10 AND 12

SUBMITTED BY: Committee on AOA Governance & Organizational Structure (CAGOS)

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, As the profession began growing exponentially, the increasing number of delegates created an unsustainable situation. The 2014 House of Delegates approved a Constitution and Bylaws modification to cap the divisional society delegate composition to 473, in addition to the specialty college affiliates and bureau of emerging leaders, exclusive of students; and

WHEREAS, per the Bylaws, one student delegate seat is provided for each College of Osteopathic Medicine (COM) each branch campus, and each additional location. The significant growth in the number of COMs is causing the HOD to grow to impractical numbers; and

WHEREAS, the AOA Board of Trustees was directed to review the construct of the House of Delegates and provide a recommendation on the criteria for modification. The other aspects on operationalization are to be managed independently by the stakeholders; and

WHEREAS, the AOA Board of Trustees in collaboration with SOMA and COSGP leadership collaborated to construct the proposed House of Delegates structure modification as outlined in Exhibit A; now, therefore be it

RESOLVED, that the AOA House of Delegates approve the House of Delegates structure modification proposal; and

RESOLVED, that the AOA House of Delegates approve the following amendments to the AOA Bylaws upon approval of the July 2027 second read of AOA's Constitution amendment:

AOA Bylaws

Article V - House of Delegates
Section 10~~-Representation of Student Councils~~
~~The student council of each accredited college of osteopathic medicine, each branch campus and each additional location may be represented in the House of Delegates by its president (and such president's alternate elected by such student council) as a member of the delegation of the divisional society representing the state in which such college of osteopathic medicine and branch campus is located. Each such student delegate shall be accredited in the same manner and have the same privileges as the other members of the divisional society delegation; however,~~

~~the chief administrative officer of each accredited college of osteopathic medicine and each branch campus shall certify the student council president and alternate to the Chief Executive Officer of this Association in writing or by electronic communication at least 30 days prior to the first day of the annual meeting of the House of Delegates and such Chief Executive Officer shall forthwith similarly certify each student council president and alternate to the secretary of the appropriate divisional society.~~

SECTION 10 – STUDENT REPRESENTATION

A. SOMA DELEGATION

FOUR PERCENT (4%) OF THE TOTAL DELGATES AS STATED IN THE CONSTITUTION SECTIONS ARTICLE VI, SECTION 1(A), (C) AND (D) SHALL BE ALLOCATED TO THE STUDENT OSTEOPATHIC MEDICAL ASSOCIATION (SOMA). SOMA DELEGATES WILL BE SELECTED ACCORDING TO SOMA'S BYLAWS.

B: COSGP REPRESENTATION

FOUR PERCENT (4%) OF THE TOTAL DELGATES AS STATED IN THE CONSTITUTION SECTIONS ARTICLE VI, SECTION 1(A), (C) AND (D) SHALL BE ALLOCATED TO THE COUNCIL OF OSTEOPATHIC STUDENT GOVERNMENT PRESIDENTS (COSGP) OF THE AMERICAN ASSOCIATION OF COLLEGES OF OSTEOPATHIC MEDICINE (AACOM). COSGP DELEGATES WILL BE SELECTED ACCORDING TO COSGP'S BYLAWS BUT SEATED WITH THE DIVISIONAL SOCIETY IN WHICH THEIR SCHOOL IS LOCATED.

DELEGATES OF BOTH SOMA AND COSGP MUST BE CURRENT STUDENTS, IN GOOD STANDING, ENROLLED IN A PROGRAM ACCREDITED BY THE COMMISSION ON OSTEOPATHIC COLLEGE ACCREDITATION (COCA). SOMA AND COSGP SHALL PROVIDE TO THE CHIEF EXECUTIVE OFFICER, IN WRITING BY ELECTRONIC COMMUCATION, THE NAMES OF ITS DELEGATES AT LEAST 30 DAYS PRIOR TO THE FIRST DAY OF THE ANNUAL MEETING OF THE HOUSE OF DELEGATES. THE CHIEF EXECUTIVE OFFICER SHALL CERTIFY EACH MEMBER QUALIFIED AND SELECTED UNDER THIS SECTION. THE CALCULATION IDENTIFIED IN ARTICLE V, SECTION 10 OF THE BYLAWS SHALL BE ROUNDED TO THE CLOSEST DELEGATE NUMBER.

Article V - House of Delegates

~~Section 12-Representation of Student Osteopathic Medical Association~~

~~The Student Osteopathic Medical Association (SOMA) may be represented in the House of Delegates by one member of the SOMA Board selected by vote of the SOMA Board (or such SOMA member's alternate, who shall also be a member of the SOMA Board selected by the SOMA Board). No SOMA delegate or alternate shall also be a member of a divisional society's delegation representing the state in which such SOMA Board member's osteopathic college is located. The SOMA delegate shall be accredited in the same manner and have the same privileges as~~

~~the other members of the divisional society delegation; however, the Chief Administrative Officer of SOMA shall certify the SOMA delegate and alternate to the Chief Executive Officer of this Association in writing or by electronic communication at least 30 days prior to the first day of the annual meeting of the House of Delegates.~~

Article V - House of Delegates
Section 1-Certification of Delegates and Alternates

b. Specialty Colleges

Each AOA recognized specialty college shall select one delegate and at least one alternate **WHO ARE REGULAR MEMBERS OF THE AOA** to the AOA House of Delegates in a manner prescribed in its Constitution and Bylaws. No specialty college delegate or alternate shall concurrently serve as a delegate for a divisional society at the AOA's House of Delegates. The Secretary of each specialty college shall certify the name of its delegate and alternate to the Chief Executive Officer of the AOA at least 30 days prior to the first day of the annual meeting of the AOA House of Delegates. Each delegate and alternate must be a member in good standing of this Association and their specialty college.

ACTION TAKEN: _____Adopted_____

DATE: ___July 18, 2026_____

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION CONSTITUTION – ARTICLE III - AOA DIVISIONAL SOCIETY REPRESENTATION ON THE AOA BOARD OF TRUSTEES (FIRST READ)

SUBMITTED BY: Missouri Association of Osteopathic Physicians and Surgeons; Maine Osteopathic Association; Louisiana Osteopathic Medical Association; Virginia Osteopathic Medical Association; Montana Osteopathic Medical Association; South Carolina Osteopathic Medical Society

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, the American Osteopathic Association's (AOA) Constitution in Article III – Divisional Societies states, " the AOA shall be a federation of divisional societies…," and divisional societies constitute the grassroots foundation of AOA membership and the primary mechanism for physician engagement, recruitment and retention; and

WHEREAS, as the AOA seeks to strengthen and grow its membership, the expertise of divisional society leadership—derived from direct engagement with members and understanding of state and local needs—is essential to informed strategic planning and decision-making; and

WHEREAS, the AOA Board of Trustees, as currently structured, does not include designated divisional society representation and therefore lacks consistent access to this operational, "boots on the ground" perspective; and

WHEREAS, the Association of Osteopathic State Executive Directors (AOSED), composed of divisional society executive leaders, possesses substantial institutional knowledge and expertise in member engagement, organizational management, and implementation of AOA initiatives; and

WHEREAS, actions of the Board of Trustees directly impact divisional societies, and absent formal representation, the practical implications of such actions on membership growth, retention, and local engagement may not be fully considered; and

WHEREAS, inclusion of divisional society leadership on the Board of Trustees would ensure incorporation of diverse perspectives, including those grounded in frontline member engagement and program implementation, thereby strengthening the effectiveness of AOA governance; and

WHEREAS, enhanced divisional society representation would promote alignment, continuity, and shared strategic purpose between the AOA and its federated societies, supporting successful implementation of initiatives and the long-term sustainability of the organization; now, therefore, be it

RESOLVED, that the House of Delegates of the American Osteopathic Association, amend Article VIII of the Constitution in the following manner to ensure divisional society representation on the Board of Trustees; and

RESOLVED, that the AOA House of Delegates review the following amendments as a first read to:

AOA Constitution

Article VIII - Board of Trustees and Executive Committee

Section 1-Board of Trustees The Board of Trustees shall be the administrative and executive body of the Association and perform such other duties as are provided by the Bylaws. The Board of Trustees of this Association shall consist of ~~twenty-eight~~ **TWENTY-NINE** members.

A. Seven elected officers: The President, President-Elect, The Past Presidents for the preceding two years, First Vice-President, Second Vice-President, and Third Vice-President;

B. Eighteen at-large trustees, six of whom shall be elected annually by the House of Delegates to serve for three years;

C. One new physician in practice member elected by the House of Delegates to serve for a one year term. Candidates for the new physician in practice position shall be osteopathic physicians who have completed their postdoctoral training within the past five years and be nominated by the Bureau of Emerging Leaders. Candidates must be members in good standing of the AOA;

D. One postdoctoral trainee, to include intern, resident, or a fellow, member elected by the House of Delegates to serve for one year. Candidates for the postdoctoral trainee position shall be enrolled in an Accreditation Council for Graduate Medical Education (ACGME) internship, residency or fellowship. Candidates for the postdoctoral trainee position shall be nominated by the Bureau of Emerging Leaders. Candidates should be members in good standing of the AOA; and

E. One student member elected by the House of Delegates to serve for one year. Candidates for the student position shall be nominated, in alternating years, by the Council of Osteopathic Student Government Presidents (COSGP) and the Student Osteopathic Medical Association (SOMA).

F. ONE REPRESENTATIVE FROM DIVISIONAL AFFILIATES TO SERVE FOR TWO YEARS. THE DIVISIONAL AFFILIATE TRUSTEE MUST BE AN EXECUTIVE DIRECTOR/CHIEF EXECUTIVE OFFICER OF A STATE

67 **DIVISIONAL AFFILIATE AND BE NOMINATED BY THE ASSOCIATION OF**
68 **OSTEOPATHIC STATE EXECUTIVE DIRECTORS (AOSED).**

SUBJECT: TELEHEALTH - SOURCE: H603-A/21

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and determined that it is still relevant; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED.

AOA Telehealth Policy

The COVID-19 public health emergency caused by the highly contagious sars-cov-2 virus has demonstrated the need to broaden and optimize the use and delivery of healthcare services through telehealth to prevent the spread of the outbreak. With the rapid pace of advancement in technology, telehealth is an evolving practice – both in the types of services furnished, and the tools used to expand access to medical care. Telehealth is a tool used not only to provide direct services to a patient via information technology, but also specialist and primary care consultations, the online storage and sharing of medical information, imaging services through digital transmissions and the interpretation of images, remote patient monitoring, and medical education.

The practice of medicine via electronic and technological means has been occurring for decades. As technology advances and the breadth of medical practice in this area expand, there is an increasing call to regulate patient care delivered through technological resources. Advocates for telehealth argue that it provides improved access to medical care and services to patients in rural or underserved areas. They also emphasize that it allows for easier access to care for immobile patients and those with limited mobility. Cost-effectiveness, through reduced travel times, is also noted as a cause for increased patient demand for health care services through telehealth. Despite its advantages, opponents raise concerns over the lack of regulation and oversight to control this practice. The primary issues involving telehealth are: (1) geographical and site-of-service restrictions: (2) licensure of out-of-state practitioners who use technology to treat patients in a state where they are not licensed to practice; (3) technological problems and barriers; (4) reimbursement issues regarding payment for services rendered; and (5) quality of care.

Access, Efficiency and Quality

The U.S. Department of Health and Human Services (HHS) and the Centers for Disease Control and Prevention (CDC) have identified several benefits of telehealth. Virtual services limit physical contact and exposure to infectious diseases, shorten in-office wait times, eliminate commuting time and travel expenses, reduce time off from work and the need for childcare, and provide access to medical care in rural and underserved communities.

Despite the advances in telecommunication technology, some stakeholders are concerned that a lack of regulation and oversight may undermine the quality of care provided, or create an opportunity for fraud and abuse. Care deemed to be below the acceptable quality standard can be addressed either via the disciplinary action of a state medical board or via civil legal action (medical malpractice claims). Liability rules vary state by state and concerns exist over the determination of venue when a provider is utilizing telehealth across state lines. Additionally, standard of care must be established and may vary between face-to-face encounters and telehealth encounters; although, many providers argue against this variation.

Liability Concerns

One issue that arises under the discussion of advancing telehealth is the question of jurisdiction for liability cases. This includes cases of medical malpractice, where a physician licensed to practice in two or more states practices medicine over state lines through electronic means, and an adverse event occurs.

Current state and federal statutes and case law provide a remedy to overcome this barrier. Patients are provided a pathway to legal recourse in the state where the accident occurred, if there is a reasonable expectation for that harm to have occurred there. If the patient can provide evidence confirming that location, (IP address, for example) and did not attempt to deceive the physician as to their location. Under this established system, any time a physician is choosing to perform telehealth, they should have the expectation that they are choosing to be held liable under another state's laws if an adverse event occurs.

Licensure

Telehealth is a broad area and is not regulated by one specific board or oversight body. ~~There is no standard for~~ Telehealth education and ~~no~~ certification **STANDARDS CONTINUE TO EVOLVE** ~~in the provision of telehealth~~. Therefore, the burden of oversight currently falls on the state medical boards. Each board defines care that meets an acceptable quality somewhat differently. State licensure requirements also diverge with significant differences in testing, postgraduate education and continuing medical education requirements. Additionally, scopes of practice varies by state with no overall standard**S** in regards to prescription authority or practice rights. Finally, uniformity fails to exist in what constitutes a visit (establishment of the “physician-patient relationship”), with some states requiring a

face-to-face visit before a telehealth relationship can be established. Due to these differences, some advocates have promoted the concept of national licensure. They believe that a national license for the practice of medicine would eliminate barriers that prevent widespread use of telehealth.

The AOA supports state-based licensure and discipline oversight, believing that states should have the right to directly regulate and provide oversight for services being provided to their citizens. ~~Concerns have been expressed about who would assume responsibility for disciplinary action against providers if a national medical license was initiated~~. Currently, protection of the residents of the state is a top function and core value of the state licensing boards.

Conclusion

The AOA recognizes the benefits of online technology to the medical field, and its ability to assist many patients who may not have access to medical care. The AOA further recognizes the need to provide a broad framework that establishes payment and policy recommendations to effectively advocate for telehealth at the national level, while providing enough flexibility to allow each state to incorporate policies that meet the health care needs of their citizens.

The AOA supports that a physician is practicing medicine, in the absence of physical interaction, when medical services are being provided through ~~simultaneous two-way communication~~, **SYNCHRONOUS AND ASYNCHRONOUS** recognizing that some services may require appropriate and corresponding delays in said communication.

The AOA supports that the utilization of technology in patient care should be used to increase access to care, and must not be used in a way that would diminish patient centered comprehensive personal medical care or the quality of care being provided to the patient. To this end, the AOA supports the concept of telehealth and advocates that public and private payers adopt payment systems that are inclusive of telehealth, and payment parity for professional advice, consultation and development of patient treatment plans provided to patients, family members or designee via telehealth.

The AOA supports that the standard of care provided through the use of technology should be equivalent to that of care provided when the physician and patient are within close physical proximity.

The AOA supports that the technological network being used to deliver patient care must have protocols in place that ensure the stability and security of that network to comply with applicable state and federal laws regarding patient privacy protections.

The AOA supports that the scope of care being delivered by the physician and other health care providers through telehealth should not exceed education training and applicable state and federal law.

The AOA supports that the state-based licensure and ability of states to govern activities within their borders is paramount and would oppose any national licensure or efforts to preempt state statutes.

The AOA supports that malpractice claims that arise from care provided through technological means, when the physician and patient in separate jurisdictions, should be adjudicated under the process currently utilized by the judicial system; whereby, the plaintiff has the ability to determine the venue where the case is filed, within the constraints of that system.

The AOA supports physicians must provide complete transparency to their patients regarding their location, jurisdiction of licensure and any limitations of the technology used to deliver care.

The AOA supports that as physicians provide care in a variety of new ways, including telehealth, advanced technology can be used to improve patient care. The AOA further supports that telehealth policies directly tie into the Patient-Centered Medical Home (PCMH) model for care and other value-based care arrangements, and recognizes that we must simultaneously implement advancements in telehealth in order to be successful in new alternative payment models.

The AOA supports collaboration with the American Medical Association and other stakeholders to ~~advocate for~~ **SUPPORT** legislation or an executive order to mandate that all health insurance plans, including those issued by the centers for Medicare & Medicaid services and entities covered under Employee Retirement Income Security Act (ERISA) law continue to reimburse for telehealth services at a level that is commensurate with a face-to-face visit.

The AOA supports efforts to address educational and operational barriers that interfere with implementation of telehealth in physician offices, and believes that every effort should be made to allow telehealth services to be provided by the patient's attending physician, rather than by physicians or clinicians the patient is unaffiliated with or is not referred by the patient's primary care physician.

The AOA will monitor developments in telehealth on an ongoing basis and update this policy as needed.

Health Insurance

Exchanges

Policy Statement

The American Osteopathic Association adopts the following "Principles for State Health Insurance Exchanges" to assist states in the formation of health insurance exchanges and will communicate these principles to the Department of Health and Human Services (HHS), the Centers for Medicare and Medicaid Services (CMS), governors and state legislatures.

Principles for State Health Insurance Exchanges

The "Patient Protection and Affordable Care Act" (ACA) (Public Law 111-148) authorized the establishment of state health insurance exchanges, or marketplaces. Exchanges provide a forum for individuals and small businesses to compare and purchase private health insurance plans. The ACA requires the U.S. Department of Health and Human Services establish initial guidance on the formation of the exchanges and what basic components a product must meet to qualify for participation in the new marketplace. The ACA depends on states to establish "exchanges," which are health coverage marketplaces intended to make it easier for individuals and small employers to shop, compare, and enroll in health insurance coverage.

States retain a great degree of flexibility in how exchanges operate, what benefits products can or should include beyond the federal floor, and how patients and physicians interact with insurers and their products within the exchanges. The AOA believes that states should adopt policies, as part of their health insurance exchanges that protect consumers, improve the quality of care provided, and decrease costs across the health care system. A critical element to achieving these goals is the establishment and implementation of policies that promote access to continuous and comprehensive primary care services.

States are the traditional regulators of the health insurance market and know their unique marketplace. However, states face many policy choices that will determine how successful exchanges will be in assuring that consumers and employers have a wide choice of attractive products. It is critical Exchanges be done right. To assist states in the formation of health insurance exchanges, the AOA proposes the following principles for state health insurance exchanges:

1. Structure of Health Insurance Exchanges
    a. All qualified plans should be permitted to offer coverage in an Exchange.
    b. Exchange coverage should be a choice, not a requirement. Individuals and employers should be able to purchase coverage inside and outside an Exchange.
    c. Consumers should have access to a broad range of innovative plan designs, and **THEY SHOULD BE PRESENTED AND/OR MARKETED**

IN A MANNER THAT EMPHASIZES TRANSPARENCY AND CLARITY IN THE SPECIFIC BENEFITS THAT CONSUMERS WILL RECEIVE, SUPPORTING WELL- INFORMED PLAN SELECTION. ~~their choices should not be limited to only a narrow set of standardized plan options~~

d. Exchanges should allow employers the option to keep their employees together and to continue to select qualified coverage among the health plans offered in the Exchanges.

e. State regulators (who are responsible for the entire market and assuring health plans have enough resources to pay claims) should continue to oversee premiums, network adequacy and transparency standards.

2. Governance Structure

a. The governing body of an exchange should include, by statute, consumer and physician representatives.

b. The governing body membership should be representative of all parties and should not be dominated by any one stakeholder, i.e. insurance companies.

3. Promote Enhanced Access and Quality

a. The benefit design should promote and incentivize primary care through a requirement that all plans ensure broad implementation of the patient- centered medical home as a condition of being recognized as a qualified plan.

b. Participating plans should demonstrate a commitment to providing enhanced payments to primary care physicians for care coordination and services provided outside the traditional face-to-face encounter.

C. States should assure adequate networks exist for each health insurance product sold on its exchange; to include primary and specialty care across all aspects of medical and behavioral health.

D. Health insurers should maintain free, publicly available network directories that are updated every 15 days.

E. Plans should not be allowed to discriminate against any patient population **THROUGH THEIR NETWORK DESIGNS** ~~including but not limited to tiering of participating providers.~~

F. PLANS SHOULD NOT BE ALLOWED TO DISCRIMINATE AGAINST OSTEOPATHIC PHYSICIANS BASED SOLELY ON THEIR DEGREE.

4. Uniform Administrative Functions

a. Enrollee applications should be standardized, readily available in a variety of culturally acceptable mediums, and easily understood.

b. Enrollees should receive presumptive eligibility—or provisional enrollment— to allow for delivery of essential preventive and primary care services upon submission of an application.

c. Consumer assistance and information offices, if not incorporated into the administrative framework of the exchange, should work closely with the state's exchange governing and administrative bodies.

d. Patients and physician practices should have access to consumer assistance programs.

e. Exchanges should adopt uniform standards for data requirements and definitions related to eligibility, enrollment and subsidy determinations.

f. Exchanges should focus on services and tools to help make it easier for consumers to compare and purchase health coverage and connect qualified individuals to subsidized coverage.

g. Exchanges should not add further layers of regulation or restrictions on market choice.

5. Standardized Contracting

a. Physician contracting should be standardized across all plans.

b. The inclusion of “all product clauses” should be strictly prohibited.

c. States opting to create multi-state exchanges, or enter into interstate compacts for the purchase of insurance, should harmonize contracting rules across all participating states.

6. Benefit Design

a. The essential benefit package should be inclusive of all services, whether explicitly or passively stated – including, but not limited to, coverage for osteopathic manipulative therapy/medicine.

b. The essential benefit package should promote continuous and comprehensive primary care services and should not place penalties or financial disincentives for primary care services provided outside the network.

7. Quality Improvement and Reporting

a. Quality measures should be uniform across plans participating in the exchange, state compacts, Medicaid, Children’s Health Insurance Plan, and state and local employee health benefits plans. Quality measures also should coordinate with Medicare, when possible.

b. Quality improvement programs should be inclusive of patient registry programs, such as the American Osteopathic Association’s (AOA) Clinical Assessment Program (CAP)

SUBJECT: ACCESS TO CARE – NETWORK ADEQUACY AND COVERAGE - SOURCE: H614-A/21

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and determined that it remains relevant; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED.

Policy Statement

The American Osteopathic Association (AOA) will advocate for public and private payors ensuring plan coverage for all medically necessary services, regardless of availability within the service area of its beneficiaries, and supporting state regulators as the primary enforcer of network adequacy requirements.

The AOA supports requiring provider terminations without cause be done prior to the enrollment period, allowing physicians to be added to the network at any time, and requiring health insurers to submit and make publicly available, at least quarterly, reports to state regulators that provide data on several measures of network adequacy.

The AOA supports requiring health insurers to indemnify patients for any covered medical expenses provided by out-of-network providers incurred over the co-payments and deductibles that would apply to in-network providers, in the case that a provider network is deemed inadequate by the health plan or appropriate regulatory authorities.

The AOA will advocate for public policies to require out-of-network expenses count toward a participant's annual deductibles and out-of-pocket maximums when a patient is enrolled in a plan with out-of-network benefits, or forced to go out-of-network due to network inadequacies.

The AOA supports fair and equitable compensation to out-of-network providers in the event that a provider network is deemed inadequate by the health plan or appropriate regulatory authorities; and, that physician and

patients have access to adequate and fair appeals processes in the event that they are harmed by inadequate networks.

The AOA supports the development of a mechanism by which health insurance enrollees are able to file formal complaints about network adequacy with appropriate regulatory authorities, and will advocate for laws that prohibit health insurers from falsely advertising that enrollees in their plans have access to physicians of their choosing if the health insurer's network is limited.

The AOA will advocate that health plans be required to document to regulators that they have met requisite standards of network adequacy for hospital-based physician specialties (i.e. radiology, pathology, emergency medicine, anesthesiologists and hospitalists) at in-network facilities.

SUBJECT: THIRD PARTY PAYOR COVERAGE PROCESS REFORM - SOURCE: H637-A/16

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and

WHEREAS, the Council on Economic and Regulatory Affairs determined to amend the policy to more accurately reflect the council's intentions; and now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED AS AMENDED.

Policy Statement

The American Osteopathic Association (AOA) supports the development of model legislation and/or regulations to require that Medicare, commercial insurance companies, state Medicaid agencies, or other third party insurers utilize transparent and accountable processes for developing and implementing coverage decisions and policies.

The AOA will advocate that public and private insurers and benefit management companies develop transparent clinical protocols as well as formal processes to write / revise them; that those processes should seek input from the relevant physician organizations; **THAT SUCH PROTOCOLS OR CRITERIA ARE BASED ~~IN~~ ON PUBLICLY AVAILABLE LITERATURE AND EVIDENCE BASED CLINICAL GUIDELINES, ~~OR EVIDENCE~~**; and that such clinical coverage protocols should be easily and publicly accessible on their websites.

The AOA will advocate that when public and private insurers and benefit management companies make changes to or revise clinical coverage protocols, said companies must inform all insured individuals and participating providers in writing no less than 90 days prior to said change(s) going into effect; and, be it further

Through legislative and/or regulatory efforts the AOA will advocate that when Medicare Administrative Contractors (MAC) propose new or revised Local Coverage Determinations (LCD), said Contractors must: 1. Conduct Carrier Advisory Committee meetings in public, with minutes recorded and posted to the Contractor's website; and 2. Disclose the rationale for the LCD, including the

evidentiary standard upon which it is based when releasing an approved LCD. Through legislative and/or regulatory efforts**,** the AOA will advocate that CMS adopt a new LCD reconsideration process that allows for an independent review of a MAC's payment policies by a third-party empowered to make recommendations to affirm, withdraw or revise~~d~~ said policies to the Secretary of HHS; and **AOA WILL ALSO ADVOCATE** that MACs shall be prohibited from adopting another MAC's LCD without first undertaking a full and independent review of the underlying science and necessity of such LCD in their jurisdiction.

SUBJECT: PHYSICIAN AUTONOMY IN NON-PHYSICIAN CLINICIAN COLLABORATION AGREEMENTS

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Ad Hoc Committee

WHEREAS, physicians hold ultimate responsibility for patient care and bear legal and ethical accountability for medical decisions made under their supervision or collaboration; and

WHEREAS, an increasing number of employed physicians are being expected to enter supervisory or collaborative agreements with non-physician clinicians, sometimes under conditions that may impede autonomy and negatively impact job security or contract renewal processes[~~1, 2~~]; and

WHEREAS, in environments where physicians lack adequate support, control, or resources to effectively supervise non-physician clinicians, both patient safety and the physician's professional standing can be jeopardized; and

WHEREAS, the decision to collaborate or supervise another clinician requires careful professional judgment, evaluation of the clinician's competencies, and consideration of patient safety; and

WHEREAS, several professional organizations have recognized this issue as a developing area of discussion[~~3, 4~~ 1,2]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports osteopathic physicians in their informed, voluntary participation in collaborative or supervisory agreements with non-physician clinicians, with compensation expectations clearly defined and commensurate with the physician's responsibilities, clinical judgment, and comfort level; and, be it further

RESOLVED, that the AOA ~~opposes the imposition of new or expanded collaborative or supervisory responsibilities on physicians, outside the terms of their original employment agreements, without transparent, mutually beneficial, and appropriately structured contract re-negotiation processes.~~ **SUPPORTS TRANSPARENT, MUTUALLY BENEFICIAL, AND APPROPRIATELY STRUCTURED CONTRACT RENEGOTIATION BEFORE PHYSICIANS ASSUME NEW OR EXPANDED COLLABORATIVE OR SUPERVISORY RESPONSIBILITIES BEYOND THE TERMS OF THEIR ORIGINAL EMPLOYMENT AGREEMENTS.**

Explanatory Statement:
This resolution aims to protect patient safety and physician autonomy by emphasizing the need for mutually beneficial supervisory agreements, while expanding access to safe, quality care. The proposition is geared towards contract development and renewal. Contract renewals may present barriers to negotiation such as restrictive covenants, compensation, and clawback provisions. Therefore, physicians may have limited negotiation capacity and find themselves in unfavorable collaboration agreements as a term of continued employment.

SUBJECT: PHYSICIAN RIGHT TO COLLECTIVE BARGAINING

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Ad Hoc Committee

WHEREAS, physicians across the United States often face challenges related to excessive administrative burdens[1,2], inadequate compensation, rigid employment contracts, burnout, and limited control over their work environments; and

WHEREAS, the proportion of physicians employed by hospitals or corporate entities has risen over 15% since 2019, with over 77% currently falling into this category[3]; and

WHEREAS, physician compensation is increasing at a rate not commensurate with inflation or cost of living increases[1,4]; and

WHEREAS, collective bargaining and unionization can provide a way for physicians to negotiate for fair wages, reasonable working conditions, improved patient safety standards, and protections against exploitative practices; and

WHEREAS, the American Osteopathic Association (AOA) currently supports the rights of resident physicians to unionize and practice collective bargaining (H346-A/2024); and

WHEREAS, the AOA is committed to promoting the welfare, professional development, and autonomy of osteopathic physicians; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports physicians ~~lawfully~~ engaging in collective bargaining to protect professional and patient interests and encourages constructive dialogue between physicians and healthcare employers regarding working conditions, professional autonomy, and patient care.

Explanatory Statement:

Physicians lead multidisciplinary teams and are ultimately responsible for patient care. In modern healthcare settings, however, many physicians practice within large organizational structures and are subject to administrative and operational decisions that significantly influence clinical environments. These realities shape how care is delivered and affect physicians' ability to consistently meet professional and ethical standards.

Supporting physicians who choose to engage in collective bargaining can strengthen their ability to participate meaningfully in decisions that affect patient safety, workplace conditions, and the sustainability of medical practice. A unified physician voice can help

address unsafe or inefficient work environments, reduce factors contributing to professional burnout, and promote balanced collaboration between physicians and healthcare organizations. These efforts are intended to support high-quality patient care and a stable healthcare workforce.

Any physician organizing or participating in collective bargaining activities must conduct themselves in accordance with applicable laws and regulations, while maintaining a commitment to continuity of care. AOA support of physicians who choose to engage in lawful collective action affirms the organization's commitment to patient-centered care, professional responsibility, and the long-term health of the medical profession.

SUBJECT: ARTIFICIAL INTELLIGENCE TECHNOLOGIES AND OSTEOPATHIC MEDICINE

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Ad Hoc Committee

WHEREAS, advancements in artificial intelligence (AI)-driven technologies for use cases across the healthcare spectrum offer great promise for improving patient care through increasing efficiency, alleviating administrative burdens, augmenting physician decision-making, and enabling physicians to spend more time with patients; and

WHEREAS, a broad range of AI tools are being brought to market, including medical device software, health IT tools (e.g. products for billing and coding, prior authorization, scribing, etc.), medical reference tools relying on large language models, among numerous other technologies; and

WHEREAS, the pace of AI innovation continues to accelerate as there are now over 1,400 FDA approved AI software medical devices, 330 of which were approved in 2025 alone, and even more non-device AI products; and

WHEREAS, adoption of AI tools by physicians has risen rapidly, with 80% of physicians reporting that they use AI in a professional context, double the share reported in 2023, although many also express concerns about wider AI adoption, including concerns around liability, privacy and security, and skill loss; and

WHEREAS, incorporation of AI into clinical practice should be done in a patient-centered manner that aligns with osteopathic principles and whole-person care; and

WHEREAS, such incorporation of AI into clinical practice requires considerations around accountability, product safety and efficacy, privacy and security, transparency in products and data sets, methods for ensuring fairness, among other considerations; and

WHEREAS, in order to promote appropriate adoption of AI tools into clinical practice, the American Osteopathic Information Association (AOiA) has worked with DO leaders in digital health, including its Digital Health Steering Committee, to develop and publish its "OsteopathicAI Definition: A profession-level minimum practice standard for ethical clinician- and patient centered AI use in osteopathic medicine"; and

WHEREAS, the OsteopathicAI definition developed by the DHI Steering Committee is intended to be iterative to reflect the rapidly evolving practice environment and state of technology, evolved based on the guidance of its subject matter experts; and

WHEREAS, the AOA plays a leadership role in promoting the safe and effective adoption of AI in alignment with the distinct osteopathic approach to care; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) ~~will~~ support**S** the adoption of safe and effective artificial intelligence tools in clinical practice, ~~and to ensure that state, federal, and private payer policies support use of artificial intelligence products in a manner that supports~~ **FOR** patient-centered, holistic care; and, be it further

RESOLVED, that the AOA endorses the American Osteopathic Information Association (AOiA) definition of OsteopathicAI as a minimum professional standard for patient-centered use of AI in osteopathic medicine. ; **AND BE IT FURTHER**

RESOLVED, THAT THE AOIA WILL REPORT BACK ANNUALLY TO THE HOUSE OF DELEGATES ANY CHANGES IN THE DEFINITION OF OSTEOPATHICAI.

SUBJECT: COMPREHENSIVE ~~INSURANCE~~ **THIRD PARTY PAYOR** COVERAGE FOR TESTOSTERONE DEFICIENCY TREATMENTS

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Ad Hoc Committee

WHEREAS, testosterone deficiency, also known as male hypogonadism, can lead to significant health issues such as fatigue, impaired sexual function, low bone density, reduced muscle mass, and depressed mood[1,2]; and

WHEREAS, in the United States, testosterone deficiency affects between four and five million men[2]; and

WHEREAS, effective treatment options for testosterone deficiency include not only injectable testosterone but also gels, patches, and other formulations that may better suit individual patient needs[1,2,3]; and

WHEREAS, equitable access to a variety of testosterone ~~replacement~~ therapies is essential for personalized patient care and optimal health outcomes [1,2,3]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) advocate for comprehensive ~~insurance~~ **THIRD PARTY PAYOR** coverage of a range of testosterone ~~replacement~~ therapies to ensure patients have access to the most suitable treatment for their individual needs; and, be it further

RESOLVED, that the AOA ~~advocate for~~ **SUPPORTS THIRD PARTY PAYORS REGULARLY REVIEWING AND UPDATING** ~~insurance providers to regularly review and update~~ their coverage policies for testosterone ~~replacement~~ therapies to align with clinical guidelines.

SUBJECT: ENHANCED SCREENING OF ~~WOMEN~~ **FEMALES** FOR OBSTRUCTIVE SLEEP APNEA (OSA)

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Ad Hoc Committee

WHEREAS, Obstructive Sleep Apnea (OSA) is associated with a 2- to 3-fold increased risk of cardiovascular and metabolic disease[1], and

WHEREAS, OSA affects ~~approximately 17-23%~~ **A SIGNIFICANT PERCENTAGE** of ~~women~~**FEMALES**, with prevalence varying by age, menopausal status, and diagnostic criteria used[2] , such that among ~~women~~ **FEMALES** aged 30-49 years, OSA prevalence is approximately 8.7%, increasing to **ABOUT** 27.8% in those aged 50-70 years[1]; and

WHEREAS, the prevalence of OSA **MORE THAN** doubles postmenopausally, approaching rates comparable to ~~men~~**MALES**, with postmenopausal ~~women~~ **FEMALES MORE THAN** 3 times more likely to have OSA compared to premenopausal ~~women~~**FEMALES**[4]; and

WHEREAS, ~~the condition is~~ **OSA HAS BEEN SHOWN TO BE** substantially underdiagnosed in ~~women~~**FEMALES**, with estimates suggesting over 80% of cases remain undetected[3]; likely ~~exacerbated by the fact that women with OSA presenting differently than men, more commonly reporting insomnia, fatigue, mood disturbances, and depression rather than the classic symptoms of loud snoring and witnessed apneas[2]~~; **DUE TO THE DIFFERENCES IN PRESENTING SYMPTOMATOLOGY;** and

WHEREAS, traditional diagnostic criteria and clinical assessments often prioritize symptoms more common in ~~men~~**MALES**[1], - **LOUD SNORING AND WITNESSED APNEAS – RATHER THAN THE "NON-CLASSIC" SYMPTOMS, SUCH AS INSOMNIA, FATIGUE, MOOD DISTURBANCES, AND DEPRESSION, WHICH OFTEN MAY BE MORE INDICATIVE OF OSA IN FEMALES, THUS** exacerbating **SEX-BASED** inequities in OSA screening and treatment; therefore, be it

RESOLVED, that the American Osteopathic Association (AOA) ~~advocate for~~ **SUPPORTS** education on the importance of screening and treating ~~both men and women~~ **MALES AND FEMALES** for Obstructive Sleep Apnea (OSA), ~~regarding overall reduction of cardiovascular health and quality of life, paying particular attention to the sex differences in presentation and prevalence in women after menopause~~; and **BE IT FURTHER**,

RESOLVED, that the AOA ~~encourage education regarding the inequities in OSA screening, through advocating for~~ **SUPPORTS CRITERIA FOR INITIATING OSA SCREENING BASED ON SYMPTOMATOLGY THAT INCLUDES NON-TRADITIONAL PRESENTATIONS MORE LIKELY IN FEMALES** ~~lower thresholds for screening and challenging the need for documentation of traditionally male-dominant symptoms~~; and, be it further

RESOLVED, that the AOA ~~advocate for~~ **SUPPORTS** ~~insurance companies to~~ **THAT THIRD PARTY PAYORS** ~~to~~ approve ~~women~~ **FEMALES** for **OSA DIAGNOSTIC STUDIES WHEN** ~~sleep studies when clinical suspicion and comorbidities are strong, despite not fitting the criteria set based on studies that were male-dominant.~~ **APPROPRIATE SYMPTOMATOLOGY, COMORBIDITIES, AND CLINICAL SUSPICION ARE DOCUMENTED.**

SUBJECT: EXPANDING EQUITABLE ACCESS TO MENOPAUSAL HORMONE THERAPY (MHT) **ACROSS THIRD-PARTY PAYORS** ~~THROUGH MEDICAID AND OTHER INSURANCE PROGRAMS~~

SUBMITTED BY: Osteopathic Physicians & Surgeons of California

REFERRED TO: Ad Hoc Committee

WHEREAS, menopausal hormone therapy (MHT) is a well-established, evidence-based treatment that improves quality of life for individuals experiencing menopause and perimenopause[1]; and

WHEREAS, MHT significantly reduces vasomotor symptoms, genitourinary syndrome of menopause, and bone loss, and improves sleep, mood, and sexual health in menopausal and perimenopausal individuals[2]; and

WHEREAS, untreated menopausal symptoms are associated with reduced workplace productivity[3], increased healthcare utilization[4], higher risks of osteoporosis and fractures[5], and worsened cardiovascular outcomes[6]; ~~underscoring the importance of equitable coverage;~~ and,

WHEREAS, precedent exists for hormone therapy to be recognized as medically necessary and consistently covered under Medicaid and private insurance, as demonstrated by the coverage of testosterone therapy for hypogonadism in ~~cisgender men~~**MALES**[7-10], while coverage for estrogen and progesterone therapy for menopausal and perimenopausal individuals is variable across states and plans, reflecting systemic inequities in access to medically indicated hormone therapy; and,

WHEREAS, no comprehensive national study currently exists examining Medicaid or private insurance coverage of menopause hormone therapy (MHT), creating a gap in understanding of access disparities for low-income and marginalized populations; now, therefore, be it,

RESOLVED, that the American Osteopathic Association (AOA) support the adoption of policies advocating for equitable, medically indicated coverage of Menopausal Hormone Therapy (MHT) across ~~Medicaid and other insurance programs.~~ **THIRD-PARTY PAYORS**.

SUBJECT: COLLABORATION FOR REDUCTION OF **SYSTEMS LEVEL BARRIERS CONTRIBUTING TO PROLONGED** HOSPITAL PATIENT LENGTH OF STAY

SUBMITTED BY: South Carolina Osteopathic Medical Society

REFERRED TO: Ad Hoc Committee

WHEREAS, extended hospital length of stay exposes patients to increased mortality and morbidity risks from inpatient care. These include but are not limited to hospital acquired infections, deep venous thromboembolism, falls, excessive testing, and medication errors; and

WHEREAS, extended hospital length of stay leads to system costs **AND** ~~including~~ hospital physician, resident and staff burnout; and

WHEREAS, extended hospital length of stay reduces hospital bed availability and **WHICH MAY** contribute~~s~~ to emergency room overcrowding; and

WHEREAS, extended hospital length of stay contributes to higher healthcare costs ~~from provider date of service billing~~; and

WHEREAS, work with policymakers to identify best approaches for reducing hospital length of stay in U.S. healthcare delivery systems has been an ongoing focus of research and improvement; and

WHEREAS, public and private ~~insurers~~ **THIRD-PARTY PAYORS** typically take ~~3~~ **THREE OR MORE** business days to make coverage determinations regarding rehabilitation or skilled nursing facility placement following hospitalization; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) ~~advocate for~~ **SUPPORTS** expedited coverage for post-acute placement of hospitalized patients; and

RESOLVED, that the AOA support efforts to **IDENTIFY AND** address system-level barriers contributing to prolonged hospital length of stay; and be it further

RESOLVED, that the AOA ~~advocate for~~ **SUPPORTS** timely post-acute placement services with continued goals of excellence in patient safety, healthcare and hospital quality.

Exhibit A: Glossary of Terms

Term	Definition
Antisemitism	Hostility, prejudice, or discriminatory conduct directed toward Jewish individuals, institutions, or communities, including rhetoric or actions that dehumanize, threaten, or marginalize Jewish people or deny the legitimacy of their identity and including, but not limited to the full definition of antisemitism by the International Holocaust Remembrance Alliance (IHRA).
Discrimination	Any act, conduct, or practice, intentional or unintentional, that results in disparate treatment, exclusion, or disadvantage of an individual or group due to a protected characteristic, contrary to applicable federal, state, or organizational nondiscrimination standards.
Electronic Posts / Social Media	Any content or communication disseminated through digital platforms, including but not limited to social networking sites, online forums, messaging applications, blogs, or public comment systems, regardless of audience size or privacy settings.
Expressions of Hatred / Hate	Any verbal, written, symbolic, or behavioral communication that demeans, vilifies, threatens, or incites hostility toward an individual or class of individuals on the basis of a protected characteristic. This term encompasses both explicit and implicit expressions, whether communicated directly or through digital or electronic means.
Expressions of Support for Violence	Any verbal, symbolic, written endorsement, encouragement, or glorification of harm directed toward an individual or group.
Federally Protected Classes	Those categories of individuals explicitly identified under federal law as protected from discrimination, including but not limited to race, color, religion, sex (inclusive of pregnancy, sexual orientation, and gender identity), national origin, age, disability, and genetic information.
Healthcare Setting	Any physical or virtual environment in which an osteopathic physician or member engages in professional, educational, administrative, or organizational activity subject to ethical and conduct standards of the American Osteopathic Association.
Sex (Including Pregnancy, Sexual Orientation, or Transgender Status)	A legally recognized protected characteristic encompassing biological sex, pregnancy or related medical conditions, sexual orientation, gender identity, and transgender status, as interpreted under relevant federal nondiscrimination statutes and judicial precedent.

SUBJECT: ADDRESSING ANTISEMITISM AND HATE WITHIN THE OSTEOPATHIC COMMUNITY

SUBMITTED BY: Maryland Association of Osteopathic Physicians

REFERRED TO: Ad Hoc Committee

WHEREAS, the osteopathic medical profession is committed to upholding the principles of human dignity, respect, and compassionate care for all people; and

WHEREAS, incidents of antisemitism have risen nationally in recent years, affecting Jewish patients, students, physicians, and communities; and

~~WHEREAS, concerns have been raised within the osteopathic community regarding instances of antisemitism occurring at or involving osteopathic medical schools and affiliated institutions;~~

WHEREAS, in the summer of 2025 ~~2023~~, an employee of the American Osteopathic Information Association (AOiA) was **CHARGED WITH** ~~arrested after~~ committing a violent attack targeting a Jewish institution ~~that occurred during an osteopathic meeting~~, an act that federal authorities described as terrorism; and

~~WHEREAS, members of the osteopathic profession expressed concern that the AOA did not issue a direct acknowledgment of antisemitism in connection with this incident, did not name the victims, and instead released a general "Live/Love/DO" message that did not address the nature of the attack or the specific harm to the Jewish community; and~~

~~WHEREAS, the absence of a clear response to antisemitism following this event left many osteopathic physicians, students, and community members feeling unseen, unsupported, and unsafe; and~~

WHEREAS, THE UNITED STATES, THE CITY OF CHICAGO, (HOME OF THE AOA), AND MANY OTHER ORGANIZATIONS INCLUDING PRIVATE COMPANIES, PUBLIC COMPANIES AND UNIVERSITIES HAVE FORMALLY ADOPTED THE INTERNATIONAL HOLOCAUST REMEMBRANCE ALLIANCE'S (IHRA) DEFINITION OF ANTISEMITISM TO ENSURE THAT A CLEAR STANDARD OF BEHAVIOR IS ESTABLISHED, AND

~~WHEREAS, an additional concern has been raised regarding the selection of speakers for AOA-sponsored events, including OMED, where an invited~~

~~presenter has been publicly associated with rhetoric or positions perceived by many as anti-Israel or antisemitic; and~~

~~WHEREAS, the use of inflammatory, dehumanizing, or hateful language—such as labeling individuals or groups as "baby-killers," "genociders," or similar terms—has been reported within professional and educational settings, contributing to a hostile environment and undermining the values of the osteopathic profession; and~~

WHEREAS, the AOA has an ethical responsibility to foster a safe, inclusive, and respectful environment for all members, including Jewish physicians, students, and patients; and

WHEREAS, training and education from qualified experts can help the profession better identify, understand, and respond to antisemitism and all forms of hate, bias, and discrimination now, therefore be it

RESOLVED, THAT THE AMERICAN OSTEOPATHIC ASSOCIAITON (AOA) ADOPTS THE CURRENT INTERNATIONAL HOLOCAUST REMEMBERANCE ALLIANCE (IHRA) DEFINITION OF ANTI-SEMITISM[1], AND

~~RESOLVED, that that the American Osteopathic Association (AOA) formally acknowledge the concerns raised by members regarding antisemitism within the profession and the impact of the lack of a direct response to the 2023 attack targeting a Jewish institution; and, be it further~~

~~RESOLVED, that the AOA commit to addressing antisemitism explicitly and directly as part of its broader efforts to combat hate, discrimination, and harassment in all forms; and, be it further~~

~~RESOLVED, that the AOA partner with a nationally recognized Jewish organization with expertise in antisemitism education—such as one specializing in hate prevention, bias training, and community safety—to develop and provide optional training for AOA leadership, osteopathic medical schools, and the broader osteopathic community; and, be it further~~

RESOLVED, that the AOA ~~review its speaker selection processes for OMED and other official events to~~ ensure that invited presenters uphold the profession's standards of respect, inclusivity, and avoidance of hate-based rhetoric; and, be it further

~~RESOLVED, that such training include guidance on identifying antisemitism, understanding its contemporary manifestations, responding appropriately to incidents, and fostering environments where all individuals feel safe and respected; and, be it further~~

68 ~~RESOLVED, that the AOA review its speaker selection processes for OMED and~~
69 ~~other official events to ensure that invited presenters uphold the profession's~~
70 ~~standards of respect, inclusivity, and avoidance of hate-based rhetoric; and,~~
71 ~~be it further~~

72 ~~RESOLVED, that the AOA develop and disseminate clear guidelines discouraging~~
73 ~~the use of dehumanizing or hateful language—including terms such as~~
74 ~~"baby-killers," "genociders," or similar rhetoric—within professional,~~
75 ~~educational, and organizational settings; and, be it further~~

76 RESOLVED, that the AOA reaffirm its commitment to creating a professional
77 environment in which Jewish members, and all members, feel valued,
78 protected, and supported.

SUBJECT: DEFINING ANTISEMITISM

SUBMITTED BY: Florida Osteopathic Medical Association, Maryland Association of Osteopathic Physicians and Kansas Association of Osteopathic Medicine

REFERRED TO: Committee on Constitution & Bylaws

---

1 WHEREAS, based on 2020 Pew Research data, Jewish people represented
2 approximately 2.5% of the United States population, yet, according to the
3 Federal Bureau of Investigation's (FBI) Uniform Crime Reporting (UCR)
4 Program, in 2024, 16% of all hate crimes were anti-Jewish[1]; and

5 WHEREAS, according to the FBI's UCR Program, 69% of hate crimes motivated by
6 a religious bias in 2024 were anti-Jewish, more than seven times higher than
7 any other group[1]; and

8 WHEREAS, when healthcare providers or their institutions publicly make antisemitic
9 remarks, promote acts or displays of antisemitism, or commit antisemitic
10 violence it disparages their respective professions in the eyes of the public
11 and may lead to greater distrust of their professions as a whole; and

12 WHEREAS, persons making antisemitic statements often seek to justify their
13 behavior by challenging the definition of antisemitism[2]; and

14 WHEREAS, the American Osteopathic Association embodies a philosophy of non
15 discrimination as promulgated in the Osteopathic Oath, the Osteopathic
16 Pledge of Commitment, The AOA Code of Ethics and current AOA policy
17 (see H511-A/24 as an example); and

18 WHEREAS, the AOA does not have a working definition of antisemitism to
19 standardize the evaluation of ethics complaints, or to establish an expected
20 standard of behavior; and

21 WHEREAS, the United States, the City of Chicago, home of the AOA, and many
22 other organizations including private companies, public companies and
23 universities have formally adopted the International Holocaust Remembrance
24 Alliance's (IHRA) definition of antisemitism to ensure that a clear standard of
25 behavior is established; now, therefore be it

26 RESOLVED, that the American Osteopathic Association (AOA) adopts the
27 International Holocaust Remembrance Alliance's (IHRA) definition of
28 antisemitism (see Appendix I); and, be it further

29 RESOLVED, that the AOA encourages all Osteopathic organizations to adopt the
30 IHRA definition of antisemitism.

APPENDIX I:
International Holocaust Remembrance Alliance definition of antisemitism:
Contemporary examples of antisemitism in public life, the media, schools, the workplace, and in the religious sphere could, taking into account the overall context, include, but are not limited to:

1. Calling for, aiding, or justifying the killing or harming of Jews in the name of a radical ideology or an extremist view of religion.
2. Making mendacious, dehumanizing, demonizing, or stereotypical allegations about Jews as such or the power of Jews as collective — such as, especially but not exclusively, the myth about a world Jewish conspiracy or of Jews controlling the media, economy, government or other societal institutions.
3. Accusing Jews as a people of being responsible for real or imagined wrongdoing committed by a single Jewish person or group, or even for acts committed by non-Jews.
4. Denying the fact, scope, mechanisms (e.g. gas chambers) or intentionality of the genocide of the Jewish people at the hands of National Socialist Germany and its supporters and accomplices during World War II (the Holocaust).
5. Accusing the Jews as a people, or Israel as a state, of inventing or exaggerating the Holocaust.
6. Accusing Jewish citizens of being more loyal to Israel, or to the alleged priorities of Jews worldwide, than to the interests of their own nations.
7. Denying the Jewish people their right to self-determination, e.g., by claiming that the existence of a State of Israel is a racist endeavor.
8. Applying double standards by requiring of it [Israel] a behavior not expected or demanded of any other democratic nation.
9. Using the symbols and images associated with classic antisemitism (e.g., claims of Jews killing Jesus or blood libel) to characterize Israel or Israelis.
10. Drawing comparisons of contemporary Israeli policy to that of the Nazis.
11. Holding Jews collectively responsible for actions of the state of Israel.

106th ANNUAL AOA HOUSE OF DELEGATES MEETING
2026 RESOLUTION ROSTER (700 SERIES)
As of 07-18-26

HOUSE OF DELEGATES REFERENCE COMMITTEE DESCRIPTION:
Joint Board/House Budget Review Committee (700 series)
This committee reviews the AOA Strategic Plan and Budget.

Res. No.	Resolution Title	Submitted By	Reference Committee	With Action
H-700	Approval to Concur with the AOA FY 2027 Expenditures	Finance Committee	Joint Board House Budget Review Committee	Adopted
H-701	2026-2029 AOA Strategic Plan, Vision and Mission Statements	Strategic Planning Committee	Joint Board House Budget Review Committee	Adopted

SUBJECT: Approval to Concur with the AOA FY 2027 Annual Budget

SUBMITTED BY: AOA Finance Committee

REFERRED TO: Joint Board/House Budget Review Committee

WHEREAS the AOA Association's Bylaws Article VII section 1 c. includes that the Board of Trustees "have the responsibility of management of the finances of the Association and shall authorize and supervise, the House of Delegates concurring, with the annual budget for the fiscal year"; and

WHEREAS, the Joint Board/House Budget Review Committee has convened, reviewed, and approved the AOA FY 2027 Operating Budget, the AOA FY 2027 Capital Expenditures Budget and the AOA FY 2027 142 E. Ontario Building Budget reports as submitted; now therefore be it

RESOLVED, the American Osteopathic Association House of Delegates concurs with the AOA FY 2027 Annual Budget as provided.

EXPLANATORY STATEMENT: FY28 JOINT BOARD/HOUSE BUDGET REVIEW — TWO-YEAR LOOK BACK

AS PART OF THE FY28 JOINT BOARD AND HOUSE BUDGET REVIEW, THE PRESENTATION WILL INCORPORATE A TWO-YEAR LOOK BACK PERIOD COVERING FY26 AND FY27 ACTUAL PERFORMANCE ALONGSIDE THE FY28 PROPOSED BUDGET. THIS RETROSPECTIVE WINDOW IS INTENDED TO PROVIDE THE BOARD AND HOUSE WITH HISTORICAL CONTEXT FOR EVALUATING CURRENT-YEAR ASSUMPTIONS, VARIANCE TRENDS, AND THE TRAJECTORY OF KEY FINANCIAL AND OPERATIONAL METRICS.

THIS LOOK-BACK PERIOD IS INTENDED TO PROMOTE TRANSPARENCY IN THE BUDGET REVIEW PROCESS WHILE RESPECTING THE APPROPRIATE BALANCE BETWEEN GOVERNANCE OVERSIGHT AND OPERATIONAL MANAGEMENT — PROVIDING SUFFICIENT CONTEXT FOR INFORMED BOARD AND HOUSE REVIEW WITHOUT EXTENDING INTO THE DAY-TO-DAY OPERATIONAL DECISION-MAKING THAT REMAINS WITHIN MANAGEMENT'S PURVIEW.

BEGINNING WITH THE FY28 REVIEW, THIS TWO-YEAR LOOK-BACK FORMAT WILL SERVE AS THE STANDARD STRUCTURE FOR FUTURE JOINT BOARD/HOUSE BUDGET PRESENTATIONS, ENSURING CONSISTENCY AND COMPARABILITY ACROSS REVIEW CYCLES GOING FORWARD.

SUBJECT: 2026-2029 AOA STRATEGIC PLAN, VISION AND MISSION STATEMENTS

SUBMITTED BY: Strategic Planning Committee

REFERRED TO: Joint Board House Budget Committee

WHEREAS, the American Osteopathic Association's (AOA) Strategic Plan is revised and updated approximately every three years; and

WHEREAS, the Strategic Planning Committee developed the 2026-2029 AOA Strategic Plan with input from the AOA Board of Trustees, members, staff, osteopathic affiliate leaders, and leaders from stakeholder organizations, and the plan is provided as Exhibit A; and

WHEREAS, the AOA Board of Trustees approved the 2026-2029 AOA Strategic Plan and the Vision and Mission statements during the February 2026 Midyear Meeting; ~~now, therefore be it~~ **AND**

WHEREAS, THE JOINT BOARD/HOUSE BUDGET REVIEW COMMITTEE HAS CONVENED, REVIEWED, AND APPROVED THE 2026-2029 AOA STRATEGIC PLAN, AND THE VISION AND MISSION STATEMENTS; NOW, THEREFORE BE IT

RESOLVED, that the American Osteopathic Association (AOA) House of Delegates concurs with the 2026-2029 AOA Strategic Plan, Vision and Mission statements.

STRATEGIC PLAN 2026-2029

Your Journey. Our Shared Commitment.

1

Support the Career Journey of Osteopathic Physicians and Students Around the World

2

Communicate the Value of Osteopathic Medicine

3

Strengthen the osteopathic body of knowledge through education and research

4

Invest in physician leadership development

AMERICAN OSTEOPATHIC ASSOCIATION

Proposed 2026-2029 Strategic Plan

★ Goal 1	Statement of Success
Support the Career Journey of Osteopathic Physicians and Students Around the World	Osteopathic physicians and students utilize AOA programs and services that support the education and practice continuum through lifelong learning. (UME, GME, CME, Certification). Osteopathic physicians choose to validate competency through board certification, and maintain competency through easily accessible high-quality, relevant, robust CME experiences (Lifelong Learning) and osteopathic continuous certification.

Goal 1 Strategy	Statement of Success
1. Support future DOs through the medical education continuum of UME, GME, and CME, collaborating with various stakeholders when appropriate, by providing services, information, and support relevant to all stages of education and training.	Engage future DOs early in their journey by serving as a trusted resource throughout the medical education continuum. Educate and promote financial stewardship and overall health and well-being for AOA members. Strengthen the partnership with AACOM and COCA to continue to successfully build a stronger education pathway for future osteopathic physicians (DOs).
2. Educate students, residents and program directors to recognize the relevance of AOA board certification and osteopathic distinctiveness.	Increase the number of osteopathic residents who maintain AOA membership and take AOA board certification. Effectively market to all ACGME programs, focusing on the distinct communication needed to reach program directors and residents, advocating for osteopathic recognition in GME programs. Offer programs that create greater student and resident pride in the osteopathic profession.
3. Continue to grow the OMED conference.	Implement the OMED divisional society (state) participation program focusing on small to mid-sized states. Enhance the Resident and New Physicians in Practice tracks. Increase the number of Specialty Colleges participating in-person.
4. Collaborate with specialties and divisional societies to continue to offer quality, cost-effective osteopathic CME that does not hinder or burden the affiliates.	Engage with specialties and divisional societies to develop mutually beneficial CME offerings. Highlight all specialties and divisional societies in CME programming.
5. Strengthen the osteopathic continuum from Student through the New Physician in Practice.	Support a stronger and smoother transition experience from osteopathic medical student to resident to attending. Increase engagement with osteopathic medical students, residents, fellows and new physicians in practice to make AOA membership invaluable.

AMERICAN OSTEOPATHIC ASSOCIATION

Proposed 2026-2029 Strategic Plan

★ Goal 2	Statement of Success
Communicate the Value of Osteopathic Medicine	The AOA demonstrates, bolsters, and advances the distinctiveness of osteopathic medicine globally and its role in optimizing public health.

Goal 2 Strategy	Statement of Success
1. Expand public awareness of the value of osteopathic medicine.	Increase 'Find a DO' search metrics. Increase patient testimonials.
2. Protect and advocate for expanded international practice rights and the distinct value of DO licensing boards.	Increase the international recognition of the equivalence of AOA board certification and AOA accredited GME. Maintain current number of separate osteopathic state licensing boards.
3. Highlight excellence and accomplishments by osteopathic physicians and those supporting the osteopathic journey.	Create an increased feeling of pride and loyalty by those within the osteopathic profession and a greater sense of trust by the public. Amplify the visibility of osteopathic physicians and students in national media outlets.

AMERICAN OSTEOPATHIC ASSOCIATION

Proposed 2026-2029 Strategic Plan

★ Goal 3	Statement of Success
Strengthen the osteopathic body of knowledge through education and research	The AOA develops, cultivates, and disseminates empirical evidence that demonstrates the efficacy of osteopathic medicine on patient outcomes. The knowledge base of osteopathic medicine increases and positively impacts evidence-based outcomes.

Goal 3 Strategy	Statement of Success
1. Strengthen osteopathic education and competency standards	Support consistent integration of osteopathic philosophy, principles, and practice (OPP/OMM) across UME, GME, certification and CME so all physicians graduate and train with a strong, shared foundation in whole-person, osteopathic care.
2. Advance and expand osteopathic research infrastructure	Build sustainable pathways for high-quality osteopathic research Grow the impact and visibility of osteopathic evidence in peer-reviewed journals and clinical practice.
3. Promote innovation in osteopathic training models and partnerships	Expand access to osteopathic education and strengthen the pipeline of osteopathically trained physicians, and demonstrate the value of osteopathic medicine in diverse healthcare settings.
4. Strengthen osteopathic research and research opportunities	Increase NIH funding for DOs, COMs and COM faculty. Increase the number of DO and COM scientists represented on NIH Study Sections and Advisory Panels.

AMERICAN OSTEOPATHIC ASSOCIATION

Proposed 2026-2029 Strategic Plan

★ Goal 4	Statement of Success
Invest in physician leadership development	The AOA establishes and curates timely leadership experiences throughout an osteopathic physician's career lifecycle.

Goal 4 Strategy	Statement of Success
1. Advocate for greater leadership opportunities for osteopathic students and physicians.	Increase the number of osteopathic representatives serving in leadership roles in partner organizations and external entities.
2. Expand leadership opportunities for early career osteopathic physicians.	Expand the leadership experiences within the Bureau of Emerging Leaders (BEL). Increase AOA and specialties and divisional societies engagement with Residents, Fellows, and New Physicians in Practice.
3. Increase the engagement of osteopathic medical students in the AOA.	Encourage COMs to support SOMA chapters. Increase the number of osteopathic medical student members that participate in in-person AOA activities.

Vision and Mission Statements

Approved by the AOA BOT 9/25/25

Vision Statement

To be the global leader and unifying home for the osteopathic profession.

Mission Statement

To advance the distinctive philosophy and practice of osteopathic medicine by supporting physicians and students through advocacy, leadership, education, certification, research and innovation; promoting wellness, whole person care, and improved health outcomes.

---

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau of Osteopathic Education has reviewed the policy and
3 determined that it remains relevant; now, therefore be it

4 RESOLVED, that the Bureau of Osteopathic Education recommends that the
5 following policy be REAFFIRMED.

6 The American Osteopathic Association (AOA) advocates for the elimination of
7 limitations on the number of funded graduate medical education positions to
8 accommodate increases in US medical school enrollment; places great emphasis
9 on establishing graduate medical education opportunities for osteopathic medical
10 school graduates in geographic areas that lack adequate training capacity and as
11 needed to meet future workforce needs.

SUBJECT: BLUE RIBBON COMMISSION REPORT - SOURCE: H205-A/20

SUBMITTED BY: Bureau of Osteopathic Education

REFERRED TO: Committee on Educational Affairs

---

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau of Osteopathic Education has reviewed the policy; and

3 WHEREAS, only college of osteopathic medicine (COM) has pursued an innovative
4 pilot program, but it does not follow all of the recommendations in the Blue
5 Ribbon Commission; and

6 WHEREAS, the Bureau of Osteopathic Education has contacted the leadership of
7 the COM and confirmed the first cohort is now board certified; and

8 WHEREAS, the Bureau of Osteopathic Education believes the monitoring of pilot
9 programs "to produce primary care, competency-based physician team
10 leaders" is the responsibility of the AOA Commission on Osteopathic College
11 Accreditation (COCA); and

12 WHEREAS, the Bureau of Osteopathic Education, with support from this COM's
13 leadership, determined this resolution is no longer applicable; now, therefore
14 be it

15 RESOLVED, that the Bureau of Osteopathic Education recommends that the
16 following policy be SUNSET.

17 The American Osteopathic Association (AOA) encourages colleges of osteopathic
18 medicine to collaborate with appropriate regulatory authorities, licensing boards,
19 certifying boards, the National Board of Osteopathic Medical Examiners, and other
20 stakeholders in their pursuit of innovative pilot studies to produce primary care,
21 competency-based physician team leaders and the AOA will monitor the outcomes
22 of these pilot programs and the route to board certification.

23 To inform their recommendation, the BOE first asked AOA to reach out to any pilot
24 programs currently in existence to provide information. One COM has a pilot
25 program and one cohort has completed medical school and family medicine
26 residency and they are all now AOBFP and/or ABFM certified. Since this
27 resolution's approval, only one school has pursued an innovative pilot program. The
28 BOE sought input from this COM's leadership on this resolution and they support
29 sunset. The monitoring of pilot programs "to produce primary care, competency-
30 based physician team leaders" is the responsibility of the AOA Commission on
31 Osteopathic College Accreditation (COCA).

SUBJECT: CLASSIFICATION OF OSTEOPATHIC MEDICAL GRADUATES AS US MEDICAL GRADUATES IN ~~ERAS~~ **RESIDENCY/FELLOWSHIP APPLICATION SERVICES** – Source: H230-A/19

SUBMITTED BY: Bureau of Osteopathic Education

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Bureau of Osteopathic Education (BOE) submitted H-210 A/24 Classification of Osteopathic Medical Graduates as U.S. Medical Graduates in ERAS (Source H-230 A/19) to the 2024 House of Delegates and recommended that it be sunset; and

WHEREAS, the 2024 House of Delegates referred this policy back to BOE to update the policy to include other residency application services; and

WHEREAS, the BOE has reviewed the policy and revised it to be inclusive of additional residency application services; now, therefore be it

RESOLVED, that the BOE recommends that the following policy be REAFFIRMED AS AMENDED.

Classification of Osteopathic Medical Graduates as U.S. **OSTEOPATHIC** Medical Graduates in ~~ERAS~~ **RESIDENCY/FELLOWSHIP APPLICATION SERVICES** (Source H-230 A/19)

The American Osteopathic Association advocates to ~~the American Association of Medical Colleges to adjust Electronic~~ **ALL** Residency/**FELLOWSHIP** Application Services **ADJUST** filters based on medical school type such that Osteopathic applicants are included and recognized within the U.S. **DO/OSTEOPATHIC** ~~Public or Private~~ Medical Graduates category**IES**.

Explanatory Statement: Following the adoption of this resolution in 2019, AOA staff met with Electronic Residency Application Service (ERAS) staff to advocate for a change to the medical school type listing in ERAS.

2019 ERAS medical school type	**2020-present ERAS medical school type**
Canadian	Canadian School
International	International School
Osteopathic	US D.O. School
US Private School	US M.D. Private School
US Public School	US M.D. Public School

The BOE supports the current listing in ERAS and believes that osteopathic medical schools should be distinctly listed and recommends the policy language be broadened to all residency application services.

SUBJECT: OSTEOPATHIC MEDICAL SCHOOL EDUCATION
-SOURCE: REFERRED H224-A/24

SUBMITTED BY: Bureau of Osteopathic Education

REFERRED TO: Committee on Educational Affairs

WHEREAS, the Maryland Association of Osteopathic Physicians submitted resolution H-224 A/24 Osteopathic Medical School Education to the 2024 House of Delegates; and

WHEREAS, the 2024 House of Delegates referred this resolution to the Bureau of Education (BOE) to review the proposed resolution following the release of the AACOM/ACGME/AAMC shared Foundational Core Competencies for Undergraduate Medical Education; and

WHEREAS, the BOE has reviewed the resolution and shared competency document; now, therefore be it

RESOLVED, that the BOE recommends that the following resolution be APPROVED as policy.

Osteopathic Medical School Education

~~RESOLVED, that the American Osteopathic Association work to define the specific competencies taught to DO students that differentiate DO education, and;~~

~~RESOLVED, that the AOA engage subject matter experts engaged in osteopathic medical education to delineate the details of the difference in educational experiences to include pathways for MD's to acquire the skills mastered by DO students.~~

THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) RECOGNIZES THAT IT IS IN THE BEST INTEREST OF OSTEOPATHIC MEDICINE TO INCORPORATE OSTEOPATHIC PRINCIPLES AND PRACTICE (OPP) INTO ALL THE SHARED FOUNDATIONAL CORE COMPETENCIES FOR UNDERGRADUATE MEDICAL EDUCATION SINCE OPP IS THE ESSENTIAL FOUNDATION TO EACH AND EVERY ASPECT OF THE EVALUATION, DIAGNOSIS AND CARE OF OUR PATIENTS. THE AOA STRONGLY SUPPORTS AND ENCOURAGES THE INTEGRATION OF OPP INTO ALL OF THE SHARED FOUNDATIONAL CORE COMPETENCIES FOR UNDERGRADUATE MEDICAL EDUCATION IN COLLEGES OF OSTEOPATHIC MEDICINE (COMS).

SUBJECT: ~~ADDRESSING COMLEX-USA DISCRIMINATION IN FAMILY MEDICINE RESIDENCY PROGRAMS AND PROMOTE~~ **PROMOTING** TRANSPARENCY FOR OSTEOPATHIC MEDICAL STUDENTS

SUBMITTED BY: American College of Osteopathic Family Physicians (ACOFP)

REFERRED TO: Committee on Educational Affairs

WHEREAS, osteopathic medicine is one of the fastest growing segments of healthcare in the United States, representing more than 11% of US physicians, and Colleges of Osteopathic Medicine currently educate more than 35,000 physicians, 25% of all U.S. medical students [1]; and

WHEREAS, the Comprehensive Osteopathic Medical Licensing Examination of the United States (COMLEX-USA) is the licensing exam series required by the Commission on Osteopathic College Accreditation (COCA) to be taken by all osteopathic (DO) medical students in order to graduate from COCA-accredited medical schools [2]; and

WHEREAS, the United States Medical Licensing Examination (USMLE) is the licensing exam series taken by all allopathic (MD) medical students [3]; and

WHEREAS, the COMLEX-USA and USMLE are ~~equivalent medical licensing exams~~ **BOTH VALIDATED LICENSING EXAMS FOR THEIR RESPECTIVE EXAMINEES**, ~~supported by published predictive validity and score concordance studies [4];~~ and

WHEREAS, despite, from 2015 to 2020, residency training consolidation under a single accreditor, the Accreditation Council for Graduate Medical Education (ACGME) for all US residency and fellowship programs, many US residency programs do not report both minimum COMLEX-USA and USMLE scores [5, 6]; and

~~WHEREAS, many prospective osteopathic family medicine students wish to do their best to get into their preferred programs; and~~

~~WHEREAS, there are current efforts, such as The Fair Access in Residency (FAIR) Act introduced to the 118th Congress in 2023-2024 [7]; and~~

~~WHEREAS, 63.79% of graduated DO students in 2022 and 60.80% of graduated DO students took USMLE 1 [8-10]; and~~

~~WHEREAS, 71.19% of graduated DO students in 2020 and 59.71% of graduated DO students took USMLE 2 [8-10]; and~~

WHEREAS, most osteopathic students take the USMLE to gain ~~advantage~~ **PERCEIVED PARTIY** in residency selection, but at a financial and mental strain [11-12]; and

WHEREAS, osteopathic students ~~are~~ **MAY BE** unaware of measures to advocate for themselves and their osteopathic distinctiveness and the COMLEX-USA [13]; ~~and~~ **NOW THEREFORE BE IT**

~~WHEREAS, family medicine residency programs can help alleviate these strains and provide more transparency for qualified and interested osteopathic family physicians in their journeys to residency; now, therefore be it~~

RESOLVED, that the American Osteopathic Association (AOA) **CONTINUES** to advocate for residency programs to provide yearly statistics ~~on~~ **TO PROSPECTIVE** ~~their incoming~~ **RESIDENCY APPLICANTS.** ~~residency classes, examples including but not limited to, the mean Comprehensive Osteopathic Medical Licensing Examination of the United States (COMLEX-USA) score of accepted students, the percentage of DO students accepted, and the percentage of accepted DO residents that took United States Medical Licensing Examinations (USMLE); and, be it further~~

~~RESOLVED, that the AOA encourages osteopathic medical students and graduates to report any instances of COMLEX-USA discrimination from family medicine residency programs to the AOA and to the National Board of Osteopathic Medical Examiners (NBOME) to assist in increasing the number of DO medical trainees accepted into their desired family medicine residency programs.~~

Background Information: Provided by AOA Staff

The ACGME Case Log System is a web application within Accreditation Data System (ADS) where residents and fellows (in certain specialties) are required to log their clinical experiences on an individual case basis. Depending on the specialty, the components used to build these cases are Common Procedural Terminology (CPT) codes, International Classification of Diseases (ICD9) codes, and/or descriptors.

SUBJECT: GME EQUITY ANNUAL REPORT - SOURCE: H345-A/23

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Educational Affairs

WHEREAS, the 2023 House of Delegates adopted Policy H345-A/23 – AOA Support for GME Equity; and

WHEREAS, Policy H345-A/23 – AOA Support for GME Equity requires the AOA Board of Trustees to provide a report to the House of Delegates; now therefore be it

RESOLVED, that the 2025 House of Delegates accept the AOA Board of Trustees GME Equity 2025 Annual Report as outlined.

2025 GME Equity Annual Report

As the professional home for over 38,000 osteopathic medical students and 31,000 osteopathic residents and fellows, the American Osteopathic Association (AOA) remains steadfast in its commitment to identifying and addressing systemic barriers that hinder equitable access to graduate medical education opportunities for the osteopathic medical profession. Throughout the year, the AOA continued its collaborative efforts with the American Association of Colleges of Osteopathic Medicine (AACOM) and the National Board of Osteopathic Medical Examiners (NBOME) to promote universal acceptance of the COMLEX-USA licensing exam, advocate for equitable evaluation of DO applicants, reduce systemic biases in medical training environments, and advance recognition of osteopathic credentials across all levels of medical education. AOA leaders remain active participants in the Joint Osteopathic Organization Leadership coalition, which meets regularly to address shared priorities including student parity, professional advocacy, and the future of osteopathic medical education.

In March 2025, the AOA, in continued partnership with the AACOM, convened a second annual Student Parity Summit. AOA President Teresa A. Hubka, DO, and CEO Kathleen S. Creason, MBA, led the meeting alongside leaders from national organizations including the American Medical Association, the Association of American Medical Colleges, the National Resident Matching Program, and for the first time, the Accreditation Council for Graduate Medical Education. The summit focused on the ongoing perception of bias against the DO degree in residency selection, the need for comprehensive data to better understand and address disparities, the development of immediate non-legislative strategies to improve parity, and the pursuit of long-term sustainable solutions to ensure equal opportunity for all medical students.

Following the Student Parity Summit, the AOA and AACOM submitted a letter to the ACGME recommending specific modifications to the Common Program Requirements and Sponsoring Institution Requirements aimed at addressing parity challenges faced by osteopathic medical students during the transition to residency. Additionally, the AOA, AACOM, and AAMC jointly sent a letter to the ACGME proposing the formation of a working group comprised of stakeholder organizations to celebrate successes, describe challenges, and identify opportunities to realize the true value of single GME accreditation.

Increased data transparency from stakeholders has been a key request from the AOA and the AACOM. This year, there has been an increase in available data on osteopathic medical students' applications, interview, ranking, and matching trends. From this data, the AOA has identified program directors' associations to increase engagement in the coming months facilitated through our strong partnership with the Council on Medical Specialty Societies (CMSS).

AOA staff and leadership also engaged directly with graduate medical education stakeholders to address inequities reported by osteopathic medical students. Through the dedicated do-discrimination@osteopathic.org inbox, the AOA responded to dozens of student concerns related to access to audition rotations, program acceptance of COMLEX-USA scores, and discriminatory language in program materials or communications. The extent to which inequities against DOs run afoul of the law is a state law issue and, as such, varies state by state. For this reason, in November 2024, AOA presented to osteopathic state and specialty affiliates on model state legislation the AOA has developed to support DO parity and provided guidance to state affiliates on how to advocate for stronger regulatory frameworks that protect and promote equitable treatment of osteopathic medical students and physicians. These resources are available on the AOA's affiliate workspace for easy access and the AOA remains ready to assist any state affiliates through this process.

The AOA remains unwavering in its mission to eliminate barriers to graduate medical education access and to ensure that all osteopathic medical students and residents are evaluated fairly and equitably. Through continued collaboration, advocacy, and education, the AOA is advancing a future where osteopathic medical students and physicians have equal opportunities to thrive in medical training and practice.

SUBJECT: SITE NEUTRAL REIMBURSEMENT - SOURCE: H306-A/20

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and

WHEREAS, the Bureau on Federal Health Programs believes that the policy remains relevant and now, therefore be it

RESOLVED, that the Bureau on Federal Health Programs recommends the following policy be REAFFIRMED.

Policy Statement

The American Osteopathic Association (AOA) supports that payments from all payers should reflect the resources required to provide patient care in each setting.

The AOA supports that payments for all sites of care should account for costs incurred in that setting and should take into account the nature of the patient population served by each type of provider and other factors, such as, but not limited to, the provision of care coordination, access to after-hours care, emergency care, quality activities, and regulatory compliance costs.

The AOA supports that efforts should be made to collect comprehensive and reliable data regarding the extent of actual cost differences among sites of service, the impact of current site of service differentials on patient access; the extent to which recent site of service shifts are attributable to payment differentials; and the potential impact of the elimination or reduction of such differentials on providers' ability to cover their reasonable costs.

The AOA supports that pending collection of such data, private and public payers should avoid reductions in payment that create or aggravate existing site of service differentials for services that are demonstrably similar in terms of nature, scope, and patient population.

The AOA supports that Medicare patients should be provided access to data regarding differences in copayment requirements among various sites of service.

SUBJECT: LOW BACK PAIN CLINICAL PRACTICE GUIDELINES, REVISION OF - SOURCE: H325-A20

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) continues to search for current published systematic reviews on which to base a revision of these guidelines, and is now completing a literature review to publish which will supplement the guidelines but will not be completed prior to the 2025 HOD meeting; and

WHEREAS, a BORPH task force will update the guidelines over the next year using the published literature review; and

WHEREAS, the BORPH desires to reaffirm this policy as it shall be amended, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED, and be it further

RESOLVED, to postpone the review of H325-A2020 for one year and bring back to the House of Delegates in 2026 for sunset review and approval pending a literature review and revision of the guidelines.

The American Osteopathic Association (AOA) approves the attached Guidelines for Patients with Low Back Pain.

American Osteopathic Association Guidelines for
Osteopathic Manipulative Treatment (OMT) for Patients with Low Back Pain

Executive Summary:
The American Osteopathic Association (AOA) recommends that osteopathic physicians use Osteopathic manipulative treatment (OMT) in the care of patients with low back pain. Evidence from systematic reviews and meta-analyses of randomized clinical trials (Evidence Level 1a) supports this recommendation.
1. Overview material: Provide a structured abstract that includes the guideline's release date, status (original, revised, updated), and print and electronic sources.

The current guidelines are available through the AOA web site and National Guidelines Clearinghouse, AHRQ. The guideline is partially based upon the following study:

Franke H, Franke J-D, Fryer G. Osteopathic manipulative treatment for nonspecific low back pain: a systematic review and meta-analysis. BMC Musculoskeletal Disorders 2014, 15:286 doi:10.1186/1471-2474-15-286. (Published: 30 August 2014).

The format used for this guideline is in accordance with the 2013 (Revised) Criteria for Inclusion of Clinical Practice Guidelines in NGC and uses the 2011 definition of clinical practice guideline developed by the Institute of Medicine (IOM): "Clinical practice guidelines are statements that include recommendations intended to optimize patient care that are informed by a systematic review of evidence and an assessment of the benefits and harms of alternative care options".

ABSTRACT

Background

Osteopathic manipulative treatment (OMT) is a distinctive modality commonly used by osteopathic physicians to complement conventional treatment of musculoskeletal disorders, including those that cause low back pain. OMT is defined in the Glossary of Osteopathic Terminology as: "The therapeutic application of manually guided forces by an osteopathic physician (US Usage) to improve physiologic function and/or support homeostasis that has been altered by somatic dysfunction. OMT employs a variety of techniques" (see Appendix 1 for list). Somatic dysfunction is defined as: "Impaired or altered function of related components of the somatic (body framework) system: skeletal, arthrodial and myofascial structures, and their related vascular, lymphatic, and neural elements. Somatic dysfunction is treatable using osteopathic manipulative treatment."

This guideline updates the AOA guideline for osteopathic physicians to utilize OMT for patients with nonspecific acute or chronic LBP published in 2010 on the National Guideline Clearinghouse.[1]

Methods

This guideline update process commenced with literature searches that included electronic databases, personal contact with key researchers of OMT and low back pain, and internet search engines. Early in the process, the AOA discovered the systematic literature review conducted by Franke, Franke and Fryer (2014)[2] which serves as the basis for this updated guideline.

Franke et al searched electronic databases, reference lists and personal communications. Their inclusion criteria consisted of randomized clinical trials of adults (>18 years of age) with nonspecific back pain treated by osteopathic physicians or osteopaths who used their clinical judgment as opposed to a standard predetermined protocol. Studies with pregnant and postpartum participants were also included. Studies excluded from the review were those where co-interventions were not performed on both comparison groups; the OMT intervention could not be assigned an effect size; participants had specific back pain from pathology (i.e., fracture, tumor, metastasis, inflammation, infection); or the intervention consisted of a single manual technique (see Appendix 2 for the list of references in Franke et al).

The primary outcomes for the Franke et al review were pain and functional status. The authors measured pain using the visual analogue scale (VAS), number rating scale (NRS), or the McGill Pain Questionnaire. Functional status was measured using the Roland-Morris Disability Questionnaire, Oswestry- Disability Index, or other valid instrument. The point of measurement for both outcomes was the first 3 month interval.

Studies were independently reviewed using a standardized form. The mean difference (MD) or standard mean difference (SMD) with 95% confidence intervals (CIs) and overall effect size were calculated at 3 months post treatment. GRADE approach, as recommended by the updated Cochrane Back Review Group method guidelines, was used to assess quality of evidence.

Results

The authors of the systematic review identified 307 studies. Thirty-one were evaluated and 16 excluded. Of the 15 studies included in the review, 6 were retrieved from the grey literature in Germany, 5 from the United States, 2 from the United Kingdom, and 2 from Italy. Ten studies investigated effectiveness of OMT for nonspecific LBP, 3 studies examined the effect of OMT for LBP in pregnant women, and 2 studied the effect of OMT for LBP in postpartum women. All studies reported on the effect of OMT on pain, and all but one reported on back pain specific functional status. There were a total of 1502 participants included in the qualitative and quantitative analysis.

OMT significantly reduces pain and improves functional status in patients, including pregnant and postpartum women, with nonspecific acute and chronic LBP. Franke et al found that in acute and chronic non-specific LBP, moderate-quality evidence suggested OMT had a significant effect on pain relief (MD:-12.91, 95% CI: -20.00 to -5.82) and functional status (SMD:-0.36, 95%CI: -0.58 to -0.14). More specifically, in chronic nonspecific LBP, evidence suggested a significant difference in favor of OMT regarding pain (MD:-14.93, 95%CI:-25.18 to - 4.68) and functional status (SMD:-0.32, CI:-0.58 to -0.07). When examining nonspecific LBP in pregnancy, low-quality evidence suggested a significant difference in favor of OMT for pain (MD, -23.01; 95% CI, -44.13 to -1.88) and functional status (SMD, -0.80; 95% CI, - 1.36 to - 0.23). Conversely for nonspecific LBP postpartum, Franke et al found that moderate-quality evidence suggested a significant difference in favor of OMT for pain (MD, -41.85; 95% CI, - 49.43 to -34.27) and functional status (SMD, -1.78; 95% CI, -2.21 to -1.35).[2]

Conclusions

Clinically relevant effects of OMT were found for reducing pain and improving functional status in patients with acute and chronic nonspecific LBP and for LBP in pregnant and postpartum women at 3 months post treatment.

OMT significantly reduces low back pain. The level of pain reduction is clinically important, greater than expected from placebo effects alone, and may persist through the first year of treatment. Additional research is warranted to elucidate mechanistically how OMT exerts its effects, to determine if OMT benefits extend beyond the first year of treatment, and to assess the cost-effectiveness of OMT as a complementary treatment for low back pain.

1. Focus: Describe the primary disease/condition and intervention/service/technology that the guideline addresses. Indicate any alternative preventive, diagnostic or therapeutic interventions that were considered during development.

These guidelines are intended to assist osteopathic physicians in appropriate utilization of OMT for patients with low back pain. Other alternative preventive, diagnostic and therapeutic interventions considered during development of these guidelines were those noted in the following published guidelines for physicians caring for patients with low back pain:

1) Chou R, Qaseem A, Snow V, Casey D, Cross JT Jr, Shekelle P, Owens DK: Clinical Efficacy Assessment Subcommittee of the American College of Physicians, American College of Physicians, American Pain Society Low Back Pain Guidelines Panel. Diagnosis and treatment of low back pain: a joint clinical practice guideline from the American College of Physicians and the American Pain Society. Ann Intern Med 2007 Oct 2;147(7):478-91)

BACKGROUND

Historically, low back pain has been the most common reason for visits to osteopathic physicians.[3] More recent data from the Osteopathic Survey of Health Care in America has confirmed that a majority of patients visiting osteopathic physicians continue to seek treatment

for musculoskeletal conditions.[4, 5] A distinctive element of low back care provided by osteopathic physicians is osteopathic manipulative treatment (OMT). A comprehensive evaluation of spinal manipulation for low back pain undertaken by the Agency for Health Care Policy and Research in the United States concluded that spinal manipulation can be helpful for patients with acute low back problems without radiculopathy when used within the first month of symptoms.[6]Nevertheless, because most studies of spinal manipulation involve chiropractic or physical therapy,[7]it is unclear if such studies adequately reflect the efficacy of OMT for low back pain. Although the professional bodies that represent osteopaths, chiropractors, and physiotherapists in the United Kingdom developed a spinal manipulation package consisting of three common manual elements for the UK Back pain Exercise and Manipulation (UK BEAM) trial,[8] there are no data on the comparability of profession specific outcomes.[9,10] It is well known that OMT comprises a diversity of techniques.[11] These OMT techniques are not adequately represented by the UK BEAM trial package. Professional differences in spinal manipulation are more pronounced in research studies, in which chiropractors have focused almost exclusively on high-velocity-low amplitude techniques.[12] For example, a major trial of chiropractic manipulation as adjunctive treatment for childhood asthma used a high-velocity-low amplitude thrust as the active treatment.[13] The simulated treatment provided in the sham manipulation arm of this chiropractic trial, which ostensibly was used to provide no therapeutic effect, bore a marked similarity to OMT.[12, 14] Because differences in professional background and training lend themselves to diverse manipulation approaches, clinicians have been warned about generalizing the findings of systematic reviews to practice.[15] In additional to professional differences in the manual techniques themselves, osteopathic physicians in the United States, unlike allopathic physicians or chiropractors, can treat this condition simultaneously using both conventional primary care approaches and complementary spinal manipulation. This represents a unique philosophical approach in the treatment of low back pain. Consequently, there is a need for empirical data that specifically address the efficacy of OMT for conditions such as low back pain.[16]

These guidelines are based on a systematic review of the literature on OMT for patients with low back pain and a meta-analysis of all randomized controlled trials of OMT for patients with low back pain in ambulatory settings.[2]

3. Goal: Describe the goal that following the guideline is expected to achieve, including the rationale for development of a guideline on this topic.

The goal of these guidelines is to enable osteopathic physicians as well as other physicians, other health professionals, and third party payers, to understand the evidence underlying recommendations for appropriate utilization of OMT, which is not detailed in the current sets of guidelines developed by other physicians. The American Osteopathic Association does not believe it is appropriate for other professionals to create guidelines for utilization of OMT since it is not a procedure or approach used by those physicians. It is, however, the purview and duty of the American Osteopathic Association to inform its members and the public about the appropriate utilization of OMT.

4. Users/setting: Describe the intended users of the guideline (e.g., provider types, patients) and the settings in which the guideline is intended to be used.

These guidelines are to be used by osteopathic physicians in application of OMT to patients with nonspecific low back pain, which can be defined as tension, soreness, or stiffness in the lower back region with an unidentified cause[2], in the ambulatory setting.

5. Target population: Describe the patient population eligible for guideline recommendations and list any exclusion criteria.

Patients with nonspecific low back pain of musculoskeletal origin are eligible for guideline recommendations. Patients with visceral disease conditions that refer pain to the low back are excluded from these guidelines. Other conditions of exclusion are when the following are the identified source of the low back pain: vertebral fracture; vertebral joint dislocation; muscle

tears or lacerations; spinal or vertebral joint ligament rupture; inflammation of intervertebral discs, spinal zygapophyseal facets joints, muscles or fascia; skin lacerations; sacroiliitis; ankylosing spondylitis; or masses in or from the low back structures that are the source of the pain. Exclusion from this guideline does not imply that OMT is contraindicated in these conditions.

6. Developer: Identify the organization(s) responsible for guideline development and the names/credentials/potential conflicts of interest of individuals involved in the guideline's development.

American Osteopathic Association, Bureau of Osteopathic Clinical Education and Research, Task Force on the Low Back Pain Clinical Practice Guidelines: Richard J. Snow, DO, MPH, (chair), Michael Seffinger, DO, Kendi Hensel, DO, PhD, and Rodney Wiseman, DO.

7. Funding source/sponsor: Identify the funding source/sponsor and describe its role in developing and/or reporting the guideline. Disclose potential conflict of interest.

This project was funded by the American Osteopathic Association. The AOA Bureau of Osteopathic Clinical Education and Research convened a Task Force on the Low Back Pain Clinical Practice Guidelines to revise the guidelines. Upon approval of these recommendations by the AOA Board of Trustees and the AOA House of Delegates, the guidelines will be submitted to the National Guidelines Clearinghouse for public record and access. As the guidelines were developed based on the peer reviewed scientific literature, no conflict of interest is claimed by the developers. A well rounded, objective perspective is presented. Any views from an osteopathic perspective that is not supported by the scientific literature is stated and clearly identified so the reader is able to discern any potential for bias.

8. Evidence collection: Describe the methods used to search the scientific literature, including the range of dates and databases searched, and criteria applied to filter the retrieved evidence.

This guideline update process commenced with literature searches that included electronic databases, personal contact with key researchers of OMT and low back pain, and internet search engines. Early in the process, the AOA discovered the systematic literature review conducted by Franke, Franke and Fryer (2014) which serves as the basis for this updated guideline.

Franke et al[2] searched electronic reference databases, Cochrane Central Register of Controlled Trials (CENTRAL), MEDLINE, Embase, CINAHL, PEDro, OSTMED.DR, and Osteopathic Web Research using thefollowing search terms: low back pain, back pain, lumbopelvic pain, dorsalgia, osteopathic manipulative treatment, OMT, and osteopathic medicine. In addition to the listed databases, the authors conducted searches in anongoing trial database (metaRegister of Controlled Trials. To enhance their search, the authors tracked citations of identified trials, and manually searched reference lists for other relevant papers.

The authors reviewed all the studies using a standardized form, and all mean differences (MD) and standard mean differences (SMD) were calculated with 95% confidence intervals (CIs). Overall effect size was calculated at the 3month post treatment follow-up. GRADE approach, as recommended by the updated Cochrane Back Review Group method guidelines, was used to assess quality of evidence.

9. Recommendation grading criteria: Describe the criteria used to rate the quality of evidence that supports the recommendations and the system for describing the strength of the recommendations. Recommendation strength communicates the importance of adherence to a recommendation and is based on both the quality of the evidence and the magnitude of anticipated benefits or harms.

Franke et al[2] evaluated the methodological quality of the studies using the Risk of Bias tool of the Cochrane Back Review Group. Studies were scored as 'low risk', 'high risk', or 'unclear',

and included assessments of randomization, blinding, baseline comparability between groups, patient compliance, and dropping out. Per the Cochrane Back Review Group, studies received a 'low risk' score when a minimum of 6 criteria were met and it was determined that the study had no serious flaws (e.g., a drop-out rate over 50%). Disagreements about the quality of the studies were resolved through discussion and consensus. Franke et al used Review Manager to analyze the data for the meta-analysis. The authors converted the NRS and VAS scores from the included studies to a 100-point scale for the pain measurement, and calculated the mean difference (MD) with 95% CIs for the random effects model.

Franke et al conducted other noteworthy analysis. They used the standard mean difference (SMD) was also used in a random effects model to determine functional status. The authors grouped the 1 study examining acute LBP and the 3 studies examining patients with both acute and chronic LBP together for the purpose of their meta-analyses. Overall, they created four groups: (1) acute and chronic LBP; (2) chronic LBP (duration of pain more than 3 months); (3) LBP in pregnant women; and (4) LBP in postpartum women.

Franke et al also assessed the clinical relevance of each study using the Cochrane Back Review Group recommendations. A small effect was defined as MD less than 10% of the scale and SMD less than 0.5. A medium effect was defined as MD 10% to 20% of the scale and SMD from 0.5 to 0.8. A large effect was defined as MD greater than 20% of the scale and SMD greater than 0.8.

10. Method for synthesizing evidence: Describe how evidence was used to create recommendations, e.g., evidence tables, meta-analysis, decision analysis.

Due to the applicability of the Franke et al review to this updated guideline and consequently, the reliance thereon, the AOA will describe how the authors synthesized their evidence.

OMT versus other interventions for acute and chronic nonspecific low back pain Franke et al[2] analyzed the effect of OMT for pain in acute and chronic LBP using ten studies with 12 comparison groups and 1141 participants. Six studies reported a significant effect of OMT on pain, 3 studies showed a non-significant effect, and 3 studies reported a non- significant effect in favor of the control treatment. Collectively, the studies showed moderate- quality evidence that OMT had a significant effect on pain relief (MD:-12.91, 95% CI: −20.00 to −5.82).

For functional status, the authors based their results on 9 studies with 10 comparisons groups and 1046 participants. The studies revealed moderate-quality evidence that a significant difference in favor of OMT existed (SMD:-0.36, 95%CI: −0.58 to −0.14). Four studies reported a significant effect of OMT, 3 studies reported a non- significant effect, and 1 study reported a non-significant effect in favor of the control group.

OMT versus other interventions for chronic nonspecific low back pain
For nonspecific LBP, Franke et al[2] analyzed 6 studies with 7 comparisons and 769 participants. This analysis revealed moderate-quality evidence that a significant difference in favor of OMT existed (MD:-14.93, 95%CI:-25.18 to −4.68)

For functional status outcomes, the authors reviewed 3 studies which reported a significant improvement for OMT. One study reported a non-significant effect for OMT, and 1 study reported an effect for the control group Collectively, the analysis showed moderate-quality evidence for a significant difference in favor of OMT (SMD:-0.32, CI:-0.58 to −0.07).

OMT versus usual obstetric care, sham ultrasound, and untreated for nonspecific low back pain in pregnant women
For LBP in pregnant women, the authors reviewed three studies with 4 comparisons and 242 participants. Two studies showed a significant improvement following OMT, and 1 study showed a non-significant improvement. The final analysis of these studies resulted in low-quality evidence for a significant difference in favor of OMT for LBP in pregnant women (MD,

−23.01; 95% CI, −44.13 to −1.88) and functional status (SMD, −0.80; 95% CI, −1.36 to −0.23).[2]

Hensel, et al[17] found that OMT was effective for mitigating pain and functional deterioration compared with usual care only; however, OMT did not differ significantly from placebo ultrasound treatment. The authors concluded that OMT is a safe, effective adjunctive modality to improve pain and functioning during the third trimester.

OMT versus untreated for nonspecific low back pain in postpartum women

Franke et al reviewed two studies focusing on OMT for LBP in postpartum women. Both studies reported significant improvement following OMT. The moderate-quality evidence showed a significant difference in favor of OMT for pain (MD, −41.85; 95% CI, −49.43 to −34.27) and functional status (SMD, −1.78; 95% CI, −2.21 to −1.35).

DISCUSSION

Efficacy of OMT

The overall results clearly demonstrate a statistically significant reduction in low back pain with OMT. Subgroup meta-analyses to control for moderator variables demonstrated that OMT significantly reduced low back pain vs active treatment or placebo control and vs no treatment control. If it is assumed, as shown in a review[18], that the effect size is –0.27 for placebo control vs no treatment in trials involving continuous measures for pain, then the results of our study are highly congruent (i.e., effect size for OMT vs no treatment [–0.53] = effect size for OMT vs active treatment or placebo control [–0.26] + effect size for placebo control vs no treatment [–0.27]). It has been suggested that the therapeutic benefits of spinal manipulation are largely due to placebo effects.[19] A preponderance of results from our sensitivity analyses supports the efficacy of OMT vs active treatment or placebo control and therefore indicates that low back pain reduction with OMT is attributable to the manipulation techniques, not merely placebo effects.

Also, as indicated above, OMT vs no treatment control demonstrated pain reductions twice as great as previously observed in clinical trials of placebo vs no treatment control.[18] The clinical significance of our findings is readily evident when compared with nonsteroidal anti-inflammatory drugs, including cyclo-oxygenase-2 inhibitors. A recent meta-analysis of the efficacy of these drugs included 23 randomized placebo controlled trials for osteoarthritic knee pain, representing over 10,000 subjects, and measured pain outcomes up to three months following randomization.[20] This study found an overall effect size of –0.32 (95% CI, –0.24 - –0.39) and effect size of –0.23 (95% CI, –0.16 - –0.31) when drug non-responders were not excluded from the analyses. Thus, our effect size of –0.26 (95% CI, –0.48 - –0.05) for OMT in trials vs active treatment or placebo control suggests that OMT provides an analgesic effect comparable to nonsteroidal anti-inflammatory drugs, including cyclo-oxygenase-2 inhibitors.

Unlike the meta-analysis of nonsteroidal anti-inflammatory drugs,[20] however, Licciardone et al found that OMT also significantly reduced pain during the three to 12 month period following randomization.[21] Thus, OMT for low back pain may eliminate or reduce the need for drugs that can have serious adverse effects.[22] Because osteopathic physicians provide OMT to complement conventional treatment for low back pain, they tend to avoid substantial additional costs that would otherwise be incurred by referring patients to chiropractors or other practitioners.[23]With regard to back pain, osteopathic physicians make fewer referrals to other physicians and admit a lower percentage of patients to hospitals than allopathic physicians,[3] while also treating back pain episodes with substantially fewer visits than chiropractors.[24] Although osteopathic family physicians are less likely to order radiographs or prescribe nonsteroidal anti-inflammatory drugs, aspirin, muscle relaxants, sedatives, and narcotic analgesics for low back pain than their allopathic counterparts, osteopathic physicians have a substantially higher proportion of patients returning for follow-up back care than allopathic physicians.[25] In the United Kingdom, where general practitioners may refer patients with spinal pain to osteopaths for manipulation, it has been shown that OMT improved physical and

psychological outcomes at little extra cost.[26]

Licciardone et al [27], in the Osteopathic Health outcomes In Chronic low back pain (OSTEOPATHIC) Trial studied OMT and ultrasound therapy for short term relief of nonspecific chronic low back pain. The authors found that the patients receiving OMT showed moderate to substantial improvements in low back pain which met or exceeded the Cochrane Back Review Group criterion for a medium effect size in relieving chronic low back pain.

11. Prerelease review: Describe how the guideline developer reviewed and/or tested the guidelines prior to release.

Guidelines were reviewed by the Bureau of Osteopathic Clinical Education and Research, the AOA Board of Trustees, and the AOA House of Delegates.

12. Update plan: State whether or not there is a plan to update the guideline and, if applicable, an expiration date for this version of the guideline. The guidelines will be updated every 5 years.

13. Definitions: Define unfamiliar terms and those critical to correct application of the guideline that might be subject to misinterpretation.

OMT referred specifically to manual treatment provided by osteopathic physicians, or other physicians who had demonstrated training and proficiency in OMT, such as those practitioners in Europe who may have undertaken osteopathic conversion programs

14. Recommendations and rationale: State the recommended action precisely and the specific circumstances underwhich to perform it. Justify each recommendation by describing the linkage between the recommendation and its supporting evidence. Indicate the quality of evidence and the recommendation strength, based on the criteria described in 9.

Based on this meta-analysis (evidence level 1a – see Table 1) of RCTs on OMT for patients with low back pain, it is recommended that OMT be utilized by osteopathic physicians for musculoskeletal causes of low back pain, i.e., to treat the diagnoses of somatic dysfunctions related to the low back pain.

Strength of evidence	Type of Study	Comment
1a	Systematic review with homogeneity of randomized controlled trials	Individual trials should be free of substantial variations in the directions and magnitudes of results
1b	Individual randomized controlled trial with narrow confidence interval	Confidence interval should indicate a clinically important OMT effect
1c	Differential frequency of adverse outcomes	An adverse outcome was frequently observed in patients who did not receive OMT, but was infrequently observed in patients who did receive OMT (equivalent to a small number needed to treat)
2a	Systematic review with homogeneity of cohort studies	Individual studies should be free of substantial variations in the directions and magnitudes of OMT effects

2b	Individual cohort study or low-quality randomized controlled trial	Low quality may be indicated by such factors as important differences in baseline characteristics between groups, lack of concealment of treatment allocation, and excessive losses to follow-up
3a	Systematic review with homogeneity of case-control studies	Individual studies should be free of substantial variations in the directions and magnitudes of OMT effects
3b	Individual case-control study	These should be free of substantial evidence of selection bias, information bias, or confounding variables
4	Case series and low quality cohort and case-control studies	Low quality of cohort and case control studies may be indicated by such factors as important sources of selection bias, information bias, or confounding variables
5	Expert opinion without explicit critical appraisal, or based on physiology, bench research, or "first principles"	These generally will have limited empirical data relevant to OMT effects in human populations

How to Practice and Teach EBM (3rd ed), 2005

15. Potential benefits and harms: Describe anticipated benefits and potential risks associated with implementation of guideline recommendations.

Potential benefits include but are not limited to improved care for patients seeing osteopathic physicians or practitioners for somatic dysfunctions causing low back pain. Harms have not been identified in randomized clinical trials on OMT for patients with low back pain. OMT for somatic dysfunction has not demonstrated harm in any clinical trials to date.

16. Patient preferences: Describe the role of patient preferences when a recommendation involves a substantial element of personal choice or values.

Patients have a choice of provider and services when they suffer from low back pain. OMT offers another option for care for low back pain from somatic dysfunction and can be provided by osteopathic physicians. It is utilized as an adjunct or complementary to conventional or alternative methods of treatment.

17. Algorithm: Provide (when appropriate) a graphical description of the stages and decisions in clinical care described by the guideline.

Once a patient with low back pain is diagnosed with somatic dysfunction as the cause, or contributing factor, of the low back pain, OMT should be utilized by the osteopathic physician. The diagnosis of somatic dysfunction entails a focal or complete history and physical exam, including an osteopathic structural exam that provides evidence of asymmetrical anatomical landmarks, restriction or altered range of joint motion, and palpatory abnormalities of soft tissues. OMT to treat somatic dysfunction is utilized after other potential causes of low back pain are ruled out or considered improbable by the treating physician; i.e., vertebral fracture; vertebral joint dislocation; muscle tears or lacerations; spinal or vertebral joint ligament rupture;

387 inflammation of intervertebral discs, spinal zygapophyseal facets joints, muscles or fascia; skin
388 lacerations; sacroiliitis; ankylosing spondylitis; masses in or from the low back structures; or
389 organic (visceral) disease referring pain to the back or causing low back muscle spasms.

390 **NOTE FROM STAFF: PLEASE GO TO PAGE 20 TO VIEW ALGORITHM.**

391

392 18.Implementation considerations: Describe anticipated barriers to application of the
393 recommendations. Provide reference to any auxiliary documents for providers or patients that
394 are intended to facilitate implementation. Suggest review criteria for measuring changes in
395 care when the guideline is implemented.

396 One of the barriers to application of the recommendations cited by osteopathic physicians has
397 been poor reimbursement for OMT.[28] However, Medicare has reimbursed osteopathic
398 physicians for this procedure (ICD-9 code: 98926-9), for over 30 years. Many osteopathic
399 physicians apparently do not utilize OMT in clinical practice due to a number of barriers,
400 including time constraints, lack of confidence, loss of skill over time from disuse, and
401 inadequate office space.[28] Some specialists, i.e., pathologists and radiologists, do not use OMT
402 as it is not applicable to their duties within their specialty. The AOA believes patients with low
403 back pain should be treated with OMT given the high level of evidence that supports its
404 efficacy. Changes in care when this guideline is implemented will be determined by physician
405 and patient surveys, billing and coding practice patterns amongst osteopathic physicians, data
406 gathered from osteopathic physicians via the AOA's Clinical Assessment Program, and other
407 registry data gathering tools currently being developed by researchers.

Appendix 1

DEFINITION OF TERMS USED

Glossary of Osteopathic Terminology, Revised November 2011. Reprinted with permission from the American Association of Colleges of Osteopathic Medicine. All rights reserved.

To download the complete Glossary, please go to http://www.aacom.org/news-and- events/publications/glossary-of-osteopathic-terminology

osteopathic manipulative treatment (OMT): The therapeutic application of manually guided forces by an osteopathic physician (U.S. usage) to improve physiologic function and/or support homeostasis that has been altered by somatic dysfunction. OMT employs a variety of techniques including:

active method, technique in which the person voluntarily performs an osteopathic practitioner-directed motion.

articulatory treatment, (Archaic). See *osteopathic manipulative treatment, articulatory treatment system.*

articulatory (ART), a low velocity/ moderate to high amplitude technique where a joint is carried through its full motion with the therapeutic goal of increased range of movement. The activating force is either a repetitive springing motion or repetitive concentric movement of the joint through the restrictive barrier.

balanced ligamentous tension (BLT), 1. According to Sutherland's model, all the joints in the body are balanced ligamentous articular mechanisms. The ligaments provide

proprioceptive information that guides the muscle response for positioning the joint, and the ligaments themselves guide the motion of the articular components. (*Foundations* **Chapman reflex,** See *Chapman reflex.*

combined method, 1. A treatment strategy where the initial movements are indirect; as the technique is completed the movements change to direct forces. 2. A manipulative sequence involving two or more different osteopathic manipulative treatment systems (e.g., Spencer technique combined with muscle energy technique). 3. A concept described by Paul Kimberly, DO.

combined treatment, (Archaic). See *osteopathic manipulative treatment, combined method.*

compression of the fourth ventricle (CV-4), a cranial technique in which the lateral angles of the occipital squama are manually approximated slightly exaggerating the posterior convexity of the occiput and taking the cranium into sustained extension.

counterstrain (CS), 1. A system of diagnosis and treatment that considers the dysfunction to be a continuing, inappropriate strain reflex, which is inhibited by applying a position of mild strain in the direction exactly opposite to that of the reflex; this is accomplished by specific directed positioning about the point of tenderness to achieve the desired therapeutic response. 2. Australian and French use: Jones technique, (correction spontaneous by position), spontaneous release by position. 3. Developed by Lawrence Jones, DO in 1955 (originally "Spontaneous Release by

Positioning," later termed "strain-counterstrain").

cranial treatment (CR), See *primary respiratory mechanism.* See *osteopathy in the cranial field.*

CV-4, abbreviation for compression of the fourth ventricle. See *osteopathic manipulative treatment, compression of the fourth ventricle.*

Dalrymple treatment, See *osteopathic manipulative treatment, pedal pump.*

direct method (D/DIR), an osteopathic treatment strategy by which the restrictive barrier is engaged and a final activating force is applied to correct somatic dysfunction.

exaggeration method, an osteopathic treatment strategy by which the dysfunctional component is carried away from the restrictive barrier and beyond the range of voluntary motion to a point of palpably increased tension.

exaggeration technique, an indirect procedure that involves carrying the dysfunctional part away from the restrictive barrier, then applying a high velocity/low amplitude force in the same direction.

facilitated oscillatory release technique (FOR), 1. A technique intended to normalize neuromuscular function by applying a manual oscillatory force, which may be combined with any other ligamentous or myofascial technique. 2. A refinement of a long-standing use of oscillatory force in osteopathic diagnosis and treatment as published in early osteopathic literature. 3. A technique developed by Zachary Comeaux, DO.

facilitated positional release (FPR), a system of indirect myofascial release treatment. The component region of the body is placed into a neutral position, diminishing tissue and joint tension in all planes, and an activating force (compression or torsion) is added.

2. A technique developed by Stanley Schiowitz, DO.

fascial release treatment, See *osteopathic manipulative treatment, myofascial release.*

fascial unwinding, a manual technique involving constant feedback to the osteopathic practitioner who is passively moving a portion of the patient's body in response to the sensation of movement. Its forces are localized using the sensations of ease and bind over wider regions.

functional method, an indirect treatment approach that involves finding the dynamic balance point and one of the following: applying an indirect guiding force, holding the position or adding compression to exaggerate position and allow for spontaneous readjustment. The osteopathic practitioner guides the manipulative procedure while the dysfunctional area is being palpated in order to obtain a continuous feedback of the physiologic response to induced motion. The osteopathic practitioner guides the dysfunctional part so as to create a decreasing sense of tissue resistance (increased compliance).

Galbreath treatment, See *osteopathic manipulative treatment, mandibular drainage.*

hepatic pump, rhythmic compression applied over the liver for purposes of increasing blood flow through the liver and enhancing bile and lymphatic drainage from the liver.

high velocity/low amplitude technique (HVLA), an osteopathic technique

employing a rapid, therapeutic force of brief duration that travels a short distance within the anatomic range of motion of a joint, and that engages the restrictive barrier in one or more planes of motion to elicit release of restriction. Also known as thrust technique.

Hoover technique, 1. A form of functional method. 2. Developed by H.V. Hoover, DO. See also *osteopathic manipulative treatment, functional technique.*

indirect method (I/IND), a manipulative technique where the restrictive barrier is disengaged and the dysfunctional body part is moved away from the restrictive barrier until tissue tension is equal in one or all planes and directions.

inhibitory pressure technique, the application of steady pressure to soft tissues to reduce reflex activity and produce relaxation.

integrated neuromusculoskeletal release (INR), a treatment system in which combined procedures are designed to stretch and reflexly release patterned soft tissue and joint-related restrictions. Both direct and indirect methods are used interactively.

Jones technique, See *osteopathic manipulative treatment, counterstrain.*

ligamentous articular strain technique (LAS), 1. A manipulative technique in which the goal of treatment is to balance the tension in opposing ligaments where there is abnormal tension present. 2. A set of myofascial release techniques described by Howard Lippincott, DO, and Rebecca Lippincott, DO. 3. Title of reference work by Conrad Speece, DO, and William Thomas Crow, DO.

liver pump, See *hepatic pump.*

lymphatic pump, 1. A term used to describe the impact of intrathoracic pressure changes on lymphatic flow. This was the name originally given to the thoracic pump technique before the more extensive physiologic effects of the technique were recognized. 2. A term coined by C. Earl Miller, DO.

mandibular drainage technique, soft tissue manipulative technique using passively induced jaw motion to effect increased drainage of middle ear structures via the eustachian tube and lymphatics.

mesenteric release technique (mesenteric lift), technique in which tension is taken off the attachment of the root of the mesentery to the posterior body wall. Simultaneously, the abdominal contents are compressed to enhance venous and lymphatic drainage from the bowel.

muscle energy, a form of osteopathic manipulative diagnosis and treatment in which the patient's muscles are actively used on request, from a precisely controlled position, in a specific direction, and against a distinctly executed physician counterforce. First described in 1948 by Fred Mitchell, Sr, DO.

myofascial release (MFR), a system of diagnosis and treatment first described by Andrew Taylor Still and his early students, which engages continual palpatory feedback to achieve release of myofascial tissues.

> **direct MFR,** a myofascial tissue restrictive barrier is engaged for the myofascial tissues and the tissue is loaded with a constant force until tissue release occurs.
>
> **indirect MFR**, the dysfunctional tissues are guided along the path of least

resistance until free movement is achieved.

myofascial technique, any technique directed at the muscles and fascia. See also *osteopathic manipulative treatment, myofascial release.* See also *osteopathic manipulative treatment, soft tissue technique.*

myotension, a system of diagnosis and treatment that uses muscular contractions and relaxations under resistance of the osteopathic practitioner to relax, strengthen or stretch muscles, or mobilize joints.

Osteopathy in the Cranial Field (OCF), 1. A system of diagnosis and treatment by an osteopathic practitioner using the primary respiratory mechanism and balanced membranous tension. See also *primary respiratory mechanism.* 2. Refers to the system of diagnosis and treatment first described by William G. Sutherland, DO. 3. Title of reference work by Harold Magoun, Sr, DO.

passive method, based on techniques in which the patient refrains from voluntary muscle contraction.

pedal pump, a venous and lymphatic drainage technique applied through the lower extremities; also called the pedal fascial pump or Dalrymple treatment.

percussion vibrator technique, 1. A manipulative technique involving the specific application of mechanical vibratory force to treat somatic dysfunction. 2. An osteopathic manipulative technique developed by Robert Fulford, DO.

positional technique, a direct segmental technique in which a combination of leverage, patient ventilatory movements and a fulcrum are used to achieve mobilization of the dysfunctional segment. May be combined with springing or thrust technique.

progressive inhibition of neuromuscular structures (PINS), 1. A system of diagnosis and treatment in which the osteopathic practitioner locates two related points and sequentially applies inhibitory pressure along a series of related points. 2. Developed by Dennis Dowling, DO.

range of motion technique, active or passive movement of a body part to its physiologic or anatomic limit in any or all planes of motion.

soft tissue (ST), A system of diagnosis and treatment directed toward tissues other than skeletal or arthrodial elements.

soft tissue technique, a direct technique that usually involves lateral stretching, linear stretching, deep pressure, traction and/or separation of muscle origin and insertion while monitoring tissue response and motion changes by palpation. Also called myofascial treatment.

Spencer technique, a series of direct manipulative procedures to prevent or decrease soft tissue restrictions about the shoulder. See also *osteopathic manipulative treatment (OMT), articulatory treatment (ART).*

splenic pump technique, rhythmic compression applied over the spleen for the purpose of enhancing the patient's immune response. See also *osteopathic manipulative treatment (OMT), lymphatic pump.*

spontaneous release by positioning, See *osteopathic manipulative treatment, counterstrain.*

springing technique, a low velocity/ moderate amplitude technique where the

restrictive barrier is engaged repeatedly to produce an increased freedom of motion. See also *osteopathic manipulative treatment, articulatory treatment system.*

Still Technique, 1. Characterized as a specific, non-repetitive articulatory method that is indirect, then direct. 2. Attributed to A.T. Still. 3. A term coined by Richard Van Buskirk, DO, PhD.

Strain-Counterstrain,® 1. An osteopathic system of diagnosis and indirect treatment in which the patient's somatic dysfunction, diagnosed by (an) associated myofascial tenderpoint(s), is treated by using a passive position, resulting in spontaneous tissue release and at least 70 percent decrease in tenderness. 2. Developed by Lawrence H. Jones, DO, in 1955. See *osteopathic treatments, counterstrain.*

thoracic pump, 1. A technique that consists of intermittent compression of the thoracic cage. 2. Developed by C. Earl Miller, DO.

thrust technique (HVLA), See *osteopathic manipulative treatment, high velocity/low amplitude technique (HVLA).*

toggle technique, short lever technique using compression and shearing forces.

traction technique, a procedure of high or low amplitude in which the parts are stretched or separated along a longitudinal axis with continuous or intermittent force.

v-spread, technique using forces transmitted across the diameter of the skull to accomplish sutural gapping.

ventral techniques, See *osteopathic manipulative treatment, visceral manipulation.*

visceral manipulation (VIS), a system of diagnosis and treatment directed to the viscera to improve physiologic function. Typically, the viscera are moved toward their fascial attachments to a point of fascial balance. Also called ventral techniques.

somatic dysfunction: Impaired or altered function of related components of the somatic (body framework) system: skeletal, arthrodial and myofascial structures, and their related vascular, lymphatic, and neural elements. Somatic dysfunction is treatable using osteopathic manipulative treatment.

SUBJECT: RETAIL-BASED HEALTH CLINICS AND URGENT CARE CENTERS - SOURCE: H-301/A20

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has provided amendments to provide clarity and updates to the policy, now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be Reaffirmed as Amended.

The American Osteopathic Association (AOA) recommends that retail-based health clinics and urgent care centers adhere to the following principles and standards to guide their establishment and operation.

1. Retail-based health clinics and urgent care centers must establish arrangements by which their health care practitioners have direct access to and supervision by physicians at levels that meet or exceed respective state laws.
2. Retail-based health clinics and urgent care centers must encourage patients to establish care with a primary care physician to ensure continuity of care. If a patient's conditions or symptoms are beyond the scope of services provided by the clinic, that patient must immediately be referred to an appropriate physician or emergency facility. Also, retail-based health clinics **AND** urgent care centers should be encouraged to use electronic health records as a means of communicating information with the patient's primary physician and facilitating continuity of care.
3. Whether by electronic communication, or some other acceptable means, retail-based health clinics **AND** urgent care centers must send detailed information on services provided to the patient's primary care physician in a timely manner to ensure continuity of care.
4. The clinic must have a well-defined and limited scope of clinical services. These services must not exceed the on-site health provider's scope of practice, as determined by state law. **IF A LISCENSED PHYSICIAN IS NOT ONSITE, IT MUST BE CLEARLY POSTED.**
5. Retail-based health clinics **AND** urgent care centers must use standardized medical protocols developed from evidence-based practice guidelines for non-physician practitioners.

6. Retail-based healthcare clinics **AND** urgent care centers must comply with all applicable standards of state and federal regulations expected of physician offices.
7. Retail-based healthcare clinics and urgent care centers must not expand into programs offering patient care for the management of chronic and complex conditions.
8. Retail-based healthcare clinics located in or affiliated with a pharmacy must inform patients that any medication prescribed or recommended may be purchased at the patient's pharmacy of choice.

SUBJECT: USE OF THE TERM “PHYSICIAN” “DOCTOR” AND “PROVIDER”- SOURCE: H336-A/20

SUBMITTED BY: Council on State Health Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant now, therefore be it

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED**.**

Use of the Term “Physician” “Doctor” and “Provider”

The American Osteopathic Association (AOA) adopts as policy:

(1) that ~~AOA members~~ **OSTEOPATHIC PHYSICIANS** are encouraged to use the terms “physician” or “doctor” to describe themselves, leaving other terms such as “practitioner,” “clinician,” or “provider” to be used by non-physician clinicians or to categorize health care professionals as a whole;

(2) THAT AOA ADVOCATES FOR THE USE OF THE TERM “STUDENT PHYSICIAN” WHEN INTRODUCING OSTEOPATHIC MEDICAL STUDENTS IN CLINICAL SETTINGS, TO CLEARLY DISTINGUISH THEM FROM OTHER TYPES OF LEARNERS WITHIN THE HEALTHCARE ENVIRONMENT.

~~(2)~~ **(3) THAT AOA** supports the appropriate use of credentials and professional degrees in advertisements;

~~(3)~~ **(4) THAT AOA** supports providing a mechanism for physicians to report advertisements related to medical care that are false or deceptive;

~~(4)~~ **(5) THAT AOA** opposes non-physician clinicians’ use of the title “physician,” as well as use of the title “doctor” without specifying the type of doctorate received, because such communication is likely to confuse the public by implying that the non-physician clinician is engaged in the unlimited practice of medicine;

~~(5)~~ **(6) THAT AOA** opposes legislation that would expand the use of the term “physician” to persons other than US-trained DOs, and MDs; and

34 ~~(6)~~ **(7) THAT AOA** supports a policy that physicians and non-physician clinicians
35 should identify themselves to their patients using their degree in both a verbal
36 introduction as well as by other identification clearly visible during patient
37 encounters.

SUBJECT: SUPPORT FOR **OSTEOPATHIC MANIPULATIVE TREATMENT (**OMT**)** PRIVILEGES – SOURCE: H349-A/19

SUBMITTED BY: Bureau of Osteopathic Education / AOA Board of Trustees

REFERRED TO: Committee on Professional Affairs

WHEREAS, the Bureau of Osteopathic Education (BOE) submitted H335 A/24 Support for OMT Privileges (Source H349 A/19) to the 2024 House of Delegates and recommended that it be reaffirmed as amended; and

WHEREAS, the 2024 House of Delegates referred this policy back to BOE to include guidelines for credentialing if appropriate; and

WHEREAS, the BOE and President Hubka's CME Workgroup has reviewed the policy and sample credentialing guidelines; and

WHEREAS, the BOE has had significant discussions regarding this resolution at its November 2023, January 2024, April 2024, June 2024, September 2024, January 2025, and March 2025 meetings. The revisions to the policy are based on the 2015 credentialing document from the Department of the Navy Bureau of Medicine and Surgery; and

WHEREAS, consensus within the BOE could not be reached on the creation of separate guidelines "that standardize credentialing and privileging processes, including proctoring and approval of privileges to practice OMT." There was significant concern that the development of credentialing guidelines would have unintended consequences and create a mechanism for non-DOs to regulate OMT practice within medical systems and hospitals; and

WHEREAS, the BOE believes that their revisions to the policy provides guidance for **THE AMERICAN OSTEOPATHIC ASSOCIATION (**AOA**)** to advocate for all osteopathic physicians who desire to practice OMT within medical systems and hospitals. This is also consistent with current AOA **Osteopathic Manipulative Treatment (OMT) Coverage Determination Guidance** Source: H635 - A/20 "To perform OMT a qualified Doctor of Osteopathic Medicine must have graduated from an accredited school of osteopathic medicine or a medical doctor must have completed a board-approved postgraduate osteopathic training program that encompasses osteopathic principles and practices, including hands-on demonstration and competency testing in OMT"; and

WHEREAS, THE DEFINITION OF ~~OSTEOPATHIC MANIPULATIVE TREATMENT IS: OSTEOPATHIC MANIPULATIVE TREATMENT (~~OMT~~)~~ IS THE THERAPEUTIC APPLICATION OF MANUALLY GUIDED FORCES BY APPROPRIATELY TRAINED, FULLY LICENSED PHYSICIANS TO

IMPROVE PHYSIOLOGIC FUNCTION AND/OR SUPPORT HOMEOSTASIS THAT HAS BEEN ALTERED BY SOMATIC DYSFUNCTION.(1) SOMATIC DYSFUNCTION IS DEFINED AS "IMPAIRED OR ALTERED FUNCTION OF RELATED COMPONENTS OF THE BODY FRAMEWORK SYSTEM: SKELETAL, ARTHRODIAL AND MYOFASCIAL STRUCTURES, AND THEIR RELATED VASCULAR, LYMPHATIC AND NEURAL ELEMENTS." (1) OMT IS CONSIDERED SAFE WITH LOW RATES OF ADVERSE EVENTS (2); AND

WHEREAS, Osteopathic Manipulative Treatment is required curriculum for all Colleges of Osteopathic Medicine and assessed by the Comprehensive Osteopathic Medical Licensing Examination of the United States, ~~and~~ **NOW THEREFORE BE IT**;

~~WHEREAS, this guidance only refers to osteopathic physicians; a separate resolution should be developed if there is a desire to have policy for allopathic physicians; now, therefore be it~~

RESOLVED, that the BOE recommends that the following policy be REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA) **WILL** support and advocate for all **OSTEOPATHIC** physicians who desire to practice osteopathic manipulative treatment (OMT) within medical systems and hospitals; ~~and, that The AOA create guidelines, that can be distributed upon request to hospitals, medical systems, and other interested entities, that standardize credentialing and privileging processes, including proctoring and approval of privileges to practice OMT~~.

DELINEATION OF CLINICAL PRIVILEGES

THE AOA HOLDS THAT GRADUATION FROM A COCA-ACCREDITED OSTEOPATHIC MEDICAL SCHOOL OR AN OSTEOPATHICALLY RECOGNIZED RESIDENCY PROGRAM PROVIDES SUFFICIENT FOUNDATIONAL COMPETENCY IN OMT. NEVERTHELESS, IT RECOGNIZES THAT CERTAIN HOSPITAL MEDICAL STAFF COMMITTEES OR PRIVILEGING BODIES MAY REQUIRE FURTHER EVIDENCE OR DOCUMENTATION TO DEMONSTRATE ONGOING COMPETENCY IN OMT, PARTICULARLY IN DIVERSE CLINICAL CONTEXTS.

THESE GUIDELINES, THEREFORE, SERVE AS AN ADVISORY RESOURCE, ASSISTING PRIVILEGING BODIES IN VERIFYING AND VALIDATING OMT PRIVILEGES WHILE RESPECTING THE UNIQUE AUTHORITY AND EXPERTISE OF OSTEOPATHIC PHYSICIANS TO GUIDE AND OVERSEE OMT CREDENTIALING.

THIS DOCUMENT SERVES TO PROVIDE EXAMPLE GUIDELINES AND IS NOT INTENDED TO SET A STANDARD FOR ANY INSTITUTION OR TO BE ALL-INCLUSIVE. IT REFLECTS THE AMERICAN OSTEOPATHIC ASSOCIATION

(AOA) POLICY AND EMPHASIZES THE EXCLUSIVE AUTHORITY OF OSTEOPATHIC PHYSICIANS IN GUIDING PRIVILEGING FOR OMT.

TRAINING OR EXPERIENCE CRITERIA FOR OMT PRIVILEGES:

1. **GRADUATED FROM OSTEOPATHICALLY RECOGNIZED ACGME RESIDENCY PROGRAM, OR GRADUATED FROM AN AOA OR ACGME RESIDENCY PROGRAM AND PERFORMED OMT DURING RESIDENCY, AND**
2. **PARTICIPATES IN AOA-ACCREDITED, OMT-SPECIFIC CONTINUING MEDICAL EDUCATION COURSES, OR**
3. **DEMONSTRATES CONSISTENT AND ACTIVE PRACTICE OF OMT (DOCUMENTED OR ATTESTED TO)**

SUBJECT: END-OF-LIFE CARE – USE OF PLACEBOS IN – SOURCE: H322-A/19

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) submitted H310-A/2024 SR END-OF-LIFE CARE – USE OF PLACEBOS IN-H322-A/19 to the 2024 House of Delegates and recommended that it be reaffirmed; and

WHEREAS, the 2024 House of Delegates referred this policy back to BORPH and requested that BORPH update the language to use current terminology for substance use disorders; and

WHEREAS, the policy was sent to the American Osteopathic Academy on Addiction Medicine to review and update the language, now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

Use of Placebos in End-of-Life Care

Position Paper

The AOA approves the attached position paper on Use of Placebos for Pain Management in End-of-Life Care and will be updated according to the current literature.

USE OF PLACEBOS FOR PAIN MANAGEMENT IN END-OF-LIFE CARE

The placebo effect of medication can be a significant resultant action of any prescription. However, the substitution of a placebo in place of effective pain medication has been widely recognized as unethical, ineffective and potentially harmful. ([1-9]) A number of organizations have advised against the use of placebo substitution, including the American Pain Society, Agency for Healthcare Policy and Research, World Health Organization, the Healthcare Facilities Accreditation Program, Joint Commission on Accreditation of Healthcare Organizations, Education on End-of-Life Care Project (co-sponsored by the American Medical Association), American Nursing Association, and the American Society of Pain Management Nurses.

This white paper describes the literature and rationale in support of the AOA's position on the controversial subject of the use of placebos for pain management in terminally ill patients.

I. Definition of Terms

A. Placebo, placebo substitution, placebo effect and nocebo response

A placebo is a substance presumed to be pharmacokinetically inert. Placebo substitution means the substitution of a physiologically inactive substance for a comparison with the physiologically active substance. Placebo effect is the positive psychosomatic response of an individual to a treatment; in contrast, the nocebo response is a negative psychosomatic response to a treatment. ([10]) The placebo effect is an important adjunct in the treatment of symptoms. The alleviation of symptoms has an inherent positive psychological component; patients who perceive their symptoms to be relieved by the treatment and trust in their treating physician's treatment plan and/or prescription for the symptom relief are more likely to obtain relief. ([4] [2])

Placebo responses are necessary for controlled clinical trials in which the patient is informed that a placebo may indeed be utilized. Physiologic responses to placebo can be pleasant or unpleasant to the patient. An unpleasant effect attributable to administration of a placebo is called a "nocebo response". A pleasant effect is called a "positive placebo response". It has been noted that, "a positive placebo response simply speaks to the strength of an individual's central control processes (i.e., mind) to recruit their descending inhibitory system to block pain. The trained osteopathic physician knows that pain relief occurs both in the mind and in the body." ([4]) The basis of the placebo effect in a therapeutic physician-patient relationship also involves good communication skills as well as listening to the patient. ([4, 11, 12])

To summarize, a placebo is a type of treatment, necessarily used in controlled clinical trials, that has no inherent physiological action yet is designed to mimic a therapy with a known active physiologic effect. Positive changes resulting from placebo administration would be due to expectations of success by the patient. Thus, the use of placebo effect is based on the patient's perception of the role of the placebo agent with symptom relief. The placebo response may be enhanced with a positive patient-physician relationship.

B. Addiction, substance **USE DISORDER**, ~~abuse and dependence,~~ tolerance, withdrawal, and pseudo-addiction.

Some physicians inappropriately justify using **A** placebo in pain management to avoid **GENERATING A SUBSTANCE USE DISORDER** ~~"addicting" the patient~~. Addiction, as defined by the American Academy of Pain Medicine,([13]) "is a primary, chronic, neurobiologic disease, with genetic, psychosocial, and environmental factors influencing its development and manifestations. It is characterized by behaviors that include one or more of the following: impaired control over drug use, compulsive use, continued use despite harm, and craving."

Substance **USE DISORDER** ~~abuse~~ is defined as **THE HARMFUL USE OF SUBSTANCES DESPITE NEGATIVE CONSEQUENCES**. ~~psychological and physical dependence on substances.~~ Some physicians are concerned that prescribing narcotics may lead to substance **USE DISORDER** ~~abuse~~ and therefore may attempt to use a placebo to assess whether the patient truly requires narcotics for pain relief. However, there is no scientific basis for using placebo in the assessment of the patient in pain who has or may have the potential for a substance **USE DISORDER** ~~abuse~~. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-V) ([14]), lists definitive criteria for diagnosis of psychological and physical dependence on substances. This text categorizes "Substance-Related Disorders" but does not utilize the term addiction; further, nowhere in the DSM-V is placebo administration utilized with criteria for diagnosing various forms of substance **USE DISORDERS.** ~~abuse.~~ Substance **USE DISORDER** ~~dependence~~ **ENCOMPASSES** ~~is defined as~~ a cluster of cognitive, behavioral, and physiological symptoms. The essential feature of a substance **USE DISORDER** ~~dependent individual~~ is continuous use of the substance despite significant substance-related problems, such as deleterious effects on occupation, relationships, health, and others.

Physicians may become uncomfortable with requests for increased dosages of pain medications, fearing that a patient is manifesting a substance-related disorder. A better understanding of the concepts of tolerance, physical dependence, physiological dependence withdrawal symptoms and pseudo-addiction, may help physicians understand and more effectively treat these patients.

Tolerance represents a markedly diminished effect that can occur with continued use of most medications; the degree depends upon the daily dose and length of use. The need for medication titration, either due to development of tolerance or to incomplete responsiveness, is a part of routine medical care. Tolerance occurs due to compensatory changes in receptors and/or increased clearance resulting from induction of various metabolic pathways. The problem of tolerance should therefore be anticipated as a possible outcome in prescription pain medications.

Withdrawal is defined by the DSM-V ([14]) as a maladaptive behavioral change having physiological and cognitive concomitants, which occurs when blood or tissue concentrations of a substance decline in an individual who had maintained prolonged use of the substance, frequently inappropriately. Examples of withdrawal include the onset of seizures or delirium tremens in a newly abstinent alcohol chemically dependent individual.

Pseudo-addiction is the term used to describe the behavior of a patient in pain who is receiving an insufficient amount and/or an inappropriate dosing frequency of administration of the prescribed pain medication. In an effort to obtain relief, the patient in pain would request more frequent and/or increased medication. Such "drug seeking behavior" has been deemed as "proof" of "addiction." The reason for such requests is frequently that the patient is under-dosed, receiving too little of the medication and/or too long a delay between doses of the pain medication. In such instances, the patient receives inappropriate pain relief, which is not an appropriate criterion of a **SUBSTANCE USE DISORDER** ~~substance-abusing patient~~ according to the DSM-V. ([14])

126 II. Legal Considerations in the Use of Placebos in Pain Management
127 While there are no specific laws governing the use of placebos in any circumstance, there
128 is a considerable amount of legislation regarding a patient's right to pain management.
129 There are several state statutes that address this issue, some of which are based on the
130 Federation of State Medical Boards' Model Guidelines for the Use of Controlled
131 Substances for the Treatment of Pain.([15]) This document clarifies that legislative statutes
132 accepting these guidelines understand the ongoing increased scientific knowledge of pain
133 management, and thus have no need to modify legislation as the science of pain
134 management changes. This document does not mention placebo usage.
135
136 The American Bar Association (ABA) ([16]) adopted a resolution concerning the promotion of
137 pain management in all patients with chronic pain. This resolution states, "…that the
138 American Bar Association urges federal, state, and territorial governments to support fully
139 the rights of individuals suffering from pain to be informed of, choose, and receive effective
140 pain and symptom evaluation, management and ongoing monitoring as part of basic
141 medical care, even if such pain and symptom management may result in analgesic
142 tolerance, physical dependence or as an unintended consequence shorten the individual's
143 life." Placebo substitution for active pain medicine without informed consent on the part of
144 the patients clearly violates the nature and substance of the ABA's position. Additionally, in
145 two Supreme Court decisions regarding the right to assisted suicide, the court promoted
146 the right of individuals to appropriate palliative care and pain management. ([17, 18])
147
148 While there is little case law concerning tort or administrative findings against physicians
149 for inadequate pain management, this is likely to change in the near future. The main
150 barrier to malpractice claims for inadequate pain management is use of the customary
151 local standard to determine what constitutes ordinary care. The courts are steadily moving
152 away from this standard to a national standard which uses clinical guidelines as the
153 determinant of ordinary care. This is seen in the decision in the case of Nowatske v.
154 Oserloh, where the court stated, "should customary medical practice fail to keep pace with
155 development and advances in medical science, adherence to custom might constitute a
156 failure to exercise ordinary care…" ([19])
157
158 Guidelines developed by the Agency for Healthcare Policy and Research, now the Agency
159 for Healthcare Research and Quality ([1]), the American Pain Society, ([7]) the Healthcare
160 Facilities Accreditation Program ([20]) as well as the Joint Commission on Accreditation of
161 Healthcare Organizations ([21]) are good examples of sources the courts are using to
162 determine ordinary practice. These guidelines do not support the use of placebo in any
163 fashion except in approved research studies when the appropriate patient informed
164 consent has been obtained. Therefore, the physician thus cannot justify the use of placebo
165 for pain management by attempting to diagnose "addiction" or with support from any of the
166 above regulatory agencies. ([5])
167 Furthermore, under California's elder abuse statute, ([22]) a physician was successfully sued
168 by the deceased's family for inadequate pain management at the end of life. ([23])
169
170 III. Adverse Effects of Placebo Use
171

Pain is a universal experience and is subjective by nature. Despite the common colloquialism, “I feel your pain,” no individual can truly experience another’s pain. There are no laboratory tests or consistently reliable physical findings for assessment of pain. Patient self-report remains the gold standard for pain assessment. ([24]) Use of a placebo in place of an effective pain medication for attempting to determine whether the patient at end-of life is really in pain is under no circumstances appropriate.

There is a concern if a physician deceives the patient and substitutes a placebo treatment in the place of a known effective treatment without informing the patient. Deception has no place within the therapeutic relationship and is counter-productive. A physician may counsel a patient that “this treatment may be effective in treating your condition,” but evidence-based medicine cannot guarantee a treatment outcome.

In this era of informed consent, deception of the patient poses many problems, including erosion of the trust individuals and society as a whole have for physicians. There are methods of using placebos and the placebo effect that do not involve deceit, e.g., clinical trials or the use of placebo as one of the trial agents for neurolytic block. This one narrow exception uses the placebo trial as part of the treatment selection for neurolytic blockade, a highly specialized procedure performed by a few skilled pain management physicians with appropriate informed consent.

Substituting placebo for accepted forms of pain treatment is under-treatment of the condition. Under-treatment of pain, as detailed in the American Bar Association’s 2000 report, is an ongoing problem. ([25]) While there have been reports of placebo efficacy in pain management, placebo control of pain occurs in fewer patients and for shorter duration than active pain treatments. ([7, 26]) It has also been argued that the prescription of an ineffective placebo in place of effective pain medication can act as a “suicidogen,” whereby an individual in pain who is given inadequate medication for relief may be prompted to hasten his/her death. ([6]) In the clinical setting, substitution of a placebo for an active pain medication, even with the consent of the patient, is clinically suspect because better treatment alternatives exist and there are risks associated with the use of placebos. It is therefore inappropriate to substitute a placebo for a medication known to be effective in the treatment of a patient with the verified pain of a terminal illness.

Additionally, placebos are associated with side effects ([3]) and potentially precipitate hyperalgesia ([27]) or withdrawal in patients previously treated with pain medications.

IV. Summary

Exquisite management of end-of-life pain is a medical imperative. Use of a placebo in place of known effective pain medication for determining whether the patient is really in pain is under no circumstances appropriate. Use of placebos does not meet the accepted criteria to diagnose substance **USE DISORDER** ~~abuse,~~ commonly referred to by some physicians as “addiction.” There is no medical justification for the use of placebos to assess or treat pain at end of life.

The only appropriate use of a placebo is in approved clinical research with informed consent.

SUBJECT: SUPPORT FOR METHODS TO INCREASE THE COMPENSATION FOR PEDIATRICIANS TO ADDRESS FUTURE WORKFORCE CHALLENGES

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, pediatrics is a critical specialty in the American Healthcare system, providing essential care to infants, children, and adolescents and contributing to the long-term health of the population [1]; and

WHEREAS, the number of graduating medical students matching into pediatric residency programs has declined in recent years, leading to concerns about the adequacy of the future pediatric workforce [2]; and

WHEREAS, pediatricians face unique financial challenges, including lower average compensation compared to many other medical specialties, despite the high demands of their work and the complex care required by pediatric patients [2,3]; and

WHEREAS, pediatricians often care for a disproportionately high percentage of Medicaid populations, which are subject to lower reimbursement rates and increased administrative burdens, further impacting their financial viability [2,3]; and

WHEREAS, addressing the compensation disparities faced by pediatricians is necessary to increase the attractiveness of the specialty to graduating medical students who face a heavy medical school debt load, to ensure adequate access to pediatric care nationwide [4]; and, now therefore be it:

RESOLVED, that the American Osteopathic Association (AOA) advocate for the exploration and implementation of creative methods to increase the compensation of pediatricians, including but not limited to:

- ~~Advocacy for increased Medicaid and Medicare reimbursement rates for pediatric services~~
- ~~Development of loan repayment programs, scholarships, or financial incentives targeted specifically at medical students and residents pursuing primary care pediatrics~~
- ~~Establishing public and private grants or subsidies to support pediatric practices in underserved or high-need areas~~
- ~~Promoting value-based care models that reward pediatricians for improving health outcomes in vulnerable populations, and be it further~~

35 RESOLVED, that the AOA ~~advocate for~~ **SUPPORT** collaboration with federal and state
36 policymakers, healthcare organizations, and medical education stakeholders to
37 advocate for policy reforms that address financial barriers to entering the pediatric
38 specialty; and be it further
39
40 RESOLVED**,** that the AOA ~~advocate for~~ **SUPPORT** research into innovative payment
41 models and compensation structures for pediatricians to ensure long-term sustainability
42 of the pediatric workforce for the future~~., and be it further~~
43
44 ~~RESOLVED, that a copy of this resolution be submitted to the AOA for consideration at the~~
45 ~~2025 AOA House of Delegates~~.

SUBJECT: DEFINITION OF OSTEOPATHIC PHYSICIAN

SUBMITTED BY: Osteopathic Physicians and Surgeons of California

REFERRED TO: Committee on Professional Affairs

WHEREAS, osteopathic medicine has struggled to define itself in a way that represents all U.S. trained osteopathic physicians, regardless of specialty or use of Osteopathic Manipulative Treatment (OMT); and

WHEREAS, American Osteopathic Association (AOA) policy H317/A23 defines osteopathic medicine as follows:

The American Osteopathic Association (AOA) defines osteopathic medicine as a complete system of medical care with a philosophy that combines the needs of the patient with the current practice of medicine, surgery and obstetrics; that emphasizes the concept of body unity, the interrelationship between structure and function; and that has an appreciation of the body's ability to heal itself; and

WHEREAS, there is a need for the profession to align around a common, contemporary definition that enables research, grant funding, physician reimbursement, and public education and marketing; and

WHEREAS, adoption of a unified, modern definition of a U.S. trained osteopathic physician will strengthen internal cohesion and promote clearer external understanding and communication of the role and philosophy of the osteopathic physician; and

WHEREAS, the upcoming *Educational Council on Osteopathic Principles (ECOP) Glossary of Osteopathic Terminology* includes the following definition:

Doctor of Osteopathic Medicine (DO), United States: an osteopathic physician who has graduated from a COCA-accredited institution and is a fully qualified physician, educated within the context of a distinct patient-centered, health-oriented philosophy, trained to combine specialized diagnostic and therapeutic hands-on skills (Osteopathic Manipulative Treatment) with the latest advances in the science and practice of medicine to offer comprehensive healthcare to patients; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) adopt the Educational Council on Osteopathic Principles (ECOP) definition of "Doctor of Osteopathic Medicine, United States" for profession-wide use; and be it further

32 RESOLVED, that the AOA encourage all affiliated entities to utilize this definition in
33 all activities involving the definition and representation of a U.S. trained
34 osteopathic physician.

SUBJECT: AOA PROGRAM PARTICIPANTS AND AWARDS CRITERIA POLICY

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Professional Affairs

WHEREAS, in 2024 the AOA President constructed an AOA Program and Award Recipients Workgroup; and

WHEREAS, the charge of the workgroup was to confirm guidelines for participants and recipients for the following AOA programs: AOA Awards Recipients; AOA Program Participants (i.e., Leadership Academy, TIPS Program); BEL Scholarship Recipients; Bureaus, Committees, and Councils Appointments; Task Force and Liaison Appointments; Research Grant Recipients; A.T. Still Lecturers; Presidential Citation Recipients; Speakers and Presenters During AOA Events; and Media Recognition Outlets (i.e., The DO, DOs to Know); and

WHEREAS, the workgroup also was charged to determine if recipients and participants who are eligible for AOA membership be required to maintain current AOA membership and if recipients and participants who are DOs eligible for board certification maintain current AOA board certification status for each of the programs; and

WHEREAS, the AOA's Constitution and Bylaws contain requirements for AOA membership but there are no requirements for AOA board certification; and

WHEREAS, the workgroup completed a report that was reviewed and approved by the AOA Board of Trustees in July 2024; and now, therefore be it

RESOLVED, that the AOA House of Delegates accept the AOA Program Participants and Awards Criteria Policy provided with this resolution~~; and be it further~~

~~RESOLVED, that the AOA Board of Trustees will establish a task force that will further study AOA board certification as a requirement for specific AOA positions~~.

Background Information: Provided by AOA Staff

Current AOA Policy: Approved by the AOA Board of Trustees July 2024.

AOA Program Participants and Awards Criteria Policy

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
Bureaus, Committees, and Council	** Except where positions are designated for public members (i.e., non-physicians serving on a bureau or committee who are intended to represent and speak for the interests of the public and consumers of osteopathic medical services), membership in both the AOA and a divisional society shall be a requisite for qualification for service on a bureau, council, or committee of the Association. (AOA Bylaws, Article IX) – AOA board certification is preferred.	Required (with exceptions)	Preferred (with exceptions)
BEL DO Day Scholarship Program	Scholarships to attend DO Day are awarded to osteopathic physicians in training and new physicians in practice who want to become more involved in medical advocacy. AOA membership is a requirement to receive this scholarship. AOA board certification is preferred.	Required	Preferred
BEL OMED Scholarship Program	Osteopathic residents, fellows, and new physicians in practice who are enrolled in an ACGME-accredited postdoctoral training program (if you are a resident/fellow) within five years of completing postdoctoral training (if you are a new physician in practice), and a first-time OMED attendee. AOA membership is a requirement to receive this scholarship. AOA board certification is preferred.	Required	Preferred (with exceptions) Exceptions will include postdoctoral trainees
Leadership Academy Program	This academy is designed for osteopathic medical students, residents, fellows, and new physicians in practice who want to enhance their leadership skills. Candidates preferably have some leadership experience within the profession prior to participating in the program. AOA membership is a requirement to receive this scholarship. AOA board certification is preferred.	Required	Preferred (with exceptions) Exceptions will include postdoctoral trainees and osteopathic medical students

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
Liaison Appointments	Recommendations for appointments are submitted to the President, President-Elect, and CEO for review and approval. The Board of Trustees will approve all appointments. AOA membership is required. AOA board certification is preferred. Exceptions will be made for those who represent other fields of public service.	Required (with exceptions)	Preferred (with exceptions)
Task Force Appointments	Recommendations for appointments are submitted to the President, President-Elect, and CEO for review and approval. The Board of Trustees will approve all appointments. AOA membership is required. AOA board certification is preferred. Exceptions will be made for those who represent other fields of public service.	Required (with exceptions)	Preferred (with exceptions)
Training In Public Studies (TIPS) Program	The TIPS program is open to all osteopathic physicians who are in an active AOA- or ACGME-accredited residency or fellowship training program to apply. In addition, our letter of acceptance to the program requires fellows to become members of the AOA at the resident physicians and fellows level, at minimum. AOA board certification is not required.	Required	Not Required

Awards and Recognition

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
Awards: Advocacy Awards	AOA advocacy awards are intended to recognize excellence in public policy advocacy and support for the osteopathic profession through various media/communication platforms. Award categories will include individual AOA members (including students and residents), osteopathic affiliates, media advocates, and members of Congress. Except for categories recognizing public service individuals, recipients are required to be AOA members. AOA board certification is not required. *The Bureau on Federal Health Programs recommends final recipients to the BOT.*	Required (with exceptions)	Not Required

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
Awards: Bob E. Jones CAE Award	The Bob E. Jones, CAE Award recognizes outstanding executive directors/CEOs who continually contribute to the AOA and the osteopathic profession. All executive directors/CEOs from state affiliates, specialty affiliates, and osteopathic stakeholder organizations are eligible for nomination for the award. Nominations may be self-nominated, peer-nominated from other AOA affiliate EDs/CEOs, or from national AOA or affiliate volunteer leadership. Recipient(s) will be encouraged to become AOA Associate members. AOA board certification is not required. *The Bureau of Affiliate Relations recommends final recipients to the BOT.*	Preferred	Not Required
Awards: Distinguished Service Award	The Distinguished Service Award is the American Osteopathic Association's (AOA) highest honor. It is awarded annually to deserving physicians or lay individuals for outstanding accomplishments in advancing the science and art of osteopathic medicine, education, philanthropy, or other fields of public service. Preferential consideration will be given to those individuals whose service has been to or through the osteopathic medical profession. AOA board certification is not required. This award recognizes contributions to the overall profession rather than regional or local efforts. *The Committee on Awards recommends final recipients to the BOT.*	Preferred (with exceptions)	Not Required
Awards: DEI Award	The DEI Award will be presented to one individual and one organization that has proven exemplary leadership and commitment to promoting and advancing DEI initiatives in the osteopathic community. AOA membership is preferred with exception. AOA board certification is preferred. *The Committee on Awards recommends final recipients to the BOT.*	Preferred (with exceptions)	Preferred
Awards: *Journal of Osteopathic Medicine (JOM)* Awards	Each year, the *Journal of Osteopathic Medicine* will recognize an article with significant contributions to Social Determinants of Health Research, Innovations Research, Health Policy Research, Quality Improvement in Education Research, Junior Faculty / Young Investigators Research, and Clinical Research. AOA board certification is preferred. *The JOM Editorial Board recommends final recipients to the BOT.*	Preferred	Preferred

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
Awards: Mentor of the Year	The AOA Mentor of the Year Award was developed to honor DOs who help shape the future of the osteopathic profession through their involvement with osteopathic medical students and new physicians in practice. Students, DOs, AOA affiliates, or any other member of the osteopathic professional family are welcome to submit nominations. The nominee must be a member, in good standing, of the AOA. AOA board certification is preferred with exception. *The Bureau of Emerging Leaders recommends final recipients to the BOT.*	Required	Preferred (with exceptions)
Awards: Outstanding Affiliate Awards	This award recognizes the tremendous contributions that affiliates make to the success of the osteopathic profession. All state and specialty college affiliates are eligible for nomination for the Outstanding Affiliate Awards. Affiliates can self-nominate or be nominated by others for this award. Previous award recipients are ineligible for Outstanding Affiliate Award nomination until three years have elapsed. *The Bureau of Affiliate Relations recommends final recipients to the BOT.*	Not Required	Not Required
Awards: Media Recognition Outlets	Osteopathic physicians recognized in this arena are encouraged to become AOA members. AOA board certification is preferred if the individual is eligible for board certification and if AOA board certification is available. Exceptions will be made for those who represent other fields of public service.	Preferred (with exceptions)	Preferred (with exceptions)
Awards: Presidential Citations	Recipients are osteopathic medical profession leaders or groups who are honored by the current AOA President for their accomplishments and contributions to the osteopathic profession. The president is given full latitude on who will receive this award.	Not Required	Not Required

Additional Opportunities

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
A.T. Still Memorial Lecturer	An individual is selected and formally invited to deliver the Andrew Taylor Still Memorial address during the House of Delegates meeting annually. AOA membership is preferred. AOA board certification is preferred,	Preferred	Preferred (with exceptions)
Journal of Osteopathic Medicine (JOM) Editorial Board	AOA membership is required with exceptions. AOA board certification is preferred. This process is currently under review. The final criteria will be updated upon approval from the AOA Board of Trustees.	Required (with exceptions)	Preferred (with exceptions)

Program	Program Description / Criteria	AOA Membership	AOA Board Cert
Research Grant Recipients	**Physicians and PhD Researchers**: Osteopathic Physician (DO); or MD, PhD, or other individuals holding an equivalent doctoral degree (applicants not affiliated with an osteopathic institution or osteopathic recognized programs must have a DO as key personnel on the Research Team). **New Investigators**: Osteopathic Physician (DO); or MD, PhD or other individuals holding an equivalent doctoral degree (applicants not affiliated with an osteopathic institution or osteopathic recognized programs must have a DO as key personnel on the Research Team). Must have completed their terminal research degree (e.g., PhD or equivalent doctoral degree) or post-graduate clinical training (e.g., residency, fellowship), whichever date is later, within the past 10 years of the date of the expected award. **Osteopathic Medical Students**: Applicants must be an osteopathic medical student fulfilling his/her coursework requirements at an AOA accredited College of Osteopathic Medicine at the time of the award. Must have a Preceptor/Mentor with qualifying criteria. Grant recipients are encouraged to become AOA members. AOA board certification is preferred.	Preferred	Preferred (with exceptions)
Speakers and Presenters During AOA Events (Non-CME Events)	Osteopathic physicians speaking and presenting at AOA events are encouraged to become members. An exception is made for professional speakers who speak for the interests of the public. AOA board certification is preferred.	Preferred	Preferred (with exceptions)
"The DO" Editorial Board	Interested parties submit information through the communication and marketing application process. All editorial advisory board members are to be members of the AOA. *The DO* Editor and communications staff review the applications and provide recommendations to the CEO and President. The CEO and President review and approve the recommendations to be provided to the Board. AOA board certification is preferred.	Required	Preferred (with exceptions)

SUBJECT: FIREARM VIOLENCE - SOURCE: H442-A/20

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and

WHEREAS, the Bureau on Federal Health Programs believes that the policy remains relevant now, therefore be it

RESOLVED, that the Bureau on Federal Health Programs recommends the following policy be REAFFIRMED.

Policy Statement

~~The American Osteopathic Association (AOA):~~

~~(1) Supports the federal government's January 2013 clarification, "that no federal law in any way prohibits doctors or other health care providers from reporting their patients' threats of violence to the authorities, and issuing guidance making clear that the Affordable Care Act does not prevent doctors from talking to patients about gun safety;"~~

~~(2) Supports funding for the Centers for Disease Control and Prevention (CDC), the National Institutes of Health (NIH) and other research entities to conduct research on firearm violence and to provide recommendations on reducing firearm violence;~~

~~(3) Supports promotion of policies that will increase access to mental health services and for the appropriate coverage of mental health services by public and private health care programs; and~~

~~(4) Encourages enhanced education of gun safety and safe handling of firearms; and~~

~~(5) Approves the attached Policy Statement on Firearm Violence.~~

The American Osteopathic Association (AOA) is dedicated to preventing violence in our communities, especially the increased prevalence of firearm violence. As physicians, we see first-hand the devastating consequences of violence to victims and their families. The AOA recognizes that laws, regulations, and policies have

the potential to decrease the occurrence of violence, especially firearm violence, in our communities. The AOA supports:

Preserving the Ability of Physicians to Educate and Counsel their Patients on Firearm Violence

Preserving the rights of physicians and other health care professionals to counsel patients on prevention, including the prevention of injury or death as a result of firearms**,** is critical. Physicians play an important role in preventing firearm injuries through health screenings, patient counseling, and referral to mental health services. ~~The AOA supports the Administration's January 2013 clarification, "that no federal law in any way prohibits doctors or other health care providers from reporting their patients' threats of violence to the authorities, and issuing guidance making clear that the Affordable Care Act does not prevent doctors from talking to patients about gun safety."~~ We must ensure that no federal or state law hinders, restricts, or criminalizes the patient-physician relationship.

Advancing Research to Reduce Firearm Violence

Advancing research to reduce firearm violence is a public health issue that deserves the allocation of appropriate resources. The AOA supports funding for the Centers for Disease Control (CDC) and Prevention, the National Institutes of Health (NIH), and other research entities to conduct research on firearm violence and to provide recommendations on reducing firearm violence.

Improving Access to Mental Health Services and Resources

Improving access to mental health services and resources is essential to reducing firearm violence. The AOA supports promotion of policies that will increase access to mental health services and for the appropriate coverage of mental health services by public and private health care programs. Access to mental health services and resources for young adults should be a priority. The early identification of diagnosable mental health issues and subsequent treatment is vital to reducing firearm violence.

3 WHEREAS, the Bureau on Federal Health Programs believes that the policy
4 remains relevant now, therefore be it

5 RESOLVED, that the Bureau on Federal Health Programs recommends the
6 following policy be REAFFIRMED.

7 The American Osteopathic Association (AOA) recognizes public health data
8 demonstrating the impact of firearms on mortality and wellness in the United States
9 and will support federal legislation requiring comprehensive background checks for
10 all firearm purchases, including sales by gun dealers, sales at gun shows, and
11 online sales for purchase, which does not extend to firearms transfers between
12 family members or firearms attained through inheritance. The AOA will support
13 efforts to require firearms safety training, including military or law enforcement
14 training, as a condition to purchase any class of firearms.

SUBJECT: MINORITY HEALTH DISPARITIES - SOURCE: H428-A2020

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has provided amendments to provide clarity and updates to the policy, now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA) adopts the following Position Statement on Minority Health Disparities.

MINORITY HEALTH DISPARITIES

The minority healthcare crisis in America stems from a multitude of factors. In particular, healthcare disparities most greatly affect underrepresented minorities, which include African-Americans, Hispanic-Americans, Asian-Americans, Native Americans and Pacific Islanders. In order to effectively create positive change, certain questions must be addressed. These include, but are not limited to**:** Which minorities are most affected by disease-specific illness? Why do these disparities exist? What can be done to eliminate them? Will a concerted effort to increase awareness and education about health-care disparities result in improved delivery of quality healthcare?

There is a need for the osteopathic profession and all of organized medicine to develop strategies which address health care disparities among minorities and prepare culturally competent physicians. Guidance should be offered to educate practicing physicians and trainees to better resolve known disparities and serve diverse populations. Efforts must be made to assure cultural competency and to identify and overcome language and other barriers to delivering health care to minorities.

Healthcare disparities include differences in health coverage, health access and quality of care. Health disparities result in morbidity and mortality experienced by one population group in relation to another.

Cultural competency is a set of academic and personal skills that allow one to understand and appreciate cultural differences among groups. The better a

healthcare professional understands a patient's behavior, values and other personal factors, the more likely that patient will receive effective, high-quality care.

Racial and ethnic healthcare disparities caused by problems with access to, and utilization of, quality care may be alleviated through improvements in the cultural competency skills of physicians. Healthcare disparities may also be alleviated through effective recruitment of underrepresented minorities into health professions schools.

The Centers for Disease Control, in conjunction with the U.S. Department of Health and Human Services, created an Office of Minority Health in 1985. Through this collaboration, the Racial and Ethnic Approaches to Community Health Act (REACH) was designed to identify and eliminate disparities in a number of major areas. Disparities in access to care as well as quality of care in these areas result in poorer outcomes for racial and ethnic minorities. **REACH GRANTS HAVE BEEN FUNDED THROUGH 2028.**

~~The identified~~ **A**reas of disparity include: 1) infant mortality; 2) breast and cervical cancer screening and malignancy; 3) cardiovascular and cerebrovascular disease; 4) diabetes; 5) infectious diseases (i.e., Covid-19, influenza, HIV/Aids); ~~and~~ 6) child and adult immunizations; **AND 7).** ~~In addition, serious disparities exist in the~~ provision of care for mental health problems, substance abuse and suicide prevention.

The American Osteopathic Association ~~calls for~~ **SUPPORTS** the following actions ~~to be taken~~ to address minority health disparities and to improve cultural competency of its physician members:

1. The education of physicians regarding racial and ethnic healthcare needs, including disparities in the areas listed above.
2. The promotion of education regarding implicit or explicit biases among healthcare professionals that may play a role in clinical decision-making.
3. The evaluation and analysis of medical information which would permit the targeting of populations who are at greatest risk.
4. The identification of new methods to involve physician members in the communities in which they serve.
5. The identification and integration of available resources to better serve minority communities, including houses of worship, schools and local government.
6. The inclusion of cultural competency training throughout the continuum of osteopathic education.
7. The development of strategies to actively recruit underrepresented minority physicians into the profession in both primary care and subspecialties.
8. The development of approaches to encourage all physicians to provide care to underserved minority populations.

9. The adoption of strategies to assist physicians to effectively communicate with their patients, addressing translation and other barriers to patient understanding.

~~REFERRED RESOLUTION: Breastfeeding While on Medication Assisted Treatment (MAT) Policy Statement~~

~~The attached White paper, titled, "Breastfeeding While on Medication Assisted Treatment (MAT)", and the recommendations within be adopted as policy.~~

~~Breastfeeding While on Medication Assisted Therapy~~

~~Introduction~~

~~Opioid use among pregnant women is a growing public health concern. In 2014,~~

~~the Centers for Disease Control and Prevention (CDC) recorded a 333% national increase in opioid use disorder (OUD) among pregnant women, with 6.5 cases of opioid abuse per 1,000 hospital deliveries, compared to 1.5 cases in 1999.[1] Opioid use during pregnancy is not uncommon; as many as 1 in 5 pregnant women enrolled in Medicaid filled an opioid prescription during their pregnancy.[2] Prenatal opioid exposure has been directly linked to adverse health outcomes for mothers and babies across the nation. These adverse health outcomes include increased maternal mortality and morbidity, poor fetal development, preterm births, still births, birth defects, and increased incidence of Neonatal Abstinence Syndrome (NAS).[3]~~

~~Studies have found that breastfeeding among women being treated for OUD offers many benefits that can mitigate the impacts of OUD for the mother and infant. Benefits include, but are not limited to, reduced hospital stays and decreased need for morphine treatment in infants born with NAS.[4]~~

~~Opioid Use Disorder Treatment~~

~~Medication Assisted Treatment, or MAT, is defined as the use of medications in combination with counseling and behavioral therapies to treat OUD and aid patients in sustaining their recovery.[5] MAT may be utilized with pregnant women to treat opioid use disorder and avoid the severe consequences associated with untreated opioid use disorder or stopping opioid usage too quickly. The U.S. Food and Drug Administration has approved three medications, buprenorphine, methadone, and naltrexone for OUD treatment.[5]~~

~~Naltrexone is the newest therapy approved by the U.S. Food and Drug Administration to treat opioid use disorder in pregnant women. Since it is also the least studied therapy, there is a research gap regarding the safety and effectiveness of naltrexone during pregnancy.[6] As a result, MAT for pregnant women commonly entails the use of methadone or buprenorphine with naloxone, in conjunction with coordinated care among behavioral therapists, OB-GYNs, and addiction specialists.[7] Both methadone and buprenorphine treatment are endorsed by the American College of Obstetricians and Gynecologists and the American Society of Addiction Medicine as best practices for addressing opioid use during pregnancy.[4]~~

~~Methadone, a long-acting opioid agonist that decreases the desire to take opioids, was established as the standard of care in 1998 for treating OUD in pregnant women. The Substance Abuse and Mental Health Service Administration (SAMHSA) identified methadone as a safe drug to take while pregnant or preparing for pregnancy, along with counseling and participation in social support programs.[8]~~

~~Recently, The American Society of Addiction Medicine (ASAM) recognized Buprenorphine combined with Naloxone as the standard of care for the treatment of women who are pregnant or breastfeeding with OUD. The American Osteopathic Academy of Addiction Medicine (AOAAM) supports ASAM consensus that the combination of Buprenorphine and Naloxone is regularly used, safe, and effective.[9] Buprenorphine is the first medication to treat opioid use disorder that was authorized to be administered in physician offices, resulting in improved access to treatment.[10] Studies indicate that buprenorphine reduces fluctuations in fetal levels of opioids, minimizes repeated prenatal withdrawal, decreases overdoses, and limits drug interactions.[10]~~

~~Neonatal withdrawal, also called neonatal abstinence syndrome (NAS), is an anticipated and treatable condition caused by perinatal exposure to opioids, including methadone and the combination of buprenorphine with naloxone.[11] Although NAS may still occur in infants whose mothers receive MAT, the symptoms are milder than they would be without treatment.[4]~~

~~Postpartum, both infants and women on maintenance therapies can experience greater benefits through breast feeding. Although trace amounts of both methadone and buprenorphine have been found to seep into breast milk, research has shown that the benefits of breastfeeding outweigh the negligible risk associated with the medication that enters breastmilk.[8, 10]~~

~~**Breastfeeding**~~

~~Because of the associated benefits, exclusive breastfeeding, without other supplementation, is recommended for healthy women by both the American Academy of Pediatrics and the World Health Organization for the first 6 months of life.[12,13] Breastfeeding contributes to attachment between a woman and her infant, encourages skin-to-skin contact.[11] The antibodies and hormones found in breast milk defend the infant's immune system against illness and lower the risk of asthma, leukemia, childhood obesity, lower respiratory infections, eczema, diarrhea, vomiting, and Sudden Infant Death Syndrome.[14] Breastfeeding also improves the health of mothers post-delivery, simultaneously, lowering potential risk for diabetes, breast cancer, and ovarian cancer. Breast milk is also easier for infants to digest and cost efficient for parents.[14]~~

~~The American Academy of Pediatrics (AAP) recommendation applies to women who take methadone or buprenorphine as well, without regard for dosage.[15] Breastfeeding among women who are opioid dependent is also encouraged by both, the American College of Obstetricians and Gynecologists (ACOG) and the American College of Osteopathic Obstetricians and Gynecologists (ACOOG), as long as the women are taking methadone or buprenorphine consistently, abstaining from illicit drugs, and have no underlying complexities or conditions, such as human immunodeficiency virus (HIV) and or Hepatitis C with open/bleeding and cracked nipples.[11] Additionally, The ACOOG supports the ACOG committee review that women in the post-partum period who return to using street drugs and are not on stable OUD therapy should restrain from breastfeeding.[16] After 6 months, the AAP recommends continuation of breastfeeding, alongside introduction of complementary foods during the first year of life.[12]~~

~~In spite of these endorsements, less than 25% of mothers exclusively breastfeed for 6 months in the United States.[12] Formula supplementation of breast milk is commonly utilized. Supplementation is reportedly associated with many side effects that can lead to adverse infant and maternal outcomes. Formula supplements can negatively impact the "maternal milk supply, the duration of exclusive breastfeeding, and the infant's gut microbiome; alteration of the neonatal gut environment can be responsible for mucosal inflammation and disease, autoimmunity disorders, and allergic conditions in both childhood and adulthood".[17]~~

~~The Centers for Disease Control and Prevention established the breastfeeding report card, which provides national data on breastfeeding rates, breastfeeding support indicators, and breastfeeding practices.[12] The breastfeeding report card~~

~~indicates that, in 2015, 83.2% of infants were breastfed starting at birth, 57.6% were still breastfed at some level at 6 months, and 35.9% at 12 months.[12] This data suggests that "the early postpartum period is a critical time for establishing breastfeeding, but mothers may not be getting the support they need from health care providers, family members, and employers to meet their breastfeeding goals".[12]~~

~~Uptake of breastfeeding is likely even lower among women with OUD. National Institute on Drug Abuse (NIDA) states that the rate of breastfeeding is normally "low" among mothers with OUD. Increased formal breastfeeding education, direct support for mothers, health care providers training on breastfeeding techniques, and peer support are all effective interventions that promote the start and sustainability of breastfeeding among mothers.[18]~~

~~Conclusion~~

~~Increasing rates of maternal opioid use during pregnancy and NAS are public health concerns. The utilization of MAT with methadone or buprenorphine has been approved as a safe mechanism for combatting opioid use during pregnancy and while breastfeeding.~~

~~Breastfeeding improves maternal and infant morbidity and mortality and decreases the impact of adverse health conditions. Breastfeeding infants who were exposed to opioids prenatally have the added advantage of lessening the impact of other conditions, such as NAS. Encouraging breastfeeding among mothers with exposure to opioids, who are undergoing MAT, is a significant step toward addressing OUD and NAS and improving maternal and child health. It shall be noted that the ACOOG and AOAAM supports the content of this paper and the policy recommendations outlined to encourage exclusive breastfeeding among mothers with a history of OUD.~~

~~American Osteopathic Association Policy~~

~~Given the research surrounding the positive impact of breastfeeding, the American Osteopathic Association adopts the following policy statements as its official position on breastfeeding among mothers with exposure to opioid use disorder in the United States:~~

1. ~~The American Osteopathic Association (AOA) acknowledges that exclusive breastfeeding significantly improves maternal and infant health outcomes.~~
2. ~~The American Osteopathic Association supports methadone and buprenorphine/naloxone assisted treatment as standards of care for addressing opioid use disorder during pregnancy and in the postpartum period.~~
3. ~~The American Osteopathic Association (AOA) encourages exclusive breastfeeding among mothers with a history of Opioid Use Disorder (OUD), who are under physician care, actively engaged in a recovery program, on appropriate opioid agonists (methadone or buprenorphine), abstaining from illicit drugs, and who have no other contraindications, such as human immunodeficiency virus (HIV) infection and or Hepatitis C with open/bleeding and cracked nipples.~~
4. ~~The American Osteopathic Association (AOA) recommends the use of counseling, coordination of care, and social support for mothers during~~

~~pregnancy and breastfeeding in the postpartum period.~~

SUBJECT: UNDERREPRESENTED MINORITIES – INCREASING NUMBERS OF APPLICANTS, GRADUATES AND FACULTY AT COLLEGES OF OSTEOPATHIC MEDICINE - SOURCE: H-454/A20

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, excluding 2020 and 2022, there has been a steady increase in **UNDERREPRESENTED MINORITIES (**URM**)** Applicants from 2019 to 2024. Excluding 2021 and 2022, there has been a steady increase in matriculants from 2019 to 2024; and

WHEREAS, comparing 2021-22 graduates to 2022-2023 graduates, the URM for graduation increased by 2.6%; however, there was a demographic decline for American Indian/Alaska Native, Black/African American, and non-Hispanic compared to 2021-2022 graduates; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has provided amendments to provide clarity and updates to the policy, now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA) encourages **EFFORTS TO RECRUIT AND TRAIN QUALIFIED URM STUDENT APPLICANTS AND FACULTY BY COLLEGES OF OSTEOPATHIC MEDICINE.** ~~an increase in the total number of URM1 graduates **AND FACULTY** from colleges of osteopathic medicine by the year 2020 and encourages an increase in the total number of URM faculty by the year 2025 **2030**~~

SUBJECT: REGULATION OF E-CIGARETTES AND NICOTINE VAPING - SOURCE: RESOLUTION NO. H455-A/20

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the current white paper provides detailed information on e-cigarettes and vaping, and their health consequences and regulation; and

WHEREAS, the CDC website includes numerous pages that are devoted to nicotine and other potential harms of e-cigarettes, nicotine addiction and withdrawal, and the impact of e-cigarettes and vaping on youth[1-3]; and

WHEREAS, the FDA website has detailed information about the regulation of e-cigarettes, vapes, and other Electronic Nicotine Delivery Systems (ENDS)[4]; and

WHEREAS, after reviewing this information, the Bureau of Osteopathic Research and Public Health recommends the updated policy statements in lieu of the white paper, now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

REGULATION OF E-CIGARETTES AND NICOTINE VAPING

THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) ADOPTS THE FOLLOWING POLICY STATEMENTS ON E-CIGARETTES AND VAPING:

1. **THE AOA SUPPORTS FDA AND STATE REGULATION OF THE INGREDIENTS IN ALL ELECTRONIC CIGARETTE CARTRIDGES, REQUIRING INGREDIENT LABELS AND WARNINGS, AND ELIMINATING THE USE OF FLAVORS THAT ARE BANNED IN TRADITIONAL CIGARETTES.**

2. **THE AOA SUPPORTS FDA AND STATE REGULATION PROHIBITING SALES AND ADVERTISEMENTS OF ELECTRONIC CIGARETTES TO PERSONS UNDER THE AGE OF 21. ADVERTISEMENTS FOR ELECTRONIC CIGARETTES SHOULD BE SUBJECT TO THE SAME RULES AND REGULATIONS THAT ARE ENFORCED ON**

TRADITIONAL CIGARETTES.

3. **THE AOA FURTHER ENCOURAGES FEDERAL, STATE AND LOCAL GOVERNMENT ACTION TO BAN THE USE OF ELECTRONIC CIGARETTE DEVICES IN ALL SPACES WHERE TRADITIONAL CIGARETTES ARE CURRENTLY BARRED FROM USE.**

4. **THE AOA PROMOTES TOBACCO AND NICOTINE CESSATION TREATMENT, AND THE USE OF ANY SUCH TREATMENT THAT HAS BEEN PROVEN SAFE AND EFFECTIVE BY THE US FOOD AND DRUG ADMINISTRATION (FDA). THERE IS CURRENTLY NO E-CIGARETTE APPROVED BY THE FDA TO HELP PEOPLE QUIT SMOKING.**

5. **THE AOA SUPPORTS RESEARCH BY THE FDA AND OTHER ORGANIZATIONS INTO THE HEALTH AND SAFETY IMPACT OF E-CIGARETTES AND LIQUID NICOTINE.**

6. **THE AOA ENCOURAGES PHYSICIANS TO EDUCATE PATIENTS ABOUT THE RISKS OF E-CIGARETTE USE, AND TO COUNSEL PATIENTS TO SUBMIT VOLUNTARY REPORTS TO THE US DEPARTMENT OF HEALTH AND HUMAN SERVICES SAFETY REPORTING PORTAL (WWW.SAFETYREPORTING.HHS.GOV) IF THEY SUSTAIN ADVERSE REACTIONS TO E-CIGARETTES.**

7. **THE AOA DISCOURAGES THE PLACEMENT OF MEDICAL PRACTICES AND LIMITED-SERVICE CLINICS IN RETAIL SETTINGS THAT PROMOTE AND SELL TOBACCO.**

~~REGULATION OF E-CIGARETTES AND NICOTINE VAPING~~

~~**BACKGROUND**~~

~~The adverse health effects associated with tobacco use are well documented public health concerns. Smoking can damage every human organ, and it can lead to death from heart disease, cancers or strokes. According to the World Health Organization (WHO), 1 in 10 deaths each year, or nearly 8 million deaths around the world, are caused by tobacco use.[1,2] More than 7 million of those deaths are the result of direct tobacco use, while around 1.2 million are the result of non-smokers being exposed to second-hand smoke.[2] In the United States, this translates to 480,000 deaths per year from cigarette smoking and second-hand smoke exposure.[3]~~

~~In response to the negative health effects of tobacco products and cigarettes in particular, a natural market for smoking cessation and reduction products has emerged over the past 4 decades.[4] The use of electronic nicotine delivery systems (ENDS), such as electronic cigarettes (e-cigarettes), has reached a rapidly expanding consumer base.[5] E-cigarettes are often used or promoted to reduce consumption of tobacco products.[6] Alternative strategies for reaching smoking cessation goals include switching to low or light cigarettes or using nicotine-infused chewing gum, lozenges, lollipops, dermal patches or hypnosis.[7]~~

~~In the US, e-cigarettes are the most frequently utilized tobacco product among youth, who are also more likely than adults to use them. In 2019, over 5 million US middle and high school students had used e-cigarettes in the past 30 days.[8] In 2018, 3.2% of US adults were current e- cigarette users.[9]~~

~~The name e-cigarette is an umbrella term that includes any battery-powered device that vaporizes liquid nicotine for delivery via inhalation. These devices are most commonly referred to as electronic cigarettes, e-cigarettes, e-cigs, vaping, vape pens, vape pipes, hookah pens, e- hookahs, but could potentially be referred to by other terms. Since its 2007 introduction in the United States, the e-cigarette market has grown to include more than 460 brands.[10] E-cigarettes are a 2.5 billion dollar business in the United States.[11] The attraction to e-cigarettes crosses many segments of the population, appealing to tobacco cigarette smokers trying to quit as well as non-smokers who want to try nicotine without the harmful additives.[12] Though some states and municipalities have started to ban e-cigarettes, tobacco cigarette smokers can use e- cigarettes as a source of nicotine in some venues where conventional cigarettes are banned.~~

~~Costs associated with smoking-related illnesses continue to escalate. In 2014, smoking-related illness costs in the United States were more than $300 billion each year, including approximately $170 billion for direct medical care for adults, and more than $156 billion in lost productivity. Nearly $5.6 billion of the lost productivity cost was due to secondhand smoke exposure.[13]~~

~~Overall, e-cigarettes may be less harmful for heavy or moderate smokers because they may reduce exposure to carcinogens and other toxic chemicals that cause serious disease and death.[14] However, the effect of long term consumption of nicotine and associated aerosols remains unclear. Studies have shown that e-cigarette vapors may be harmful, particularly in places with limited ventilation and for people with compromised health. Furthermore, e-juice liquids have been found to increase accidental poisonings in children. The full scale of health and safety hazards of vaping for users and secondhand users is undetermined.[15]~~

~~ANALYSIS~~

~~Regulation of e-cigarettes by the Food and Drug Administration (FDA) only began in earnest in 2016. The Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act) provided the FDA authority to regulate the manufacture, marketing and distribution of tobacco products.[16] However, e-cigarettes were not initially included in the FDA's regulation of tobacco products. Unlike tobacco cigarettes, e-cigarettes have enjoyed the ability to advertise on television and radio.[17] This allows e-cigarette companies to market their product in a more liberal fashion in response to market demands, including the use of celebrity endorsements.[18] However, some manufacturers have voluntarily begun to limit their advertising in an attempt to avoid federally imposed restrictions on advertising.~~

~~The Composition of E-Cigarettes~~

~~The e-cigarette is a smokeless, battery-powered device that vaporizes liquid nicotine for delivery via inhalation.[19] Using an e-cigarette may also be referred to as "vaping", or as "juuling", the branded form of flavored e-cigarettes popular among younger consumers. The e-cigarette contains nicotine derived from tobacco plant and several secondary chemical ingredients.[20] It is primarily composed of a nicotine cartridge, atomizer, and a battery.[21] The atomizer, which converts the nicotine liquid into a fine mist, consists of a metal wick and heating element.[22] When screwed onto the cartridge, the nicotine liquid from the cartridge, which could also include flavoring, comes into contact with the atomizer unit and is carried to the metal coil heating element.[23] A single cartridge can hold the nicotine equivalent of an entire pack of traditional cigarettes.[24] E-cigarettes can also be used to deliver marijuana and other drugs.[25]~~

~~While the typical e-cigarette is sold in the shape of a cigarette, many products are sold in the shape of discreet objects such as pipes, pens, lipsticks, and other everyday items.[26] Often, they can be legally used where traditional tobacco products are banned.~~

~~Federal Efforts to Regulate~~

~~In 2016, the FDA finalized a rule extending regulatory authority to cover all tobacco products, including electronic nicotine delivery systems (ENDS) that meet the definition of a tobacco product.[27] The FDA now regulates the manufacture, import, packaging, labeling, advertising, promotion, sale, and distribution of ENDS. Prior to this rule, the FDA could regulate e-cigarettes only if the manufacturer made a therapeutic claim, such as the product was being marketed as a cessation device.[28]~~

~~The rule established restrictions on youth access to newly regulated tobacco products by: (1) banning their sale to individuals younger than 18 years of age (federal legislation raised this to 21 years in 2019) and requiring age verification via photo ID; and (2) prohibiting the sale of tobacco products in vending machines (unless in an adult-only facility).[29]~~

~~The Federal Food, Drug, and Cosmetic Act was signed into law on December 20, 2019, and raised the federal minimum age of sale for tobacco products from 18 to 21 years.[30] Retailers are now prohibited from selling tobacco products to anyone under the age of 21.~~

~~Further, in January 2020, the FDA banned all mint- and fruit-flavored e-cigarettes, but exempted menthol- and tobacco-flavored products, in an effort to target products widely used by minors while preserving an "off-ramp" for adults who are trying to quit~~

~~smoking.[31]~~

~~Tobacco is a major threat to public health, and one of the goals of the FDA is to protect Americans from tobacco-related diseases and death. This rule allows the FDA to protect youth by restricting their access to tobacco products, helps consumers better understand the risks of using these products, prohibits false and misleading product claims, and prevents new tobacco products from being marketed unless a manufacturer demonstrates that the product meets relevant public health standards.~~

~~State Efforts to Regulate~~

~~Various states and municipalities have also enacted laws restricting the sale of e-cigarettes.[32] Twenty-seven states, along with the District of Columbia, Puerto Rico, and the U.S. Virgin Islands, and 1,107 municipalities have passed laws that ban smoking in all non-hospitality workplaces, restaurants, and bars; of these, 22 states and 929 municipalities also restrict e- cigarette use in 100% smoke-free venues.[33]~~

~~In November 2019, **Massachusetts** became the first state to restrict the sale of *all* flavored tobacco products, including e-cigarettes and menthol cigarettes.[34] **New Jersey** prohibited the use of e-cigarettes in all enclosed indoor places of public access as well as in working places, and in January 2020, the state enacted legislation banning the sale of *all* flavored e- cigarettes.[35,36] In March 2020, **Rhode Island** also announced a permanent ban on the sale of flavored e-cigarettes.[37] Six other states (Michigan, Montana, New York, Oregon, Utah and Washington) temporarily banned the sale of flavored e-cigarettes in 2019, but of those, only Montana's and Washington's bans are currently in effect while the others are facing various legal challenges.[38]~~

~~As of 2019, twenty-three (23) states and the District of Columbia have enacted statutes which require licenses for retail sales of e-cigarettes.[39]~~

~~Arguments for E-Cigarettes~~

~~Proponents of e-cigarettes consider e-cigarettes to be less harmful than traditional tobacco products and believe they increase adult smoking cessation.[40] While it has been established that e-cigarettes contain fewer carcinogenic elements than traditional tobacco cigarettes, the long-term health effects of e-cigarette use are unknown.[41] According to the American Lung Association there are approximately 600 ingredients in cigarettes.[42] When burned, they create more than 7,000 chemicals.[43] At least 69 of these chemicals are known to cause cancer, and many are poisonous.[44] While e-cigarettes may have fewer component chemicals, a study found that the usage of e-cigarettes contributes to indoor air contamination.[45] A 2016 report from the WHO determined that second-hand aerosols from e-cigarettes are a new source of pollution for hazardous particulate matter (PM). The levels of nickel, chromium, and other metals found in second-hand aerosols are higher than ambient air and higher than second-hand tobacco smoke.[46]~~

~~The greatest appeal of e-cigarettes for smoking cessation is that they deliver nicotine to alleviate nicotine withdrawal symptoms. E-cigarettes evoke the psychological response to cigarette smoking because of its shape and the familiar behavior aspect of smoking.[47] A 2011 survey of 104 e-cigarette users revealed that 66% started using them with the intention to quit smoking and almost all felt that the e-cigarette had helped them to succeed in quitting smoking.[48] Another survey of 3,037 e-cigarette users revealed that 77% of respondents used e- cigarettes to quit smoking or to avoid~~

~~relapse.[49] None said they used them to reduce consumption of tobacco with no intent to quit smoking.[50] However, the overall effectiveness of e- cigarettes is still in question. In a randomized study, participants given e-cigarettes, nicotine patches and placebo e-cigarettes that lacked nicotine were able to quit smoking at roughly the same rates, with insufficient statistical power to conclude superiority of nicotine e-cigarettes.[51]~~

~~Consequences of E-Cigarettes~~

~~Advocates of e-cigarettes contend that e-cigarettes are less risky than traditional tobacco products and can serve as a mode of harm reduction by reducing smoking or serving as a smoking cessation strategy.[52] While there is limited evidence that suggests that adult smokers could benefit from e-cigarette use instead of combustible tobacco products, smokers would need to fully switch to e-cigarettes and stop smoking cigarettes and other tobacco products completely to achieve any meaningful health benefits from e-cigarettes. Experts who serve on the US Preventive Services Task Force have resolved that there is insufficient evidence to recommend e-cigarettes for smoking cessation in adults, including pregnant women. Thus, e-cigarettes are not currently approved by the FDA as an aid to quit smoking.[53]~~

~~Another major concern is that e-cigarettes appeal to youth by being flavorful, trendy and a convenient accessory.[54] The flavorings being used, such as candy and other sweet flavorings are particularly attractive to younger populations. For this reason, these flavorings are banned in traditional cigarettes.[55] Despite a downturn prior to 2017, e-cigarette use among youth has drastically increased. From 2017 to 2018, the percent of middle school students who used e- cigarettes increased 48%, resulting in 570,000 middle school students, or 4.9%, who were current e-cigarette users. Among high school students during the same period, current e- cigarette use, defined as use at least one day in the past 30 days, increased by 78%, from 11.7% to 20.8%, the equivalent of 3.05 million high school students using e-cigarettes in 2018. Current e-cigarette users in high school who reported use on 20 days or more in the past 30- day period increased from 20% to 27.7%. During the same timeframe, use of flavored e- cigarettes increased among high school students who currently used e-cigarettes as well. Use of any flavored e-cigarette went up among current users from 60.9% to 67.8%, and menthol use increased from 42.3% to 51.2% among all current e-cigarette users, including consumers of multiple products, and from 21.4% to 38.1% among those using only e-cigarettes. From 2018 to 2019, the number of middle school and high school students who reportedly used e-cigarettes in the past 30 days increased from a total of 3.6 million to 5.4 million youth.[56]~~

~~In addition to exposure to the carcinogenic and toxic effects of tobacco, smokers become addicted to the nicotine.[57] Nicotine addiction is characterized as a form of drug dependence recognized in the Diagnostic and Statistical Manual of Mental Disorders (DSM-V).[58] E-cigarette cartridges can contain up to 20 times the nicotine of a single cigarette, and the process of vaping lacks the normal cues associated with cigarette completion, such as the butt of the cigarette ending a dose.[59]~~

~~Conditioning has a secondary role in nicotine addiction. Smokers associate particular cues with the high of smoking, often causing relapse when those seeking to quit smoking are confronted with those cues.[60] E-cigarettes allow quitting smokers to respond to those cues. This poses a risk of overconsumption. The lack of finality to an e-cigarette is determined only by the battery or nicotine cartridge.~~

~~Distinguishable from tobacco cigarettes, smokers who have turned to the e-cigarette no longer have the butt of the cigarette as a cue to stop smoking.[61]~~

~~E-cigarettes can cause other inadvertent injuries as well. The CDC, the US Food and Drug Administration (FDA), state and local health departments, and other clinical and public health organizations have investigated a national outbreak of e-cigarette, or vaping, product use- associated lung injury (EVALI).[62] EVALI is an inflammatory response in the lungs triggered by inhaled substances. EVALI has been found to vary due to the substantial variety of products and ingredients used. It may present as pneumonia or an inflammatory condition known as fibrinous pneumonitis.[63] As of February 2020, 2,807 hospitalized EVALI cases or deaths were reported to CDC from all 50 states, the District of Columbia, Puerto Rico and U.S. Virgin Islands. Sixty-eight (68) deaths were confirmed in 29 states and the District of Columbia. Vitamin E acetate, an additive in some THC-containing e-cigarette products, was found to be strongly associated with the EVALI outbreak.[64]~~

~~Additionally, e-cigarettes are manufactured from metal and ion components that introduce concerns about faulty products and malfunctions.[65] Defective e-cigarette batteries have caused fires and explosions, some of which have resulted in serious injuries. Lithium-ion batteries have reportedly overheated, caught fire or exploded; an event known as thermal runaway. From 2015 to 2017, an estimated 2,035 e-cigarette explosions and burn injuries presented to hospital emergency departments. Although the explosions are relatively rare, they can cause severe injuries.[66]~~

~~CONCLUSION~~

~~The AOA supports FDA and state regulation of the ingredients in all electronic cigarette cartridges, requiring ingredient labels and warnings, and eliminating the use of flavors that are banned in traditional cigarettes.~~

~~The AOA supports FDA and state regulation prohibiting sales and advertisements of electronic cigarettes to persons under the age of 21. Advertisements for electronic cigarettes should be subject to the same rules and regulations that are enforced on traditional cigarettes.~~

~~The AOA further encourages federal, state and local government action to ban the use of electronic cigarette devices in all spaces where traditional cigarettes are currently barred from use.~~

~~The AOA promotes tobacco and nicotine cessation treatment, and the use of any such treatment that has been proven safe and effective by the FDA.~~

~~The AOA supports research by the FDA and other organizations into the health and safety impact of e-cigarettes and liquid nicotine.~~

~~The AOA encourages physicians to educate patients about the risks of e-cigarette use, and to counsel patients to submit voluntary reports to the US Department of Health and Human Services Safety Reporting Portal (www.safetyreporting.hhs.gov) if they sustain adverse reactions to e-cigarettes.~~

SUBJECT: **UNPASTEURIZED** RAW MILK **AND DAIRY PRODUCTS** – HEALTH RISKS **OF** – SOURCE: SR-H416-A/19; REFERRED-H413-A/24

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) submitted H416-A/19 Raw Milk - Health Risks to the 2024 House of Delegates during the sunset review process and recommended that it be reaffirmed; and

WHEREAS, the 2024 House of Delegates referred this policy back to BORPH and requested that BORPH review current data and update the policy; and

WHEREAS, Koski L et al[1] published a paper in 2022 in Epidemiology and Infection which supports findings of previously published reports indicating that state laws resulting in increased availability of unpasteurized milk are associated with more outbreak-associated illnesses and outbreaks; and

WHEREAS, the U.S. Food and Drug Administration (FDA)[2] published a document on its website entitled "Raw Milk Misconceptions and the Danger of Raw Milk Consumption," which outlines 14 myths around raw milk and disputes these myths based on scientific literature; and

WHEREAS, the Centers for Disease Control and Prevention (CDC)[3] states on its website that: 1. Pasteurization is crucial for milk safety, killing harmful germs that can cause illness; 2. Consuming raw milk can lead to serious health risks, especially for certain vulnerable populations; 3. Drinking or eating products made from raw milk can expose people to germs such as *Campylobacter, Cryptosporidium, E. coli, Listeria, Brucella,* and *Salmonella*. (as of 1-31-2025, accessed 4-2-2025); and

WHEREAS, the American Academy of Pediatrics[4] strongly supports the position of the FDA and other national and international associations in endorsing the consumption of only pasteurized milk and milk products for pregnant women, infants, and children; now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) ADOPTS THE FOLLOWING POLICY STATEMENTS:

1. **THE AOA SUPPORTS THE CONSUMPTION OF PASTEURIZED MILK AND DAIRY PRODUCTS OVER THOSE THAT ARE RAW AND/OR UNPASTEURIZED.**

2. **THE AOA AGREES WITH THE CDC, THE FDA, AND THE AMERICAN ACADEMY OF PEDIATRICS THAT DRINKING RAW MILK AND CONSUMING UNPASTEURIZED DAIRY PRODUCTS CAN LEAD TO SERIOUS HEALTH RISKS, ESPECIALLY FOR CERTAIN VULNERABLE POPULATIONS, INCLUDING INFANTS, CHILDREN, THE ELDERLY, PEOPLE WITH WEAKENED IMMUNE SYSTEMS, AND PREGNANT WOMEN.**

3. **THE AOA ENCOURAGES OSTEOPATHIC PHYSICIANS TO EDUCATE THEIR PATIENTS ON THE SAFETY CONCERNS AND THE HEALTH RISKS OF CONSUMING RAW MILK AND THE BENEFITS OF CONSUMING PASTEURIZED MILK AND DAIRY PRODUCTS IF AND WHEN APPROPRIATE.**

4. **THE AOA SUPPORTS CONTINUED RESEARCH INTO THE SAFETY, MICROBIOME EFFECTS, AND OVERALL HEALTH OUTCOMES OF RAW MILK CONSUMPTION TO GUIDE EVIDENCE-BASED RECOMMENDATIONS.**

5. **THE AOA ENCOURAGES COLLABORATION BETWEEN THE CDC, THE FDA, PUBLIC HEALTH AGENCIES, RAW MILK PRODUCERS, AND CONSUMERS TO DEVELOP STANDARDIZED SAFETY PRACTICES FOR RAW MILK INTENDED FOR DIRECT HUMAN CONSUMPTION, INCLUDING TESTING, CERTIFICATION, AND TRANSPARENT LABELING.**

~~The American Osteopathic Association (AOA) believes that all milk sold for human consumption should be required to be pasteurized; and encourages osteopathic physicians to educate their patients on the safety concerns and the health risks of consuming raw milk.~~

ACTION TAKEN: ___Adopted as Amended_

DATE: ____July 19, 2025_____

SUBJECT: REAFFIRMING COMMITMENT TO EVIDENCE-BASED PROTECTION AGAINST VACCINE-PREVENTABLE ILLNESSES

SUBMITTED BY: American College of Osteopathic Pediatricians

REFERRED TO: Committee on Public Affairs

WHEREAS, Jonas Salk developed the inactivated polio vaccine in the 1950s, resulting in a decrease of annual cases of 58,000 in 1957, to 161 in 1961, and eradication in 1994, ushering in an age of preventing deadly illness through vaccine efficacy in the United States; [1] and

WHEREAS, in the decade leading up to the vaccine, measles cases numbered more than three million per year in the U.S. with a drastic decline after the invention of the measles vaccine in 1963 and official eradication of measles from the U.S. in 2000, with just 47 cases in 2023 (2,3); and

~~WHEREAS, as a result of the 1989-1991 measles epidemic, Congress passed the Omnibus Budget Reconciliation Act of 1993 which formed the Vaccine for Children program which provided free access to vaccines to all eligible children less than 18 years old. To date this program has prevented more than 472 million illnesses, and 29.8 million hospitalizations; amounting to over $2.2 trillion in healthcare cost savings [4]; and~~

~~WHEREAS, per a Jan. 12, 2025, New York Times report, even prior to the current administration the percentage of kindergarteners entering with complete MMR vaccination had fallen from 95% to <93% which is equal to 280,000 children entering the classroom without protection from measles [5]; and~~

~~WHEREAS, the current Secretary of Health and Human Services (HHS) has a long history of using mis- and disinformation to promote debunked claims about the link between vaccines and neurodevelopmental outcome such as autism; and~~

WHEREAS, as of April 10, 2025, there have been 712 confirmed measles cases in the United States and 3 deaths, including 2 children, with 97% of these cases coming from individuals who are either unvaccinated or with an unknown vaccination status. This number already eclipses the 285 total cases reported for 2024 [6]; and **NOW THEREFORE BE IT**

~~WHEREAS, the U.S. is at risk of losing its status of having eradicated measles if this trend continues; now, therefore be it~~

RESOLVED, that the American Osteopathic Association (AOA) reaffirms its support for evidence-based medicine regarding the safety and efficacy of vaccinations; and be it further

RESOLVED, that the AOA supports continued public education on vaccine safety and efficacy not limited to support of community efforts to distribute information regarding the benefits of routine childhood vaccinations; and, be it further

RESOLVED, that the AOA commits to combating vaccine mis- and disinformation ~~including rejecting any literature or proclamations linking~~ **ABOUT** vaccines ~~to autism~~; and be it further

RESOLVED, that the AOA will actively oppose any and all legislation **AND EXECUTIVE ORDERS** aimed at ~~utilizing debunked science to restrict~~ **RESTRICTING** the ongoing access to ~~free~~ routine vaccination as a means of stopping the spread of preventable illness.

ACTION TAKEN ___Adopted as Amended_

DATE _____July 19, 2025_____

SUBJECT: CONTINUED SUPPORT OF ACCESS TO AND RESEARCH ON NATIONAL NEWBORN METABOLIC SCREENING PROTOCOLS

SUBMITTED BY: American College of Osteopathic Pediatricians

REFERRED TO: Committee on Public Affairs

WHEREAS, since its inception in 1960, newborn metabolic screenings have been a vital component of public health in the United States to detect potential serious conditions, as required by law[1]; and

WHEREAS, the Advisory Committee on Heritable Disorders in Newborns and Children (ACHDNC) recommends that every screening panel for newborns screen for 36 core conditions and an additional 26 secondary disorders put forth by the Secretary of the U.S. Department of Health and Human Sciences (HHS)[2]; and

WHEREAS, newborn screening programs are limited due to variation across states[3,4,5]; currently only two state programs offer newborn screening panels spanning all 36 conditions recommended on the Recommended Uniform Screening Panel (RUSP) and only 27 screen for at least 35 conditions[6]; and

WHEREAS, researchers estimated savings of $2.4 million per 100,000 infants screened over 60 years in spinal muscular atrophy alone[7]; and

WHEREAS, a study utilizing the National Survey of Children's Health determined that between 2016-2017, 2.8 million children ages 0-17 years old have a genetic condition emphasizing the need for effective screenings[8]; and

WHEREAS, a retrospective study conducted with 573 infants that died before the age of one had determined that 22% of the infants had a laboratory-confirmed genetic diagnosis, and 52% of those diagnosed were determined postnatally[9]; and

WHEREAS, parents/guardians of children with a positive newborn screening test reported less difficulty in receiving necessary specialist care as compared with reports of parents/guardians of children with genetic conditions who were diagnosed later[7]; and

WHEREAS, a 2020 study published in *Pediatrics*, stated that over 95% of subjects in a long-term study of children identified with inborn errors of metabolism, identified by Newborn Screenings, were successfully reaching age-appropriate developmental milestones; and,

WHEREAS, the same 2020 study stated that without these screenings, the children would have been susceptible to chronic neurologic dysfunction and mortality[10]; and

WHEREAS, a 2021 article also published in *Pediatrics* collected evidence that early diagnosis through screening prevented severe malnutrition and improved long term growth in infants diagnosed with cystic fibrosis, has proved newborn screening's utility in the interest of public health[11]; and

WHEREAS, while guidance has historically been put forth by the U.S. Secretary of HHS through the Recommended Uniform Screening Panel (RUSP), states still create and regulate their own screening policies which results in a lack of procedural standardization[1,12]; and

WHEREAS, as of a March 27, 2025, statement from the HHS announcing the consolidation of the Health Resources and Services Administration (HRSA) into the new Administration for a Healthy America (AHA)[13] which has led to the functional dissolution of both the ACHDNC and RUSP, leaving the newborn screening program without a source of guidance or funding, now therefore be it;

~~RESOLVED, that the American Osteopathic Association (AOA) commits to joining any advocacy efforts for the immediate reinstatement of the ACHDNC and RUSP; and, be it further~~

RESOLVED, THAT THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) SUPPORTS EFFORTS TO CREATE CLINICAL GUIDELINES THAT DESCRIBE EVIDENCE BASED RECOMMENDED UNIFORM SCREENING OF NEWBORNS, EITHER THROUGH THE REINSTATEMENT OF AN ADVISORY COMMITTEE UNDER HEALTH AND HUMAN SERVICES (HHS) TO ISSUE GUIDANCE OF HERITABLE DISORDERS IN NEWBORNS AND CHILDREN AND A RECOMMENDED UNIFORM SCREENING PANEL, OR THE DEVELOPMENT OF EVIDENCE BASED GUIDELINES BY PHYSICIAN ORGANIZATIONS.

RESOLVED, that the AOA supports an increase in research on the improved benefit of ~~interstate~~ standardization of screening protocols and their role in early diagnosis and treatment of newborn illnesses; and, be it further

RESOLVED, that the AOA encourages osteopathic physicians to increase accessibility to expecting parents on educational resources that address disparities around screening protocols, conditions available for screening, and how prompt identification and treatment of these disorders may lead to more favorable outcomes

REFERRED TO: Committee on Public Affairs

WHEREAS, obesity is a complex, chronic disease influenced by genetic, environmental, physical, and emotional factors, necessitating a multimodal treatment approach including pharmacotherapy, lifestyle, and behavioral modifications[1,2]; and

WHEREAS, incretin-mimetic medications such as glucagon like peptide-1 receptor agonists (GLP-1 RAs) and gastric inhibitory polypeptides (GIPs) have been shown to be effective in reducing body weight, appetite, food cravings, and energy intake while increasing satiety and improving eating control[3,4,5,6,7]; and

WHEREAS, the current access to these incretin-mimetic medication for obesity management remains limited due to high costs and insurance coverage restrictions, creating significant barriers for patients who could benefit from their use[8,9,10]; and

WHEREAS, GLP-1 RAs and GIP therapeutics ~~are~~ **IN SELECTED CASES MAY BE** more effective compared to the alternative anti-obesity medications, such as phentermine-topiramate and naltrexone-bupropion, which have demonstrated efficacy but are associated with significant negative side effects[11,12]; and

WHEREAS, the economic burden of obesity is estimated at $260.6 billion annually in the United States, and improved access to effective pharmacotherapy may reduce long-term healthcare costs by mitigating obesity-related comorbidities[13]; and

WHEREAS, research suggests that the cost-effectiveness of covering pharmacotherapy for obesity may outweigh the long-term financial burden of untreated obesity and its associated comorbidities[14,15]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports policies that reduce financial barriers for patients seeking access to incretin-mimetic medications, while promoting transparency and flexibility within insurance plans to allow for diverse treatment options; and, be it further

RESOLVED, the AOA supports continued research, education, and advocacy to expand awareness and appropriate utilization of pharmacotherapy within the context of multimodal obesity care.

SUBJECT: ADVOCATE FOR ACCESS TO OVERWEIGHT AND OBESITY CARE

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS, Per the Centers for Disease Control (CDC), from August 2021 to August 2023, the prevalence of obesity among adults in the United States was 40.3%, which remains above the Healthy People 2030 goal of 36.0%;[1]

WHEREAS**,** In June 2013, the American Medical Association (AMA) House of Delegates voted to recognize obesity as a disease state requiring treatment and prevention efforts;[2]

WHEREAS**,** the majority of insurance providers continue to exclude reimbursement for weight management visits, as well as coverage of ~~Federal~~ **FOOD AND** Drug **ADMINISTRATION** ~~Agency~~ (FDA) approved medications for treatment of patients with overweight and/or obesity;[3] now, therefore be it:

RESOLVED**,** that the American Osteopathic Association (AOA) recognize obesity as a complex, multifactorial disease, an interaction between genotype and environment, which has socioeconomic, behavioral, cultural, physiological, metabolic, and genetic factors; and be it further

RESOLVED, that the AOA advocate for payment ~~for medical services and procedures~~ **OF MEDICAL SERVICES, PROCEDURES, AND FDA-APPROVED MEDICATIONS** used to treat and manage patient's weight with or without associated weight related conditions; and be it further

RESOLVED, that the AOA advocate for insurance coverage of FDA approved medications used to treat patients with overweight and/or obesity~~; and be it further~~

~~RESOLVED, that this resolution be sent to the AOA for consideration by the 2025 AOA House of Delegates.~~

SUBJECT: AGAINST THE USE OF FOOD DYES AND PRESERVATIVES

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS**,** synthetic food dyes such as Red 40, Yellow 5, and Blue 1 are widely used in food products despite studies linking them to hyperactivity, allergic reactions, and potential carcinogenic effects; and

WHEREAS**,** research published in the *International Journal of Occupational Medicine and Environmental Health* has associated prolonged exposure to artificial food dyes with increased oxidative stress and DNA damage (1); and

WHEREAS**,** preservatives such as sodium benzoate, butylated hydroxyanisole (BHA), and butylated hydroxytoluene (BHT) have been shown to disrupt endocrine function and increase the risk of chronic illnesses, including cancer and metabolic disorders; (2, 3) and

WHEREAS, the European Union has placed restrictions or labeling requirements on certain food dyes and preservatives due to health concerns, providing a regulatory model that prioritizes consumer safety (4); and

WHEREAS**,** educating patients and advocating for stricter regulations can help reduce exposure to potentially harmful additives, thereby improving public health; and, now therefore be it:

RESOLVED**,** the American Osteopathic Association (AOA) opposes the use in food products of synthetic dyes and preservatives that have known harmful effects and advocates for increased research and regulation on their safety; and be it further

RESOLVED**,** that a copy of this resolution be submitted to the AOA for consideration at the 2025 AOA House of Delegates.

SUBJECT: **ACCESS TO MENSTRUAL HEALTH PRODUCTS**~~RECOGNIZING PERIOD POVERTY AS A POLICY CONCERN~~

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, "Period poverty" is defined as a lack of access to and an inability to afford menstrual hygiene products (MHPs)[1] often leading to physical, mental, emotional, and social challenges[2]; and

WHEREAS, 16.9 million individuals who menstruate in the United States live in poverty[2]; and

WHEREAS**,** lack of access and ability to afford menstrual products leads to harmful menstrual hygiene practices such as using non-sanitary menstrual product alternatives, using ill-fitting products, and wearing products for longer than safely intended, leading to the potential for development of infection of chafed skin, toxic shock syndrome, and disrupted vaginal flora[3]; and

WHEREAS, the average menstruating American spends $18,000 across their menstruating lifetime on MHPs[4], with that estimate likely being higher in individuals who experience menorrhagia (heavy menstrual bleeding); and

~~WHEREAS, 40% of Americans have admitted to struggling at one point in their life to afford MHPs[5]; and~~

WHEREAS, policy and advocacy addressing period poverty, in public schools has been shown to have positive effects on education, such as on test scores and attendance rates [6]; and

WHEREAS, efforts by states to remove the sales tax from MHPs has been shown to improve access to these items[7,8,9]; and

WHEREAS, the American Osteopathic Association (AOA) is dedicated to protecting patient access to care through federal, state, and profession wide advocacy[10]; now, therefore be it

RESOLVED, ~~that the American Osteopathic Association (AOA) supports local, state, and federal efforts that promote menstrual health equity.~~**THAT THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) SUPPORTS EFFORTS ON LOCAL, STATE, AND NATIONAL LEVELS TO EXPAND ACCESS TO AFFORDABLE OR FREE MENSTRUAL HYGIENE PRODUCTS FOR INDIVIDUALS EXPERIENCING PERIOD POVERTY,**

SUPPORTS THE REMOVAL OF SALES TAX ON MENSTRUAL PRODUCTS, ENCOURAGES PUBLIC HEALTH EDUCATION ON SAFE MENSTRUAL HYGIENE PRACTICES, AND ENCOURAGES MEMBERS AND PARTNER ORGANIZATIONS TO COLLABORATE WITH COMMUNITY ORGANIZATIONS AND EDUCATIONAL INSTITUTIONS TO REDUCE THE COMMUNITY ORGANIZATIONS AND EDUCATIONAL INSTITUTIONS TO REDUCE THE COMMUNITY ORGANIZATIONS AND EDUCATIONAL INSTITUTIONS TO REDUCE THE STIGMA AROUND PERIOD POVERTY TO IMPROVE MENSTRUAL HEALTH OUTCOMES.

SUBJECT: SHARING CENTRALIZED RESOURCES ON STATE-SPECIFIC REPRODUCTIVE HEALTH POLICIES

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, federal changes limiting access to reproductive health information on federal health websites have left physicians and patients unaware of reproductive rights on a national scale[1]; and

WHEREAS, variations in access to comprehensive reproductive health care exist across states and are constantly changing; for example, Mississippi prohibits pregnancy termination once a fetal heartbeat is detected and Alabama criminalizes pregnancy termination unless the mother's life is threatened-highlighting the need for centralized guidance[2]; and

WHEREAS, the lack of clarity and uncertain enforcement of state reproductive health laws by regulatory agencies creates a challenging landscape for physicians to navigate[3]; and

WHEREAS, without clear guidance from the profession, physicians practicing in states with restrictive reproductive health laws are hesitant to refer patients out of state for legal pregnancy termination or provide patients with online resources about pregnancy termination - that not only impacts patient access to reliable health information and care, but it also negatively affects the patient-physician relationship [4,5]; and

WHEREAS, tools, such as the Guttmacher Interactive Map[7] and the Kaiser Family Foundation's State Profiles for Women's Health[8], showing reproductive health care access across various states are available but should be shared within medical communities to raise awareness and provide centralized access to reliable, evidence-based information; and

WHEREAS, the American Osteopathic Association (AOA) is committed to protecting the sanctity of the patient-physician relationship from interference laws[9,10] and recognizes the importance of having access to federal health data and guidance[11]; and now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) **MAKES AVAILABLE EXISTING** ~~shares~~ evidence-based, validated tools **WITHIN THE OSTEOPATHIC PHYSICIAN COMMUNITY** to improve physician access to **ACCURATE** reproductive health information.

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed
3 the policy, now therefore be it

4 RESOLVED, that the Bureau of Osteopathic Research and Public Health
5 recommends that the following policy be REAFFIRMED.

6 The American Osteopathic Association (AOA) discourages the placement of
7 medical practices and limited service clinics in retail settings that promote and sell
8 tobacco because it is contrary to the efforts and standards of the health care
9 community at large.

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

RESEARCHING PATIENT SAFETY AND PROVIDER QUALIFICATIONS

REVIEW OF RESEARCH

A REVIEW OF THE LITERATURE INDICATES VERY LITTLE RESEARCH INTO THE LACK OF QUALIFICATIONS OF NURSE PRACTITIONERS (NPS) AND PHYSICIAN ASSISTANTS (PAS) TO INDEPENDENTLY PROVIDE MEDICAL CARE. A 2022 AMERICAN MEDICAL ASSOCIATION (AMA) ISSUE BRIEF, ENTITLED *SUMMARY OF EXISTING STUDIES: SCOPE OF PRACTICE*, PROVIDES A SUMMARY OF 15 RESEARCH PROJECTS ON TOPICS INCLUDING COST AND QUALITY OF CARE, EDUCATION AND TRAINING, AND WORKFORCE STUDIES.[1]

IN JULY 2024, AN ARTICLE PUBLISHED BY BLOOMBERG NEWS, ENTITLED *THE MISEDUCATION OF AMERICA'S NURSE PRACTITIONERS*, ANALYZED THE SHORTCOMINGS IN NURSE PRACTITIONER EDUCATION AND TRAINING AND ITS IMPACT ON PATIENT CARE.[2]

THERE ARE MANY CHALLENGES TO CONDUCTING THE RESEARCH CALLED FOR IN THE RESOLUTION. THESE INCLUDE LACK OF FUNDING FOR COMPREHENSIVE LONGITUDINAL RESEARCH INTO NP AND PA OUTCOMES AND COST DATA. OTHER CHALLENGES INCLUDE LACK OF ACCESS TO MALPRACTICE CLAIMS DATA AND THE IMPRACTICALITY OF IDENTIFYING NPS AND PAS WHO MAY HAVE MISSED OR MISDIAGNOSED A PATIENT WHO LATER ENDS UP BEING SEEN BY A PHYSICIAN ONCE THEIR CONDITION WORSENS.

SCOPE OF PRACTICE

SCOPE OF PRACTICE IS AN AOA PRIORITY ISSUE, AND THE PUBLIC POLICY DEPARTMENT ACTIVELY ADVOCATES AGAINST INAPPROPRIATE SCOPE EXPANSION ATTEMPTS BY NON-PHYSICIAN CLINICIANS. INFORMATION REGARDING THE AOA'S ADVOCACY EFFORTS ON ALL PRIORITY ISSUES – INCLUDING SCOPE OF PRACTICE – IS PROVIDED TO PHYSICIANS VIA THE FOLLOWING COMMUNICATION CHANNELS:

- **THE OSTEOPATHIC ADVOCACY NETWORK**
- **THE DO ENGAGE**
- **THE AOA DOCUMENT REPOSITORY (CONTAINS ALL LETTERS WRITTEN ON PRIORITY ISSUES, SEARCHABLE BY KEYWORD)**
- **QUORUM SOFTWARE FOR REAL-TIME TRACKING OF PUBLIC POLICY ACTIVITY ON VARIOUS ISSUES**

SHOULD ADDITIONAL RESEARCH INTO NP AND PA COST AND QUALITY OUTCOMES BECOME AVAILABLE, STAFF WILL INVESTIGATE THE PROPER COMMUNICATIONS CHANNELS THROUGH WHICH TO DISSEMINATE IT.

AOA POLICY STATEMENT

The American Osteopathic Association (AOA) encourages independent research on the qualification**S** and outcomes of nurse practitioners, **PHYSICIAN ASSISTANTS**, and other midlevel providers that practice independently~~; and that the AOA research & public health staff perform an analysis of current, valid and published research~~ **FOCUSING SPECIFICALLY** on clinical outcomes, resource utilization and malpractice experience for independently practicing NPs and PAs, ~~**PROVIDING THIS INFORMATION**~~ **AND SHARE AS IT BECOMES AVAILABLE THROUGH OSTEOPATHIC ADVOCACY NETWORK COMMUNICATION CHANNELS OR OTHER VENUES, AS APPROPRIATE**. ~~and provide this information to osteopathic physicians.~~

SUBJECT: PRIOR AUTHORIZATION – SOURCE: H642-A/20

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and determined that it remains relevant; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED AS AMENDED

The American Osteopathic Association (AOA) adopts the following policy and principles statement on prior authorization.

Prior authorization requirements have been found to result in care delays that place patients at risk and to increase provider burden. ~~In order to~~ **TO** ensure that prior authorization is implemented in an appropriate manner that minimizes burden and risk, the AOA believes that implementation of ~~PA~~ **PRIOR AUTHORIZATION** by ~~payers~~ **PAYORS** and pharmacy benefit managers should abide by the following principles:

- Prior authorizations should be clinically relevant, evidence-based, transparent, and as minimally intrusive on the physician, medical staff, and patient as possible.

- Prior authorization programs that negatively impact access to care, delay treatment, result in abandonment, increase cost of care and administrative costs, do not align with recognized clinical practice guidelines, or have a negative impact on quality of care or outcomes should be discontinued.

- Payors should appropriately compensate providers for complying with utilization review.

- Prior authorization request forms should be standardized and electronic whenever feasible to promote procedural uniformity and reduce administrative burden.

- ~~Allow continuation of~~ **PATIENTS SHOULD BE ALLOWED TO CONTINUE ON** medications already being administered or prescribed when ~~a patient~~ **THEY** change~~s~~ health plans**,** and ~~not allow~~ **PLANS SHOULD BE PROHIBITED FROM MAKING** changes without ~~discussion and~~ approval of the ordering ~~physician~~**PRESCRIBER**.

- Providers should be notified of changes to prior authorization requirements at least 45 days prior to change.

- Payors and Plans should be required to report a list of services and prescription medications subject to prior authorization and corresponding denial, delay, and approval rates.

- Prior authorization requirements should be minimized as much as possible and eliminate the application of prior authorization to services and prescription medications that are routinely approved

- **PLANS SHOULD NOT USE AUGMENTED/ARTIFICIAL INTELLIGENCE (AI) TO AUTOMATICALLY DENY PRIOR AUTHORIZATION REQUESTS, AND ALL DENIALS SHOULD BE REVIEWED BY A LICENSED PHYSICIAN IN A SPECIALTY RELEVANT TO THE SERVICE BEING REQUESTED.**

- There should be an easily accessible and responsive direct communication tool to resolve conflicts between health plans and ordering physicians

As part of its efforts to advocate for these principles and ensure their incorporation into policy, the AOA will advocate for legislation and regulatory changes that would require payers and pharmacy benefit managers to:

- **ELIMINATE PLAN USE OF LOW-VALUE PRIOR AUTHORIZATION REQUIREMENTS, WHERE PLANS IMPOSE REQUIREMENTS FOR SERVICES ROUTINELY APPROVED OR OF LIMITED VALUE TO IMPROVING CARE.**

- Disclose in sales, promotional materials and advertising that their products utilize a prior authorization process which may result in a delay in or denial of diagnosis and or treatment which may be detrimental to the patient's health or well-being

- ~~Consider a physician's attestation of clinical diagnosis or order sufficient documentation of medical necessity for durable medical equipment~~

- Include in contracts with ~~healthcare providers~~ **PHYSICIANS** hold harmless clauses that indemnify ~~healthcare providers~~ **PHYSICIANS** against financial loss due to injury to a patient as a result of the payor's failure or refusal to ~~grant a prior authorization request in a timely manner~~**MAKE A TIMELY DECISION**

- Provide appropriate **AND TIMELY** notice to patients and physicians when **BEFORE** formulary and benefit changes are made, **AND INCLUDE** ~~**PREFERRED**~~ **ALTERNATIVE OPTIONS** ~~**THAT MAY BE INDICATED**~~

- Include a correct phone number and web address on the patient identification card for initiating the prior authorization process; Make all forms used in the prior authorization process readily available to healthcare providers, including EMR templates

- Publish and make available to the public all **MEDICAL ITEMS, SERVICES, AND PRODUCTS WHICH WILL REQUIRE PRIOR AUTHORIZATION,** ~~requirements~~ **AND** for prior authorization and follow those published policies

- ~~**PUBLISH AND MAKE AVAILABLE TO THE PUBLIC**~~ **THE EVIDENCE AND CLINICAL GUIDELINES UPON WHICH COVERAGE CRITERIA ARE BASED**

- Provide sufficient knowledgeable staff to ensure that healthcare providers are able to contact medical claims payers and pharmacy benefit managers without average hold times exceeding 10 minutes

- Compensate medical practices and healthcare providers for the cost of time spent ~~on inappropriately denied PA~~ **PRIOR AUTHORIZATION** requests

- ~~To identify and hold accountable the payor's medical director/claim adjudicator for the results of their decisions~~ **TO HOLD PAYORS ACCOUNTABLE FOR FOLLOWING THEIR PUBLISHED POLICIES AND FOR THE RESULTS OR THOSE DECISIONS.**

SUBJECT: ~~Interoperability of~~ Health Information Technology **AND CLINICAL SOFTWARE: INTEROPERABILITY, SAFETY, AND RELIABILITY** – SOURCE: H605-A/20

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy; and determined that it remains relevant; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED AS AMENDED

The American Osteopathic Association (AOA) supports **A REGULATORY FRAMEWORK FOR HEALTH INFORMATION TECHNOLOGY AND RELATED CLINICAL SOFTWARE THAT APPROPRIATELY BALANCES PATIENT SAFETY, DATA PRIVACY AND SECURITY, USABILITY, AND INNOVATION. AOA SUPPORTS** a ~~new~~ risk-based oversight framework for clinical software, developed through a multi-stakeholder consensus-based process. The framework should take into account risk relative to intended use, cost/benefit of proposed oversight, and the principle of shared responsibility. **POLICY REGARDING PRODUCT APPROVAL OR CERTIFICATION SHOULD EMPHASIZE PATIENT OUTCOMES AND SAFETY; DELIVERY OF PATIENT-CENTERED, WHOLE-PERSON CARE; AND USABILITY OF PRODUCTS BY PHYSICIANS TO ALLEVIATE BURDENS OF SUCH USE.** ~~Patient safety and appropriate improvements in quality, effectiveness, and efficiency of care delivery should be paramount. This framework should not conflict with or duplicate the medical device regulation framework. The AOA does not support data be treated as a medical device, regardless of the category of health it associated with the data. The AOA supports a national network for reporting patient safety events and other information vital to public health, where data can be accessed, analyzed, and communicated in a timely manner. The regulatory framework~~ **FEDERAL POLICIES** should promote interoperability, in order for clinical information systems to capture and share quality, outcome, cost, and **INDIVIDUAL** patient ~~healthcare~~ data. ~~To support coordinated health care and data analytics to promote transition to a value-based healthcare system.~~ **INTEROPERABILITY IS ESSENTIAL TO COORDINATED CARE AND IMPROVED OUTCOMES NATIONWIDE.** The AOA ~~supports~~ **WILL CONTINUE TO ADVOCATE FOR** a common data structure that will enable interoperability; ~~setting a clear course of action,~~ federal support for an exchange infrastructure; **A NATIONAL NETWORK FOR REPORTING PATIENT SAFETY EVENTS AND OTHER INFORMATION VITAL TO PUBLIC HEALTH**; and standards which will make it easier to share information so physicians and patients

can make informed decisions. **THE AOA OPPOSES VENDORS, PROVIDER ENTITIES, AND OTHER HEALTHCARE ORGANIZATIONS BLOCKING HEALTHCARE PROFESSIONALS' ABILITY TO ACCESS, VIEW, SHARE, OR TRANSFER DATA.**

The AOA will encourage public and private sector stakeholders to develop ~~clinically driven, standardized~~ products that are interoperable by design, do not require costly and time-consuming customization, and for which any upgrades or future needs can be integrated seamlessly without burdensome costs or system modifications. The AOA also supports ~~standardization of prior authorization attachments~~ **A STANDARDIZED ELECTRONIC PRIOR AUTHORIZATION PROCESS** to alleviate burden and reduce delays to care.

~~The AOA opposes vendors blocking health care professionals' ability to access, view, share, or transfer data.~~

~~The AOA supports policies and technologies that facilitate person-centered health care.~~

The AOA will remain vigilant about mitigating the level of administrative burden posed by existing and new government policies.

SUBJECT: NON-PHYSICIAN CLINICIANS - SOURCE: H640-A/20

SUBMITTED BY: Council on State Health Affairs

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant; now, therefore be it

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED.

The American Osteopathic Association (AOA) has adopted the attached policy paper as its position on non-physician clinicians including appropriate onsite supervision.

Over the course of the past century, scientific and technological advancements have led to improvements in the treatment of disease and standards of patient care. As a result, the standardized medical education, supervised postgraduate ("residency") training and examination series that physicians in the United States are required to complete in order to obtain an unlimited medical license has increased as well. At the same time, however, some states are creating legislative pathways to independent medical practice for other types of clinicians, despite the absence of nationally standardized education, training and testing pathways for these clinician groups, or evidence regarding patient safety outcomes.

The current DO/MD medical model, in which medical students and resident physicians are required to demonstrate their ability to safely provide care to patients under the supervision of fully licensed physicians, leading to greater autonomy over time, has proven its ability to provide physicians with the complete knowledge and skill base needed to ensure patient safety and optimize outcomes. in addition, most states impose additional continuing medical education (CME) requirements, and many physicians elect to undergo rigorous certifying board examinations to demonstrate excellence in a particular specialty, which helps to ensure that physicians remain trained to provide the current highest standard of patient care over the course of their careers.

Thus, it is appropriate that the practice of medicine and the quality of medical care remain the responsibility of physicians, who are the only clinician group properly trained, licensed and regulated according to uniform laws governing medical licensure in the United States. The American Osteopathic Association (AOA) values the unique training and contributions of all members of the patient care team and

supports the concept of uniform licensure pathways for all clinician groups, based upon scope of practice. The AOA further supports appropriate physician involvement in patient care provided by non-physician clinicians, and opposes any legislation or regulations which would authorize the independent practice of medicine by an individual who has not completed the state's requirements for physician licensure.

As non-physician clinicians continue to seek wider roles, public policy dictates that patient safety and proper patient care should be foremost in mind when the issues encompassing expanded practice rights for non-physician clinicians – autonomy, scopes of practice, prescriptive rights, liability and reimbursement, among others – are addressed.

A. Patient Safety. The AOA supports the "team" approach to medical care, with the physician as the leader of that team. The AOA further supports the position that patients should be made clearly aware at all times whether they are being treated by a non-physician clinician or a physician. The AOA recognizes the growth of non-physician clinicians and supports their rights to practice with appropriate physician involvement within the scope of relevant state statutes.

B. Independent Practice. It is the AOA's position that roles within the "team" framework must be clearly defined, through established state-level supervisory protocols and signed agreements, so physician involvement in patient care is sought when a patient's case dictates and patients can rest assured that physician involvement in their care will remain the same regardless of practice setting within the state. Further, all non-physician clinicians must refer a patient to a physician when the patient's condition is beyond the non-physician clinician's scope of education, training or expertise.

C. Liability. The AOA endorses the view that physician liability for non-physician clinician actions should be reflective of the quality and degree of supervision being provided and should not exonerate the non-physician clinician from liability. It is the AOA's position that non-physician clinicians providing care in independent practice states should be regulated and disciplined by the entities responsible for regulating and disciplining physicians (i.e. state medical boards), to ensure that all clinicians who are independently practicing medicine are held to the same standard of care and the equivalent degree of liability. To that end, the AOA also believes that non-physician clinicians should be required to obtain equivalent malpractice insurance to physicians in states that currently require physicians to possess malpractice insurance.

WHEREAS, the Bureau on Federal Health Programs has reviewed and amended the referred policy; and

WHEREAS, the Board of Trustees approved the amended referred policy (as currently presented to the 2025 House of Delegates), H633-A/2024 AOA OMT Coverage Determination Guidance, as an adopted policy until it can be ratified by the House of Delegates in 2025; therefore, be it

RESOLVED, that the Bureau on Federal Health Programs and the Board of Trustees recommends that the referred policy be REAFFIRMED as AMENDED .

The American Osteopathic Association (AOA) supports the ability for physicians to bill for Osteopathic Manipulative Treatment (OMT) when performed as a separately identifiable procedure on the same date as an evaluation and management (E/M) service when the services are medically necessary and are supported with appropriate documentation according to the E/M Documentation Guidelines. The AOA will work with all payers to ensure that policies continue to support appropriate payment for OMT when billed with an E/M service. Additionally, the AOA will engage with private payers to ensure that their coverage policies are consistent with current medical practice, to address inappropriate claims denials, and to address blanket denials for services billed with a modifier 25.

The AOA approves the position paper below for OMT coverage and encourages all public and private payers to refer to AOA's policy when developing new policy or revising existing guidance for OMT coverage. The position paper is intended for use in educational efforts on proper documentation, billing, and payment for OMT; discusses best practices; and acknowledges that documentation by physicians may vary based on individual needs and circumstances that should not serve as a basis for payment denials when services are medically necessary.

American Osteopathic Association (AOA) Position Paper on Osteopathic Manipulative Treatment

Osteopathic manipulative treatment (OMT) is an essential treatment tool used by physicians for a broad range of conditions, and particularly for treating somatic dysfunction. OMT should be appropriately paid for when it is medically necessary, and documentation of the service is accurate. This document provides guidance to physicians and payers on the following:

- The physicians qualified to provide OMT;
- When payment for OMT services is appropriate;
- Proper documentation and coding of OMT services, including when the service is billed on the same date as an evaluation and management (E/M) service; and
- Appropriate reporting of E/M services in conjunction with OMT.

Physicians are encouraged to use these guidelines to inform best practices for billing, coding, and documentation. Payers should also consider these guidelines in development of coverage policy and should not inappropriately limit payment for medically necessary OMT services.

Introduction to OMT

OMT is a distinct medical procedure used by physicians (DOs/MDs) to treat somatic dysfunction and other conditions. The American Association of Colleges of Osteopathic Medicine (AACOM) Glossary of Osteopathic Terminology defines OMT as the therapeutic application of manually guided forces by a physician to improve physiologic function and/or support homeostasis that has been altered by somatic dysfunction. The AACOM glossary further elaborates on the definition, stating:

Impaired or altered function of related components of the somatic (body framework) system: skeletal, arthrodial and myofascial structures, and their related vascular, lymphatic, and neural elements. Somatic dysfunction is treatable using osteopathic manipulative treatment. The positional and motion aspects of somatic dysfunction are best described using at least one of three parameters: (1) the position of a body part as determined by palpation and referenced to its adjacent defined structure, (2) the directions in which motion is freer, and (3) the directions in which motion is restricted.[1]

Somatic dysfunction in one region may lead to compensatory somatic dysfunction in other regions.

Osteopathic manipulative treatment can also be used to treat the somatic component of visceral disease and any organ system, which has the potential to manifest as changes in the skeletal, arthrodial, and myofascial tissues (e.g. tight right shoulder muscles in a patient with gallbladder disease). Normalizing musculoskeletal activity (relaxing tense muscles, etc.) can normalize outflows through sympathetic or parasympathetic autonomic nervous systems to visceral systems, resulting in more normal visceral and organ system function. Somatic

[1] The American Association of Colleges of Osteopathic Medicine (AACOM) **EDUCATIONAL COUNCIL ON OSTEOPATHIC PRINCIPLES (ECOP) GLOSSARY OF OSTEOPATHIC TERMINOLOGY, 3RD EDITION, 2017**. ~~November 2011.~~

dysfunction is identified on the physical exam by one or more of the following elements: **T**issue texture changes, positional **A**symmetry, **R**ange of motion alterations, or changes in palpatory sensitivity, e.g., **T**enderness (TART).

Provider Types Qualified to Perform OMT

To perform OMT, a qualified Doctor of Osteopathic Medicine must have graduated from an accredited school of osteopathic medicine, or a medical doctor must have **GRADUATED FROM AN ACCREDITED ALLOPATHIC SCHOOL OF MEDICINE AND HAVE** trained in ~~a postgraduate osteopathic training program that encompasses~~ osteopathic principles and practices, including hands-on demonstration and competency testing in OMT.

OMT Payment:

The decision to utilize OMT as part of the overall health care of patients is made on a visit-by-visit basis. As such, it is typical to perform a history and physical examination on initial and subsequent encounters. Based on the history and findings of the physical examination, the physician may decide to use OMT as part of the overall care of the patient.

OMT is a paid service when somatic dysfunction is documented in the history and/or the physical examination. OMT is not paid when somatic dysfunction is absent from the patient's history or physical examination documentation. The method of OMT employed by the physician is determined by the patient's condition, age, and the effectiveness of previous methods of treatment. Because OMT is a procedure that is separate from the evaluation and management (E/M) service, both services should be payable when rendered on the same day assuming that somatic dysfunction is identified, documentation is appropriate, and that the E/M service is above and beyond the services covered in the OMT and is documented accordingly. Payers should not deny claims on the sole basis that the E/M service is billed with modifier 25 when a procedure was performed on the same date.

OMT Documentation

The medical record documentation must support the level of E/M service billed and include the somatic dysfunction that the physician observed in the body regions treated with OMT. If an E/M service is being reported on the same day as OMT, the documentation should clearly distinguish the elements that constitute the E/M service and the OMT service. Following current E/M coding guidelines, the level of E/M service selected may be based on the total time spent on the E/M portion of the encounter or medical decision making (MDM). Documentation should be consistent with Current Procedural Terminology (CPT©) guidelines to support level selection. The documentation should clearly identify the body regions affected and treated with OMT to support the procedure code(s) reported.

~~The selection of body region(s) to which OMT is applied should reflect the region(s) of documented somatic dysfunction. There may be instances when multiple regions are treated due to the occurrence of compensatory changes. When this occurs, the documentation should describe the compensatory changes and the rationale for treating these areas, especially if the patient has no complaints related to these areas. Treatment should be directed to the areas of documented somatic dysfunction and should not be aimed at areas unrelated to the diagnosis.~~ **THE BODY REGION(S) TO WHICH OMT IS APPLIED MUST BE REFLECTED WITHIN DOCUMENTATION OF SOMATIC DYSFUNCTION. THERE MAY BE INSTANCES WHEN MULTIPLE REGIONS ARE TREATED WHEN THE PATIENT HAS NO COMPLAINTS RELATED TO THESE AREAS. IF THERE IS AN INTERRELATIONSHIP SUCH AS A DISTANT MECHANICAL INFLUENCE OF THE OCCURRENCE OF COMPENSATORY CHANGES, IT IS BEST TO DESCRIBE THOSE WHEN POSSIBLE. TREATMENT SHOULD GENERALLY NOT BE DIRECTED TO AREAS OF DYSFUNCTION UNRELATED TO THE DIAGNOSIS THAT HAVE NO INFLUENCING NATURE.** The type, frequency, and duration of OMT should be consistent with current standards of medical practice.

Factors that may affect frequency and duration of treatment are severity of illness, duration or chronicity of the patient's condition, and the presence of co-morbidities. These factors should be reflected in the medical record if they contribute to the physician's treatment approach.

Overall, the American Osteopathic Association recommends that the E/M and OMT portions of the visit be distinctly documented and detail the regions treated, the techniques utilized, ~~and when appropriate, a description of how the patient tolerated the treatment.~~ **A DESCRIPTION OF HOW THE PATIENT TOLERATED THE TREATMENT, AND INCLUDE OTHER DETAILS CONSISTENT WITH TYPICAL PROCEDURE DOCUMENTATION.**

<u>OMT Coding</u>

In April 2010, the American Medical Association (AMA) Relative Value Update Committee (RUC) requested that the AOA survey the existing OMT codes to develop accurate and unbiased information for the relative value of the physician work involved in performing OMT as part of the Centers for Medicaid and Medicare Services (CMS) five-year review of the resource based relative value scale (RBRVS).

The survey process required the creation of vignettes to describe the typical patient for OMT CPT® Codes 98925-98929. Additionally, the description of the preservice, intraservice, and postservice work for OMT was included. As of January 2012, the vignettes for the typical patient and the preservice, intraservice and postservice descriptors are contained within the RUC database.

There are five OMT Service CPT© Codes (98925-98929), each corresponding to the number of body regions treated with OMT. Descriptors for each code are the following:

- 98925 *Osteopathic manipulative treatment (OMT); 1-2 body regions involved*
- 98926 *Osteopathic manipulative treatment (OMT); 3-4 body regions involved*
- 98927 *Osteopathic manipulative treatment (OMT); 5-6 body regions involved*
- 98928 *Osteopathic manipulative treatment (OMT); 7-8 body regions involved*
- 98929 *Osteopathic manipulative treatment (OMT); 9-10 body regions involved*

Vignettes and work descriptors for each OMT code can be found in Appendix C of this document. Note: The OMT service codes do not include any elements of the history, examination, and medical decision making.

<u>Reporting E/M Services:</u>

It is appropriate for an E/M service to be performed on initial visits where OMT may be performed, and on subsequent patient encounters if a new problem occurs or if original symptoms have changed. An appropriate significant, separately identifiable E/M service, documented according to the E/M guidelines, may be provided and reported so long as it is considered medically necessary and goes above and beyond the work associated with the OMT procedure itself. As patients may not present for the explicit purpose of undergoing an OMT procedure, the E/M service helps a physician determine if OMT needs to be provided and, if so, what body region(s) to treat and what technique(s) to employ.

A physician should select the appropriate E/M based on MDM or total time of the E/M portion of the encounter, and they should make sure to document a medically appropriate history and/or examination. According to CPT guidelines, four types of MDM are recognized, which include straightforward, low, moderate, and high. MDM “includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option” and is defined by three key elements:

- Number and complexity of the problem(s) addressed during the encounter;
- The amount and/or complexity of data to be reviewed or analyzed; and
- The risk of complications and/or morbidity or mortality of patient management.

Total time may be used alone to select the appropriate code level for E/M services. Time consists of the cumulative amount of face-to-face and non-face-to-face time **personally** spent by the physician in care of the patient on the date of the encounter. Total time can include the following activities when performed:

- preparing to see the patient (e.g., review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record

- independently interpreting results (not separately reported) and communicating results to the patient/ family/caregiver
- care coordination (not separately reported)

Physicians should follow the most recent CPT guidance on E/M services whenever billing these services. Documentation for both the E/M and OMT service must be complete when the services are billed on the same day.[2]
If utilizing an electronic health record (EHR), ensure that it is capable of capturing all of the history, physical examination and medical decision making and any other service(s) provided on each patient visit.
Per CPT © guidance, Evaluation and Management services may be reported separately using Modifier- 25 if the patient's condition requires a significant, separately identifiable E/M service above and beyond the usual preservice and postservice work associated with the OMT procedure. The E/M service may be caused or prompted by the same symptoms or condition for which the OMT service was provided. As such, different diagnoses are not required for reporting of the OMT and E/M service on the same date. Documentation of any changes to symptoms from original visit are vital to the medical necessity of the E/M service.

Documenting the Patient Visit: SOAP Note Example[3]:

Below is an example of a patient encounter and a subjective, objective, assessment, and plan (SOAP) note for each to illustrate how to document the patient's visit in the medical record. Other styles and preferences exist for medical record documentation. **Note: The E/M service should be a separately identifiable service above and beyond what is normally included in the osteopathic procedure note. If somatic dysfunction is identified in exam and OMT is recommended documentation should include a procedure note. The procedure note should be a separate note following the SOAP note**.

E/M visit level can be determined based on either medical decision making (MDM) or total time.

SOAP Note – Patient Example

S. A 20-year-old African American male complains of low back pain that began three days ago after he lifted a heavy object. Cannot straighten up when walking, pain with change of position. The patient denies radiation of pain and areas of numbness, the pain stays along the back and waist. He is comfortable when lying down, aspirin helps some, has used heat with some help. Has prior history of back pain as a child. Reviewed records provided. Symptoms resolved after undergoing physical therapy. Denies allergies, surgical history is unremarkable.
O. FLEXION POSTURE WHEN STANDING. INABILITY TO EXTEND LUMBAR SPINE ON ACTIVE AND PASSIVE RANGE OF MOTION. TENDERNESS NOTED

[2] American Medical Association. CPT Evaluation and Management (E/M) Code and Guideline Changes. Effective January 1, 2023. Available here.
[3]American Osteopathic Association. "Guide to Coding and Documentation: Osteopathic Manipulative Treatment, First Edition." 2017

OVER LUMBAR AND SACRAL REGIONS. MUSCLE SPASMS NOTED OF BILATERAL PARASPINAL MUSCULATURE OF THE LUMBAR SPINE. L2 FRRSR. L/R BACKWARD SACRAL TORSION. NEUROLOGIC EXAM WITHIN NORMAL LIMITS. MUSCULOSKELETAL STRENGTH OF BILATERAL LOWER EXTREMITIES EQUAL AND WITHIN NORMAL LIMITS. ~~Tenderness noted over lumbar and sacral regions. Inability to extend lumbar spine when standing. Flexion posture when standing. Muscle spasms noted in paraspinals of the lumbar region. Decreased range of motion of lumbar spine and sacrum was noted on active and passive motion testing. Neurologic exam normal.~~

A. The patient is diagnosed with lumbosacral sprain/strain, likely due to lifting a heavy object. Patient has moderate pain intensity with associated activity limitations.

Lumbosacral sprain/strain S33.8XXA

Note: Based on feedback from insurers and physicians who have completed appeals processes, the AOA encourages inclusion of a narrative of considerations and judgements synthesizing their clinical findings into a clear understanding of the presenting condition and treatment strategies.

P. 1. OMT recommended for the somatic dysfunction of lumbar and sacral regions as noted
2. Continue aspirin
3. No lifting, bending, or twisting
4. Contact office if symptoms worsen

OMT Procedure Note- Patient Example

Patient decided to proceed with OMT recommended. Verbal consent obtained. Discussed risks, benefits, and potential treatment reaction with patient and patient acknowledged comprehension. Patient put in position and technique used to treat the sacral and lumbar spine regions — hypertonic paraspinal muscles and sacral spine- piriformis muscles S2-S4.

Patient tolerated procedure well. Improved Range of Motion noted along with a decreased severity of pain.

Patient instructed to drink fluids today following procedure. Discouraged bedrest and encouraged movement. Contact office if pain increases.

CODING FOR THIS CASE

Evaluation and Management: new patient/established patient 99203/99213 (with modifier 25) **ATTACHING S33.8XXA**
OMT two body regions: lumbar/sacral 98925 **ATTACHING ICD-10 CODE M99.03 AND M99.04**

Conclusion:

OMT is a procedure that is separate from the evaluation and management service, both services should be payable when rendered on the same day considering that somatic

dysfunction is observed and both services are appropriately documented. Physicians should follow the above guidance to ensure that their documentation is appropriate. However, physicians have varying approaches to documentation, and payment should not be denied as long as the E/M service is a significant, separately identifiable service above and beyond the usual preservice and postservice work associated with the OMT procedure. Payers should also consider the above guidelines in developing coverage policies to ensure they are not inappropriately denying medically necessary services.

Appendices

Appendix A: OMT Coding Information

CPT/HCPCS Codes

98925 Osteopathic Manipulative Treatment (OMT); 1-2 Body Regions Involved
98926 Osteopathic Manipulative Treatment (OMT); 3-4 Body Regions Involved
98927 Osteopathic Manipulative Treatment (OMT); 5-6 Body Regions Involved
98928 Osteopathic Manipulative Treatment (OMT); 7-8 Body Regions Involved
98929 Osteopathic Manipulative Treatment (OMT); 9-10 Body Regions Involved

ICD-10 Diagnosis Codes

ICD-10 Codes:

M99.00	Segmental and somatic dysfunction of head region
M99.01	Segmental and somatic dysfunction of cervical region
M99.02	Segmental and somatic dysfunction of thoracic region
M99.03	Segmental and somatic dysfunction of lumbar region
M99.04	Segmental and somatic dysfunction of sacral region
M99.05	Segmental and somatic dysfunction of pelvic region
M99.06	Segmental and somatic dysfunction of lower extremity
M99.07	Segmental and somatic dysfunction of upper extremity
M99.08	Segmental and somatic dysfunction of rib cage
M99.09	Segmental and somatic dysfunction of abdomen and other regions

Appendix B: OMT Techniques are listed below (~~Please refer to~~ including, but not limited to those listed in the AACOM Glossary of OMT Terminology ~~for more information~~)

Active method
Articulatory method
Articulatory treatment
Articulatory (ART)
Balanced ligamentous tension (BLT)
Chapman reflex
Combined method
Combined treatment
Compression of the fourth ventricle (CV-4)
Counterstrain (CS)
Cranial Treatment (CR)
CV-4
Dalrymple treatment
Direct method
Exaggeration method
Exaggeration technique
Facilitated oscillatory release technique (FOR)
Facilitated positional release (FPR)
FASCIAL DISTORTION MODEL (FDM)
Fascial release treatment
Fascial unwinding
Functional method
Galbreath treatment
Hepatic pump
High velocity/low amplitude technique (HVLA)
Hoover technique
Indirect method (I/IND)
Inhibitory pressure technique
Integrated neuromusculoskeletal release
Jones technique
Ligamentous articular strain technique (LAS)
Liver pump
Lymphatic pump
Mandibular drainage technique
Mesenteric release technique
Muscle energy (**ME**)
Myofascial release (MFR) direct and indirect
Myofascial technique
Myotension
Osteopathic ~~in the Cranial Field (OCF)~~**CRANIAL MANIPULATIVE MEDICINE (OCMM)**
Passive method
Pedal pump
Percussion vibrator technique

394 Positional technique
395 Progressive inhibition of neuromuscular structure (PINS)
396 Range of motion technique
397 Soft tissue **(ST)** technique
398 Spencer technique
399 Splenic pump technique
400 Spontaneous release by positioning
401 Springing technique
402 Still technique
403 Strain-Counterstrain ® **(S/CS)**
404 Thoracic pump
405 Thrust technique (HVLA)
406 Toggle technique
407 Traction technique
408 V-spread
409 Ventral techniques
410
411
412 **Appendix C: OMT Vignettes and Coding for 98925-98929**
413
414 **OMT service code 98925:** Osteopathic manipulative treatment (OMT); one to two
415 body regions involved.
416
417 Vignette:
418 A 25-year-old female presents with right lower neck pain of two weeks duration.
419 Somatic dysfunction of cervical and thoracic regions is identified on examination.
420
421 Description of Preservice Work:
422 The physician determines which osteopathic techniques (e.g., HVLA, muscle
423 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
424 in what order the affected body regions need to be treated, and whether those
425 body regions should be treated with specific segmental or general technique
426 approaches. The physician explains the intended procedure to the patient, answers
427 any preliminary questions, and obtains verbal consent for the OMT. The patient is
428 placed in the appropriate position on the treatment table for the initial technique
429 and region(s) to be treated.
430
431 Description of Intraservice Work:
432 The patient is initially in the supine position on the treatment table. Motion
433 restrictions of C6 and C7 are isolated through palpation and treated using muscle
434 energy technique. Dysfunctions of T1 and T2 are treated using passive thrust
435 (HVLA) technique. Patient position is changed as necessary for treatment of the
436 individual somatic dysfunctions. Patient feedback and palpatory changes guide
437 further technique application as appropriate.
438
439
440

441 Description of Postservice Work:
442 Post-care instructions related to the procedure are given, including side effects,
443 treatment reactions, self-care, and follow-up. The procedure is documented in the
444 medical record.
445 **OMT Service code 98926:** Osteopathic manipulative treatment (OMT); 3-4 body
446 regions involved.
447
448 Vignette:
449 A 39-year-old female presents with right lower back pain of two weeks duration
450 after a lifting injury. Somatic dysfunction of lumbar, pelvis, and sacral regions are
451 identified on exam.
452
453 Description of Pre-Service Work:
454 The physician determines which osteopathic techniques (e.g., HVLA, Muscle
455 energy, Counterstrain, articulatory, etc.) would be most appropriate for this patient,
456 in what order the affected body regions need to be treated, and whether those
457 body regions should be treated with specific segmental or general technique
458 approaches. The physician explains the intended procedure to the patient, answers
459 any preliminary questions, and obtains verbal consent for the OMT. The patient is
460 placed in the appropriate position on the treatment table for the initial technique
461 and region(s) to be treated.
462
463 Description of Intra-Service Work:
464 The patient is initially in the prone position on the treatment table. Motion
465 restrictions of sacrum and pelvis are isolated through palpation and treated using
466 muscle energy and articulatory techniques. Dysfunctions of L1 and L5 are treated
467 using passive thrust (HVLA) technique. Patient position is changed as necessary
468 for treatment of the individual somatic dysfunctions. Patient feedback and
469 palpatory changes guide further technique application as appropriate.
470
471 Description of Post-Service Work:
472 Post-care instructions related to the procedure are given, including side effects,
473 treatment reactions, self-care, and follow-up. The procedure is documented in the
474 medical record.
475
476 **OMT service code 98927:** Osteopathic manipulative treatment (OMT); five to six
477 body regions involved.
478
479 Vignette:
480 A 17-year-old male presents with pain in the neck, upper and lower back, right
481 shoulder, and right chest following an injury in a high school football game two
482 days prior. Somatic dysfunctions of the right glenohumeral and acromioclavicular
483 joints, as well as the lower cervical, upper thoracic, right upper costal, and lumbar
484 areas are identified on exam.
485
486
487

488 Description of Preservice Work:
489 The physician determines which osteopathic techniques (e.g., HVLA, muscle
490 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
491 in what order the affected body regions need to be treated, and whether those
492 body regions should be treated with specific segmental or general technique
493 approaches. The physician explains the intended procedure to the patient, answers
494 any preliminary questions, and obtains verbal consent for the OMT. The patient is
495 placed in the appropriate position on the treatment table for the initial technique
496 and region(s) to be treated.
497
498 Description of Intraservice Work:
499 The patient is initially in a side-lying position on the treatment table. Motion
500 restrictions of identified joints are isolated through palpation and treated using a
501 variety of techniques as follows: acromioclavicular joint is treated with articulatory
502 technique; glenohumeral and costal dysfunctions are treated with muscle energy
503 technique; cervical spine is treated with counterstrain technique; and thoracic and
504 lumbar dysfunctions are treated with passive thrust (HVLA) technique. Patient
505 position is changed as necessary for treatment of the individual somatic
506 dysfunctions. Patient feedback and palpatory changes guide further technique
507 application as appropriate.
508
509 Description of Postservice Work:
510 Post-care instructions related to the procedure are given, including side effects,
511 treatment reactions, self-care, and follow-up. The procedure is documented in the
512 medical record.
513
514 **OMT service code 98928:** Osteopathic manipulative treatment (OMT); seven to
515 eight body regions involved.
516
517 Vignette:
518 A 64-year-old female, in rehabilitation following a left total knee replacement,
519 presents with swelling in the left lower leg, pain in her low back, hips and pelvis
520 with muscle spasms and numbness and bilateral wrist pain with use of a walker.
521 She has a history of widespread degenerative joint disease with stiffness and pain
522 making it difficult for her to actively participate in her rehabilitation program.
523 Somatic dysfunctions of the lumbar, thoracic, and cervical spine, sacrum, pelvis,
524 right leg, and bilateral wrist joints are identified on exam.
525
526 Description of Preservice Work:
527 The physician determines which osteopathic techniques (e.g., HVLA, muscle
528 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
529 in what order the affected body regions need to be treated, and whether those
530 body regions should be treated with specific segmental or general technique
531 approaches. The physician explains the intended procedure to the patient, answers
532 any preliminary questions, and obtains verbal consent for the OMT. The patient is
533 placed in the appropriate position on the treatment table for the initial technique
534 and region(s) to be treated.

535
536 Description of Intraservice Work:
537 The patient is initially in the supine position on the treatment table. Motion
538 restrictions of identified joints are isolated through palpation and treated using a
539 variety of techniques as follows: radiocarpal joints are treated using articulatory
540 and myofascial release techniques; dysfunctions of L3, L5 and SI joints are treated
541 using balanced ligamentous tension technique; dysfunction of C5 through T3, the
542 pelvis and lower extremity are treated with muscle energy technique. Lower
543 extremity edema is treated with lymphatic drainage techniques. Patient position is
544 changed as necessary for treatment of the individual somatic dysfunctions. Patient
545 feedback and palpatory changes guide further technique application as
546 appropriate.
547
548 Description of Postservice Work:
549 Post-care instructions related to the procedure are given, including side effects,
550 treatment reactions, self-care, and follow-up. The procedure is documented in the
551 medical record.
552
553 **OMT service code 98929:** Osteopathic manipulative treatment (OMT); nine to ten
554 body regions involved.
555
556 Vignette:
557 A 40-year-old male presents with sub-occipital headache, and pain in the neck,
558 upper and lower back, left shoulder and chest, and right ankle. He was involved in
559 a rear-end motor vehicle accident two weeks prior. X-rays in the emergency
560 department (ED) were negative. He has been taking prescribed analgesic and
561 muscle relaxant medications with minimal improvement. On examination, somatic
562 dysfunction is identified at the occipitoatlantal, left glenohumeral and right tibiotalar
563 joints, as well as the cervical, thoracic, costal, lumbar, sacral, and pelvic regions.
564
565 Description of Preservice Work:
566 The physician determines which osteopathic techniques (e.g., HVLA, muscle
567 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
568 in what order the affected body regions need to be treated, and whether those
569 body regions should be treated with specific segmental or general technique
570 approaches. The physician explains the intended procedure to the patient, answers
571 any preliminary questions, and obtains verbal consent for the OMT. The patient is
572 placed in the appropriate position on the treatment table for the initial technique
573 and region(s) to be treated.
574
575 Description of Intraservice Work:
576 The patient is initially in the supine position on the treatment table. Motion
577 restrictions of identified joints are isolated through palpation and treated using a
578 variety of techniques as follows: occipitoatlantal joint and sacrum are treated using
579 muscle energy and counterstrain techniques; right glenohumeral joint and pelvis
580 are treated with articulatory technique; lumbar, thoracic, cervical, and right ankle
581 are treated with passive thrust (HVLA) technique; costal dysfunctions are treated

582 using muscle energy technique. Patient position is changed as necessary for
583 treatment of the individual somatic dysfunctions. Patient feedback and palpatory
584 changes guide selection of further technique application as appropriate.
585
586 Description of Postservice Work:
587 Post-care instructions related to the procedure are given, including side effects,
588 treatment reactions, self-care, and follow-up. The procedure is documented in the
589 medical record.

This resolution is intended to supersede and replace current policy H635-A/20.

Background Information: Provided by AOA Staff
Current AOA Policy: H635-A/20 American Osteopathic Association (AOA) Osteopathic Manipulative Treatment (OMT) Coverage Determination Guidance

Explanatory Statement:
The following grid are the amendments submitted to the Ad Hoc Committee during the 2024 House of Delegates:

Amendment Offered By:	**Amendment**	**Ad Hoc Decision**
California – OPSC	**Line 73: Update Citation** The American Association of Colleges of Osteopathic Medicine (AACOM) - Educational Council on Osteopathic Principles (ECOP) Glossary of Osteopathic Terminology, 3rd edition, 2017.	**Approved**

California – OPSC	**Lines 298 and 299: Add the following** 298 Somatic dysfunction of lumbar region M99.03 299 Somatic dysfunction of sacral region M99.04	**Approved**
California – OPSC	**Lines 255 -261: Replace current language with:** Flexion posture when standing. Inability to extend lumbar spine on active and passive range of motion. Tenderness noted over lumbar and sacral regions. Muscle spasms noted of bilateral paraspinal musculature of the lumbar spine. L2 FRRSR. L/R backward sacral torsion. Neurologic exam within normal limits. Musculoskeletal strength of bilateral lower extremities equal and within normal limits.	**Approved**
Dr. Zaremski	**Lines 133 – 141: Replace current language with:** The body region(s) to which OMT is applied must be reflected within documentation of somatic dysfunction. There may be instances when multiple regions are treated when the patient has no complaints related to these areas. If there is an interrelationship such as a distant mechanical influence or the occurrence of compensatory changes, it is best to describe those when possible. Treatment should generally NOT be directed to areas of dysfunction unrelated to the diagnosis, that have no influencing nature.	**Approved**
Dr. Zaremski	Line 151: Replace current language with: … a description of how the patient tolerated the treatment, and other details consistent with typical procedure documentation.	**Approved**

New York – NYSOMS	**Lines 90-93: Replace current language with:** To perform OMT, any licensed physician must have graduated from a COCA or LCME school that has trained in osteopathic principles and practices, including hands-on demonstration and competency testing in OMT	**Disapproved - Explanatory Statement:** MDs who obtain AOA OMT designation certification can practice OMT. This language will also exclude osteopathic residents and international graduates from practicing/paid for providing OMT.
Wisconsin - WAOPS	**Lines 91 – 93:** …or a medical doctor who trains in a postgraduate osteopathic training program... OR has completed additional CME...	**Disapproved - Explanatory Statement:** MDs who obtain AOA OMT designation certification can practice OMT. Obtaining CME is not sufficient as being trained to perform OMT.
Wisconsin - WAOPS	**Line 101: Add the following** Because the evaluation and decision to utilize OMT and immediate reassessment of somatic dysfunction and symptoms following treatment is performed in the same visit, any subsequent visit should be considered new.	**Disapproved - Explanatory Statement:** CMS has statements regarding what is considered a new patient visit and what is an established patient visit. AOA guidelines must be consistent with code descriptions and CMS guidelines.
Wisconsin - WAOPS	**Line 120: Add after service – Add example** eg. Acute exacerbation of chronic low back pain due to recent garden work. Somatic dysfunction(s) consistent with presentation. Verbal consent for OMT. Immediate improvement in symptoms. Follow up as needed.	**Disapproved - Explanatory Statement:** This is not the area where examples are presented. And in the examples, we want to be simplistic versus extensive. This example was excluded for readability and to avoid confusion.
Wisconsin - WAOPS	**Lines 129 – 133: Strike and replace with:** When this occurs, the documentation should describe the compensatory changes and the rationale for treating these areas, especially if the patient has no complaints related to these areas. Treatment should be directed to the areas of documented somatic dysfunction and should not be aimed at	**Disapproved - Explanatory Statement:** The Ad Hoc Committee approved/adopted an amendment to this section that is more precise.

	areas unrelated to the diagnosis. Because the compensatory changes are due to and could contribute to the maintenance of the main somatic dysfunction, other body regions may need to be address in the same encounter to achieve satisfactory treatment response.	
Dr. Zaremski	**Lines 141 – 142: Strike the following text:** The type, frequency, and duration of OMT should be consistent with current standards of medical practice. Reason: This is overly vague and does not consider the differences between and even within practice specialties, time availability and level of knowledge and skill. Therefore, inappropriate judgements of what constitutes the “standard” will likely be applied.	**Disapproved - Explanatory Statement:** This is CMS language.
Wisconsin - WAOPS	**Line 201: Add the following bullet:** The decision to use OMT would be considered in the "low" to "moderate" MDM based on the risks, benefits, alternatives, contraindications, and patient comorbidities for risk assessment.	**Disapproved - Explanatory Statement:** This is not true in all cases, and we do not want to restrict physicians to only getting paid for OMT when billing low-level E/Ms. This proposed amendment may have unintended payment consequences.
Wisconsin - WAOPS	**Line 228: Add example before “as such,”:** Eg. Because "neck pain" treated during initial assessment, now presenting at the base of the shoulders during follow up visit, is a new problem based on anatomic location, and anatomy involved.	**Disapproved - Explanatory Statement:** This is not the area where examples are presented. And in the examples, we want to make as simplistic versus extensive.
Wisconsin - WAOPS	**Line 313: Add the following:** UPDATED EXAMPLE: Assessment and Plan: Cervicalgia, left low back pain without sciatic, somatic dysfunction of ***	**Disapproved - Explanatory Statement:** Only 1 example is presented/needed for each new patient visit and established visit. One would

	Acute on chronic exacerbation of pain from recent car trip. Trial of turmeric and magnesium to address chronic nature of pain. Has improved in past with OMT. No red flags on history or examination. Verbal consent for OMT obtained, see procedural note below. Physical Exam: *** Osteopathic Procedure Note: Osteopathic examination: Cervical: C5-C6 NRrSr, hypertonic paraspinal mm and traps bilaterally R>L Thoracic: Hypertonic PSM Ribs: Thoracic Inlet FRrSr Lumbar: Hypertonic PSM, L3-5 NRrsL Sacrum: Left on left Pelvis: Compressed left SI joint Lower Extremity: HT quads and psoas bilaterally. Treatment modalities include ST, ME, MFR. Patient tolerated procedure well without immediate complication. Reassessment demonstrated improved somatic dysfunction and symptoms. Follow Up: PRN	need to be removed and replaced. So S.O.A.P. needs to be spread out and coding added. And then a separate OMT note.
California – OPSC	**Line 423: Add the following:** Somatic dysfunction of cervical and thoracic regions is identified on examination and management (E/M).	**Disapproved - Explanatory Statement:** This is AMA language from CPT code descriptors, vignettes, and guidelines. It cannot be modified. Background: RUC requested that the AOA review existing OMT codes to develop accurate and unbiased information for the relative

		value of the physician work involved in performing OMT. The survey process resulted in the creation of procedure vignettes for typical patient encounters that include descriptions of the procedure's preservice, intraservice, and post service work for each OMT CPT Code.
California – OPSC	**Lines 560: Add the following** as part of the examination and management (E/M) somatic dysfunction is identified at the occipitoatlantal, left glenohumeral and right tibiotalar joints, as well as the…	**Disapproved - Explanatory Statement:** This is AMA language from CPT code descriptors, vignettes, and guidelines. It cannot be modified.

ACTION TAKEN: __Adopted as Amended_

DATE: _____July 19, 2025_____

SUBJECT: GIFTS TO PHYSICIANS FROM INDUSTRY
- SOURCE: H606-A/20

SUBMITTED BY: Ethics Review and Board Appeals Committee

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Ethics Review and Board Appeals Committee has reviewed the policy; and determined that it remains relevant; now, therefore be it

RESOLVED, that the Ethics Review and Board Appeals Committee recommends that the following policy be REAFFIRMED.

The American Osteopathic Association (AOA) has adopted the following "Guide to Section 17 of the AOA Code of Ethics" as follows and will distribute this information to students of osteopathic medicine and osteopathic physicians.

1. Physicians' responsibility is to provide appropriate care to patients. This includes determining the best pharmaceuticals to treat their condition. This requires that physicians educate themselves as to the available alternatives and their appropriateness so they can determine the most appropriate treatment for an individual patient. Appropriate sources of information may include journal articles, continuing medical education programs, and interactions with pharmaceutical representatives.

2. It is ethical, for osteopathic physicians to meet with pharmaceutical companies and their representatives for the purpose of product education, such as, side effects, clinical effectiveness and ongoing pharmaceutical research.

3. Pharmaceutical companies may offer gifts to physicians from time to time. These gifts should be appropriate to patient care or the practice of medicine. Gifts unrelated to patient care are generally inappropriate. The use of a product or service based solely on the receipt of a gift shall be deemed unethical.

4. When a physician provides services to a pharmaceutical company, it is appropriate to receive compensation. However, it is important that compensation be in proportion to the services rendered. Compensation should not have the appearance of a relationship to the physician's use of the company's products in patient care.

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Ethics Review and Board Appeals Committee has reviewed the
3 policy; and determined that it remains relevant; now, therefore be it

4 RESOLVED, that the Ethics Review and Board Appeals Committee recommends
5 that the following policy be REAFFIRMED.

6 The leadership and members of the American Osteopathic Association (AOA)
7 condemn the poorly researched and patently incorrect statements regarding the
8 scope of practice of U.S. trained DOs made by journalists.

9 The AOA will continue ongoing efforts using social media and other means to
10 educate the public and dispel inaccuracies of U.S. trained DOs. The AOA
11 encourages its members, affiliated organizations, our patients and our allopathic
12 colleagues to use social media and other means to accurately represent the
13 profession of osteopathic medicine to the public.

14 The AOA will continue to provide online resources and support to its members and
15 advocates to develop a grassroots social media campaign to further the
16 understanding of the profession of osteopathic medicine by the public.

17 The AOA on behalf of the osteopathic profession expresses appreciation and
18 gratitude to the journalists, organizations, and other persons that support an
19 accurate portrayal of osteopathic medicine and osteopathic physicians in the media.

SUBJECT: PREVENTING THE CRIMINAL PROSECUTION OF MEDICAL DECISION MAKING

SUBMITTED BY: Maine Osteopathic Association

REFERRED TO: Ad Hoc Committee

WHEREAS, it is essential to the role of osteopathic physicians delivering high quality health care to establish standards of practice, review them critically, and determine when they apply and when other action must be taken; and

WHEREAS, in recent years there has been an increase in the pursuit of physicians as criminals for medical decisions made in good faith, resulting in indictment, conviction, and incarceration of physicians, including leaders of medical academies and known experts[1]; and

WHEREAS, elected bodies including state legislatures, the United States congress, and law enforcement agencies within the Department of Justice, have increasingly been ignoring established rulings of licensure boards and intruding on medical issues regarding which they have had little or no formal education or training and thus inadequate understanding; and

WHEREAS, uninformed and/or rigid implementation of clinical practice guidelines incentivizes the abandonment of our nation's most complicated and vulnerable patients because of fear of physician prosecution; and

WHEREAS, there are long established, proven mechanisms for self-regulation of physicians through state boards of licensure; now, therefore be it

~~RESOLVED, that the American Osteopathic Association (AOA) will create a distinct division within the Bureau, Committee and Council (B/C/C) structure of the AOA dedicated to monitoring the activities of federal and state law enforcement agencies with regard to criminalization of physician medical decision-making, practice activity, and practice patterns and report to the House of Delegates (HOD); and be it further~~

RESOLVED, that the AOA ~~establish formal~~ **PRIORITIZE** mechanisms to interface with law enforcement agencies within the executive branch of government as well as the federal judiciary to ensure issues of medical decision-making are adjudicated by licensure boards and/or other entities with medical expertise; and be it further

RESOLVED, that the AOA will create a public statement in support of the decision-making system already in place including State Licensing Boards and medical certification boards, for the support of the organization of osteopathic physicians.

Background Information: Provided by AOA Staff
Current AOA Policy:
H325-A/22 Interference Laws

Prior HOD action on similar or same topic:
This is a resubmission of resolution H630-A24 that was referred to Maine Osteopathic Association after the House of Delegates debated the resolution. AOA's policy (H325-A/22 Interference Laws) on non-interference in the patient-physician relationship is extensive and has a strong position on protecting the patient-physician relationship.

AOA has also engaged with various agencies and state legislatures to protect physicians' autonomy in clinical decision-making.

FISCAL IMPACT: $200,000 Annually
The fiscal impact is an estimate of a new full time AOA staff position (salary and benefits only) and also assumes that all meetings and state/federal government engagement are virtual.

Based on the resolves of the resolution, the new full time AOA staff position would be responsible for:

- Monitoring the activities of federal and state law enforcement agencies with regard to criminalization of physician medical decision-making, practice activity, and practice patterns and report to the House of Delegates (HOD).

- Interface with law enforcement agencies within the executive branch of government as well as the federal judiciary to ensure issues of medical decision-making are adjudicated by licensure boards and/or other entities with medical expertise.

ACTION TAKEN: __Adopted as Amended___

DATE: ____July 19, 2025_____

SUBJECT: PROTECTING PATIENT CARE: OPPOSING THE GROWING IMPACT OF PRIVATE EQUITY AND THE CORPORATE PRACTICE OF MEDICINE

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Ad Hoc Committee

WHEREAS, the Corporate Practice of Medicine Doctrine prohibits corporations from practicing medicine or employing physicians, with the aim of ensuring medical decisions are based solely on patient needs free from profit-driven motives; and

WHEREAS, the Corporate Practice of Medicine prohibition serves to protect patients, preserve the physician-patient relationship, and maintain physician autonomy, as supported by existing AOA policy (H358-A/19); and

WHEREAS, existing AOA policies already recognize the harms to patients resulting from market consolidation and mergers by non-physician corporate entities (H338-A/19, H339-A/19, H617-A/21), without specifically addressing the role of private equity firms; and

WHEREAS, the consolidation of medical practices by private equity firms and other corporate interests has resulted in a majority of physicians being employees with no ownership in their practice (77.6% as of April 2024, up from 40% in 2016)[1,2]; and

WHEREAS, the private equity acquisition of medical practices in rural areas often leads to the consolidation of and subsequent closure of medical practices and rural hospitals - further worsening healthcare access in rural communities; and

WHEREAS, private equity ownership of medical practices creates financial conflicts of interest, which have been shown to degrade quality of healthcare[3,4,5], increase costs[4,6], and undermine physician autonomy and the physician-patient relationship[6]; now, therefore be it

RESOLVED, t~~hat the American Osteopathic Association (AOA) support legislative efforts to protect patient care, access, and the physician-patient relationship by limiting and regulating the Corporate Practice of Medicine, and the acquisition of medical practices, hospitals, and other such institutions by private equity firms~~**TO PROTECT PATIENT CARE, ACCESS, AND THE PATIENT PHYSICIAN RELATIONSHIP, THE AOA SUPPORTS LEGISLATIVE EFFORTS THAT LIMIT AND REGULATE THE CORPORATE PRACTICE OF MEDICINE, INCLUDING ACQUISITION OF**

32 **MEDICAL PRACTICES, HOSPITALS, AND OTHER SUCH INSTITUTIONS**

SUBJECT: ~~FEDERAL~~ LOAN AVAILABILITY FOR OSTEOPATHIC MEDICAL STUDENTS

SUBMITTED BY: New York Osteopathic Medical Society

REFERRED TO: Ad Hoc Committee

WHEREAS, the House Education and Workforce Committee voted to approve its portion of the federal budget reconciliation bill. Without further correction, this legislation eliminates Grad PLUS Loans and caps federal student professional borrowing at ~~$150,000~~ **$200,000**; and

WHEREAS, a 2013 study of medical school debt by race, it was discovered that more than 62% of surveyed medical students anticipated having debt greater than $150,000[i]; and

WHEREAS, the average total cost of medical school tuition and living expenses is $238,420 ranging from $167,476 for in-state, public schools to $275,068 for out-of-state, private school[ii] [iii]; and

WHEREAS, Additional known expenditures for osteopathic medical students includes taking COMLEX licensing examinations for which Level 1 costs $730, Level 2-CE costs $730, and Level 3 costs $910. Taking all three levels of the COMLEX-USA costs a total of $2,370[iv] (These fees do not include additional costs such as travel to testing centers, preparation materials, or rescheduling fees); and

WHEREAS, other variable expenses include room, board and travel expenses, especially when attending off-site clinical rotations; and

WHEREAS, at a time when our nation faces a growing physician shortage, it is critical that the main sources of financial support being significantly reduced or eliminated not impose unnecessary barriers on future physicians[v]; and

WHEREAS, eliminating the PLUS program would make it harder for future doctors to afford medical school and worsen the physician shortage, especially in rural and underserved communities; and

WHEREAS, the proposed budgetary limits could affect significantly more than 60% of students pursuing medicine and other health professions[vi]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) ~~work with other interested entities to~~ **WILL WORK WITH RELEVANT STAKEHOLDERS TO** advocate for ~~the restoration of~~ appropriate **LOW-COST GOVERNMENT**

31 **AND PRIVATE** loan availability for **OSTEOPATHIC** medical student

2025 RESOLUTION ROSTER (700 SERIES)
As of 07-19-25

HOUSE OF DELEGATES REFERENCE COMMITTEE DESCRIPTION:
Joint Board/House Budget Review Committee (700 series)
This committee reviews the AOA Strategic Plan and Budget.

Res. No.	Resolution Title	Submitted By	Reference Committee	Action
H-700	Approval to Concur with the AOA FY 2026 Expenditures	Finance Committee	Joint Board House Budget Review Committee	Adopted
H-701	Budget Adjustment Parameters	Finance Committee	Joint Board House Budget Review Committee	Adopted

SUBJECT: Approval to Concur with the AOA FY 2026 Annual Budget

SUBMITTED BY: AOA Finance Committee

REFERRED TO: Joint Board/House Budget Review Committee

WHEREAS the AOA Association's Bylaws Article VII section 1 c. includes that the Board of Trustees "have the responsibility of management of the finances of the Association and shall authorize and supervise, the House of Delegates concurring, with the annual budget for the fiscal year"; and

WHEREAS, the Joint Board/House Budget Review Committee has convened, reviewed, and approved the AOA FY 2026 Operating Budget, the AOA FY 2026 Capital Expenditures Budget and the AOA FY 2026 142 E. Ontario Building Budget reports as submitted; now therefore be it

RESOLVED, the American Osteopathic Association House of Delegates approves the AOA FY 2026 Annual Budget as provided.

SUBJECT: BUDGET ADJUSTMENT PARAMETERS - SOURCE: H701-A/22

SUBMITTED BY: Finance Committee

REFERRED TO: Joint Board/House Budget Review Committee

WHEREAS, this policy is to be reviewed for sunset every three years; and

WHEREAS, the Finance Committee has reviewed the Budget Adjustment Parameters Policy to confirm the policy remains relevant and appropriate and has provided input to the Joint Board/House Budget Review Committee; and

WHEREAS, the Joint Board/House Budget Review Committee has reviewed the Budget Adjustment Parameters Policy to confirm the policy remains relevant and appropriate; now, therefore be it

RESOLVED, that the Budget Adjustment Parameters policy as noted below has been reviewed by the Finance Committee and Joint Board/House Budget Review Committee and is reported to the House of Delegates with the reference committee report in July 2025.

Budget Adjustment Parameters Policy

Without explicit approval of the Joint Board/House Budget Review Committee the AOA Board of Trustees may take no financial actions between meetings of the AOA House of Delegates which, when taken together, either decrease AOA's cash or increase its long term or recurring short term debt (to include operating leases and other contractual obligations) to an aggregated amount greater than 10% of the AOA's total equity as audited in the prior year; and, that this policy will be reviewed by the Joint Board/House Budget Review Committee every three years.

Background Information: Provided by AOA Staff

The above budget adjustment parameters were initially approved by the Joint Board/House Budget Review Committee in July 1995. These parameters were re-affirmed by the Joint Board/House Budget Review Committee in July 1998, July 2001, July 2004, July 2007, July 2010, July 2013, July 2016, July 2019 and July 2022.

SUBJECT: CLASSIFICATION OF OSTEOPATHIC MEDICAL GRADUATES AS U.S. MEDICAL GRADUATES IN ELECTRONIC RESIDENCY APPLICATION SERVICE – SOURCE: H230-A/19

SUBMITTED BY: Bureau of Osteopathic Education

REFERRED TO: Committee on Educational Affairs

---

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau of Osteopathic Education has reviewed the policy; and

3 WHEREAS, the Bureau of Osteopathic Education has reviewed the current medical
4 school types reported in the American Association of Medical Colleges'
5 Electronic Residency Application Service, and

6 WHEREAS, the Bureau of Osteopathic Education has determined the policy is no
7 longer relevant, now therefore be it

8 RESOLVED, that the Bureau of Osteopathic Education recommends that the
9 following policy be SUNSET.

10 The American Osteopathic Association advocates to the American Association of
11 Medical Colleges to adjust Electronic Residency Application Service filters based on
12 medical school type such that Osteopathic applicants are included and recognized
13 within the US Public or Private Medical Graduates category.

Background Information: Provided by AOA Staff
Current AOA Policy: As noted above (2019)

Prior HOD action on similar or same topic: As noted above.

Following the adoption of this resolution in 2019, AOA staff met with Electronic Residency Application Service (ERAS) staff to advocate for a change to the medical school type listing in ERAS.

2019 ERAS Medical School Type	2020 ERAS Medical School Type
Canadian	Canadian School
International	International School
Osteopathic	US D.O. School
US Private School	US M.D. Private School
US Public School	US M.D. Public School

The Bureau of Osteopathic Education (BOE) supports the current listing in ERAS and believes that osteopathic medical schools should be distinctly listed and recommends the policy be sunset.

SUBJECT: AOA RECOGNITION OF THE AMERICAN COLLEGE OF OSTEOPATHIC PEDIATRICIANS (ACOP) AND AMERICAN OSTEOPATHIC BOARD OF ~~PEDIATRICIANS~~ **PEDIATRICS** (AOBP)

SUBMITTED BY: American College of Osteopathic Pediatricians (ACOP)

REFERRED TO: Committee on Educational Affairs

WHEREAS, the American College of Osteopathic Pediatricians (ACOP) was founded in 1940 by Drs. James M. Watson and Evangeline Percival, to serve as the medical home for all osteopathically trained pediatric physicians in the U.S.; and

WHEREAS, the year following in 1941 the American Osteopathic Board of Pediatrics (AOBP) was established as means to ensure that all osteopathically trained pediatricians could be licensed by an osteopathic board of medicine for ongoing education; and

WHEREAS, since the initiation of pediatric-specific residency programs, the ACOP and AOBP have remained as the primary medical home and licensing organizations for all AOA-accredited training programs. ~~This existed until 2020 at which time due to the AOA-ACGME Combined Accreditation Agreement (aka the "Merger") placed all residency training programs under the surveillance of the ACGME;~~ and

WHEREAS, pediatrics remains a top residency choice for osteopathic medical students, ranking 4th in the 2024 Match. U.S. DO students matching into a pediatrics residency program remained consistent at 602 graduating seniors as compared to 614 in 2023; and

WHEREAS, entrance into a pediatrics residency has continued to decrease over current years, with 251 unfilled positions in the 2024 Match; an increase from the 83 unfilled positions in the 2023 Match. In contrast the percentage of first-year pediatric residents coming from osteopathic medical schools remains stable. For the 2024 Match 21.5% of all matching first-year pediatric residents were U.S. DO medical students; meaning slightly more than 1 in 5 pediatric trainees in the U.S. is a DO pediatrician-in-training; and

WHEREAS, despite this the Association of Pediatric Program Directors (APPD) and American Academy of Pediatricians (AAP) continue to have institutional memberships, ensuring automatic membership into the AAP for all incoming pediatric residents, and with that membership in the AAP Section of Osteopathic Pediatricians (SOOPe) which is free for all DO members; and

32 WHEREAS, this has led to a significant drop in ACOP membership from the student
33 to resident level, with student membership remaining steady at over 1700
34 members from April 2020 – April 2024 however, resident and fellow-in-
35 training membership having fallen from a record high of 609 to 34 members
36 over the same time period; now, therefore be it

37 RESOLVED, that the American Osteopathic Association (AOA) officially recognizes
38 the American College of Osteopathic Pediatricians (ACOP) as the official
39 medical home and educational organization for all osteopathically trained
40 pediatric residents and trainees; and, be it further

41 RESOLVED, that the AOA recognizes the American Osteopathic Board of
42 Pediatrics (AOBP) as the primary certifying organization for all
43 osteopathically trained pediatric residents, with the exception of those
44 pediatric residents wishing to extend training to a pediatric subspecialty for
45 which the AOBP does not currently have a certifying examination; and, be it
46 further

47 RESOLVED, that the AOA will support the ACOP in ongoing efforts with the
48 Association of Pediatric Program Directors (APPD) to encourage all DO
49 pediatric residents to continue membership in the ACOP by establishing
50 institutional memberships similar to those currently offered by the AAP to
51 residency programs to ensure the smooth transition from student-member to
52 resident-member status; and, be it further

53 RESOLVED, the AOA will continue to support and engage with the ACGME and
54 ABP to encourage the acceptance and equivalence of the AOBP Pediatric
55 certifying exam for DO-trained pediatric residents who wish to continue
56 training in an ACGME-accredited pediatric subspecialty fellowship. While the
57 AOBP continues to further expand its subspecialty offerings.

ACTION TAKEN: Adopted as Amended

DATE: July 20, 2024

SUBJECT: INTERDISCIPLINARY EDUCATION AND HIGH-VALUE CARE

SUBMITTED BY: Montana Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, resolution H426-A/23 Osteopathic Medicine is High-Value Care was adopted as American Osteopathic Association (AOA) policy at the 2023 AOA House of Delegates (HOD), which defined Osteopathic medicine, including Osteopathic Manipulative Treatment (OMT}, as high-value care; and

WHEREAS, a major requirement of high-value care is the need for interdisciplinary collaboration and education to delineate the high-value care that each specialty can best identify within that specialty; and

WHEREAS, historically, the Osteopathic profession has provided a high level of interdisciplinary education at all levels of education, particularly at the graduate medical education (GME) and continuing medical education (CME) levels; and

WHEREAS, this focus in Osteopathic education occurred, in large part, because all AOA specialties were required to: 1} do rotating internships before choosing a certain specialty, and, 2) obtain AOA category 1-A credits as part of their CME requirement for all specialties and this 1-A credit category, to a great extent, included interdisciplinary education and collaboration; and

WHEREAS, the adoption of a single accreditation pathway for the AOA and Accreditation Council of Graduate Medical Education (ACGME) GME, completed in July, 2020, allowed, but did not require, an Osteopathic recognition pathway for any GME program; and

WHEREAS, the continued growth in the number of graduates of Colleges of Osteopathic medicine (COM's) and GME programs has complicated the issue of GME programs including Osteopathic recognition pathways due to the fact that most GME programs currently do not have the history of being previous AOA GME accredited programs; and

WHEREAS, as HOD resolution H426-A/23 Osteopathic Medicine is High-Value Care stated, Osteopathic Principles and Practice (OPP), including OMT, is an approach to excellent patient care (high-value care}, and will tend to be lost in medical education unless it remains a formal part of medical education; now, therefore be it

32 RESOLVED, that the American Osteopathic Association (AOA) explore and define
33 ways to encourage interdisciplinary (specialty) education and collaboration,
34 to further promote high-value care in all levels of education: Colleges of
35 Osteopathic Medicine (COM's), graduate medical education (GME) through
36 communication with the Accreditation Council of Graduate Medical Education
37 (ACGME), and continuing medical education (CME); and, be it further

38 RESOLVED, that the AOA work with osteopathic stakeholders to promote this
39 educational focus, including: the American Association of Colleges of
40 Osteopathic Medicine (AACOM), the National Board of Osteopathic Medical
41 Examiners (NBOME), and osteopathic specialty societies.

SUBJECT: SUPPORT FOR INCREASING ACCESS TO TRAINING OPPORTUNITIES IN AMERICAN INDIAN AND ALASKA NATIVE COMMUNITIES

SUBMITTED BY: Oklahoma Osteopathic Association

REFERRED TO: Committee on Educational Affairs

WHEREAS, the federal government has a unique government-to-government relationship with 574 federally recognized tribes based on Article I, Section 8 of the U.S. Constitution; and

WHEREAS, the federal government has committed itself to provide health care services to Tribal nations under its self imposed enforceable federal Indian trust responsibility, which includes a legal fiduciary obligation to provide basic social, medical, and educational services for American Indians and Alaska Natives (AI/ANs);[1] and

WHEREAS, AI/AN are three times as likely as White individuals to be diagnosed with diabetes and to receive late or no prenatal care;[2] while they are disproportionately affected by multiple chronic conditions, including heart disease, cancer, diabetes, and stroke, as well as unintentional injuries, and;

WHEREAS, AI/AN have a lower life expectancy than their White counterparts (65.2 years vs 76.4 years), with AI/AN communities experiencing a 6.6-year decline between 2019 and 2021;[3] and

WHEREAS, the Indian Health Service (IHS) provides health care to over 2.8 million AI/AN through IHS and Tribal Health Programs and Urban Indian Organizations, often referred to as the I/T/U or the Indian Health system;[4] and

WHEREAS, the IHS is chronically under-funded compared to other federal health care systems, and the lack of funds has contributed to health disparities in Tribal communities;[5] and

Current AOA Policy:

The resolved statements are covered by content in the following policies:

- H218-A/21 Graduate Medical Education Funding and Incentives – "The AOA…supports the distribution of federal funds for GME, prioritizing areas of most need for physician training (DO and MD) programs based upon geography and specialty…"

- H200-A/20 Graduate Medical Education – Training of US Medical School Graduates – "The AOA advocates for the elimination of limitations on the number of funded graduate medical education positions to accommodate increases in US medical school enrollment; places great emphasis on establishing graduate medical education opportunities for osteopathic medical school graduates in geographic areas that lack adequate training capacity and as needed to meet future workforce needs."

- H201-A/19 Graduate Medical Education – Increasing Opportunities – "The AOA supports the efforts to increase the number of graduate medical education training positions available to United States medical graduates."

The policies above allowed Public Policy to advocate and join a letter in support of the inclusion of $30 million in new funding in the FY25 appropriations bill to address chronic clinical staff shortage across Indian Country through graduate medical education programming. Fuding was directed to Indian Health Services Facilities, Tribally Operated "638" Programs, and Urban Indian Organizations, collectively referred to as I/T/Us. The letter can be accessed here.

SUBJECT: RESOLUTION ON CREDENTIAL REQUIREMENTS FOR PRESIDENTS AND LEADERS OF OSTEOPATHIC MEDICAL SPECIALTY ~~BOARD SOCIETIES~~ **COLLEGES**

SUBMITTED BY: Wisconsin Association of Osteopathic Physicians and Surgeons

REFERRED TO: Committee on Educational Affairs

WHEREAS, THE AMERICAN OSTEOPATHIC ASSOCIATION PROMOTES PHYSICIANS LEADING PHYSICIANS; AND

WHEREAS, THE AMERICAN COLLEGE OF CARDIOLOGY APPOINTED AN MSN, FACC AS THE FIRST NON-PHYSICIAN PRESIDENT IN 2023; AND

WHEREAS, the ~~American~~ Osteopathic **PHYSICIAN** community recognizes the vital role played by the leaders of osteopathic medical specialty ~~board societies~~ **COLLEGES** in shaping the future of the profession and upholding the highest standards of medical practice; and

~~WHEREAS, diversity in leadership can contribute to a broader perspective and foster collaboration within the medical community; and~~ **WHEREAS, SELECTED CANDIDATES SHOULD EXHIBIT OUTSTANDING LEADERSHIP SKILLS, A COMMITMENT TO EVIDENCE-BASED MEDICAL PRACTICE, AND DEDICATION TO ADVANCING OSTEOPATHIC MEDICINE; AND**

~~WHEREAS, acknowledging the educational achievements of individuals with different medical degrees can lead to a more inclusive and integrated approach to osteopathic medicine; and~~

WHEREAS, the ~~American~~ Osteopathic **PHYSICIAN** community seeks to promote unity and cooperation among healthcare professionals, regardless of their medical training background; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) hereby ~~establishes the following requirements for all presidents and leaders of any and all osteopathic medical specialty board societies~~ **RECOMMENDS**:

~~Credential Requirements:~~ **THAT ALL** candidates seeking ~~to become presidents or leaders of~~ **LEADERSHIP WITHIN** osteopathic medical specialty ~~board societies~~ **COLLEGES** ~~must~~ **BE PHYSICIANS** ~~hold~~ **HOLDING** one or more of the following credentials: Doctor of Osteopathic Medicine (DO), Doctor of Medicine (MD), or Bachelor of Medicine, Bachelor of Surgery (MBBS).

~~Emphasis on Inclusivity: The American Osteopathic Association encourages a diverse pool of qualified candidates to apply for leadership positions within the osteopathic medical specialty board societies. This diversity should reflect the broad spectrum of medical training backgrounds, fostering an environment that promotes mutual understanding and collaboration.~~

~~Qualifications and Merit: While credential requirements serve as a foundational criterion, candidates will be evaluated primarily based on their qualifications, experience, expertise, and dedication to advancing osteopathic medicine. The selection process will focus on identifying individuals who exhibit outstanding leadership skills, a commitment to evidence-based medical practice, and a vision for the future of osteopathic medicine.~~

~~Implementation and Compliance: The American Osteopathic Association shall work collaboratively with all osteopathic medical specialty board societies to implement and ensure compliance with these credential requirements. The establishment of a transparent and standardized selection process shall be pursued to uphold the principles of fairness, equality, and inclusivity in leadership positions.~~

~~Review and Revision: The credential requirements and selection process for leaders of osteopathic medical specialty board societies shall be periodically reviewed to adapt to the evolving needs and dynamics of the medical profession. Any revisions shall be made in consultation with relevant stakeholders to maintain the integrity and efficacy of the leadership selection process; now therefore be it further~~

~~RESOLVED, that the AOA by adopting these credential requirements, aims to reinforce its commitment to fostering unity, inclusivity, and excellence within the osteopathic medical community. Through strong and qualified leadership, the profession can continue to grow, adapt, and provide optimal healthcare for patients and communities.~~

SUBJECT: IMPORTANCE OF ACCREDITED TRAINING AND BOARD CERTIFICATION IN AEROSPACE MEDICINE FOR THE GROWING COMMERCIAL SPACE INDUSTRY

SUBMITTED BY: American Osteopathic College of Occupational and Preventive Medicine

REFERRED TO: Committee on Educational Affairs

WHEREAS, the commercial space industry continues to grow and push the envelope of human spaceflight, with more private citizens, new vehicles, new mission objectives, and operationally untested flights every year;

WHEREAS, The Aerospace Medical Association passed a similar resolution on 13 January, 2024 (2022-01) and seeks AOA support of same.

WHEREAS, crew and passenger safety, health, and mission success remain the highest priorities in our practice as Aerospace Medicine (AM) physicians;

WHEREAS, no current requirements or standards exist for medical providers working at commercial space companies, driving the creation of unregulated and unaccredited medical training pathways and the hiring of providers untrained in Aerospace Medicine;

WHEREAS, externally validated, national standards and core competencies have existed through the Accreditation Council of Graduate Medical Education (ACGME) and international equivalent-accredited Aerospace Medicine residency/fellowship programs and Specialty Boards since 1953, and are the established and recognized industry standards;

WHEREAS, precedent exists per AsMA Resolution 2020-01 and AOA Policy H201-A/2021 Vital Nature of Board-Certified Physicians in Aerospace Medicine (dated June 8 and July 17, 2021, respectively) affirming the "unique leadership roles, contributions, and advanced qualification of Aerospace Medicine professionals, and opposes all efforts to remove, reduce or replace Aerospace Medicine physician leadership in civilian, corporate or government Aerospace Medicine programs and aircrew healthcare support teams";

WHEREAS, board-certified AM specialists provide:

1) Operational experience and specific training in spacecraft systems and the health effects of microgravity

2) Technical authority and medical subject matter expertise on human-in-the-loop risk assessments, elimination of hazards, and trained responses to mishaps (i.e., the full spectrum from prevention to contingency response)

3) Medical screening of individuals, whose medical issues may compromise mission safety, via the specialist's education in population health

4) Clinical expertise by interfacing with crew and passengers in matters to which engineers and managers in their traditional roles are not privy, to understand and mitigate health conditions that might impact spaceflight crew performance; now, therefore be it

RESOLVED**,** that the American Osteopathic Association (AOA) affirms the importance of ACGME and international equivalent-accredited, standardized training and board certification in Aerospace Medicine as the highest standard of comprehensive physician training for human health, performance, and safety in human spaceflight and commercial aviation; and be it further

RESOLVED**,** that AOA recommends corporate and government aerospace communities have board-certified Aerospace Medicine (AM) physicians in leadership and operational roles within their integrated Aerospace Medicine (AM) and healthcare management teams; and be it further

RESOLVED**,** that AOA encourages current AM specialists to guide and mentor new programs and trainees toward a path of obtaining internationally recognized credentials, including but not limited to ~~Royal College of Physicians (UK), American Board of Preventive Medicine, and~~ American Osteopathic Board of Preventive Medicine board certification in order to maintain the aforementioned standards as the commercial space industry expands.

ACTION TAKEN Adopted as Amended

DATE July 20, 2024

SUBJECT: CERTIFYING BOARD SERVICES WORKGROUP REPORT (POLICY H212-A/23 PROMOTION OF AOA BOARD CERTIFICATION)

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Educational Affairs

WHEREAS, the 2023 House of Delegates adopted Policy H212-A/23 Promotion of AOA Board Certification; and

WHEREAS, President Monka established the Certifying Board Services Workgroup to refine the process and expand awareness of the unique value offered by AOA board certification; and

WHEREAS, Policy H212-A/23 Promotion of AOA Board Certification requires the AOA to provide a report to the House of Delegates; now, therefore be it

RESOLVED, that the 2024 House of Delegates accept the AOA Certifying Board Services Workgroup Report.

AOA Certifying Board Services Workgroup Report

In April 2023, Ira P. Monka, DO, then President-Elect, established the AOA Certifying Board Services Workgroup. The desired outcomes of the workgroup were:

- Establish specific recommendations to enhance initial AOA Board Certification as the premier choice for osteopathic residents and fellows.
- Establish specific recommendations to enhance Osteopathic Continuous Certification process for current diplomates.

Twenty-five individuals were appointed to the Workgroup, under the leadership of Co-Chairs Stephen M. Scheinthal, DO and Bruce A. Wolf, DO. The Workgroup membership included leaders who serve as Designated Institutional Officers **(DIO),** Deans, Program Directors, and Directors Osteopathic Education as well as individuals with extensive experience on the Bureau of Osteopathic Specialists, Specialty Certifying Board Chairs, and specialty colleges. In addition, there were specialty/state affiliate executive directors and new diplomates, residents, fellows, and students.

The Workgroup met monthly from May to September. The first meetings focused on conducting a SWOT analysis, TOWS analysis, problem identification, and solution generation. Following its August meeting, the Workgroup drafted 38 recommendations. The draft recommendations were distributed in a feedback survey to Workgroup members, Bureau of Osteopathic Education members, Bureau of Osteopathic Specialists members, Bureau of Emerging Leaders members, specialty certifying board members, and state and specialty affiliate executive directors. Seventy-five individuals responded. In addition, Certifying Board Services staff also provided their input utilizing their knowledge about the operationality of the recommendations.

Utilizing the feedback received from stakeholders, the recommendations were revised and consolidated to 17 recommendations. Workgroup members then finalized and prioritized the recommendations at their September meeting for submission to the BOT.

The BOT approved the 17 recommendations at their October meeting:

1. Work with Marketing staff and AOA specialty certifying board staff to develop engaging, persuasive, and specialty-specific content for DIOs, program directors, coordinators, AOA board-certified core faculty, and residents.
    - Utilize analytics to provide more information (i.e., offer webinars, send printed materials) to individuals who open and click links in emails.
    - Provide specialty colleges with copies of these emails to help disseminate the message and be aware when the messaging will be arriving.
    - Consider sending emails to residents tailored to their PGY.
2. Simplify/Refresh the AOA Board Certification website, including each individual specialty certifying board's sites, to improve dissemination of specialty-specific information among diplomates, students/COMs, residents, and program directors in order to provide details about board exam processes, roadmaps, and essential resources.
    - For students and residents - a specialty-specific roadmap to major conferences and leadership opportunities that will help shape their career path and lead them to AOA Board Certification.
    - For diplomates – include timeline about the recertification process.
    - For GME leaders - Provide relevant information on exam quality, acceptance, and ACGME requirements, illustrating that selecting AOA over ABMS board certification will ensure that residents are not left out from future opportunities.
3. Engage with all program directors to ensure they know about AOA Board Certification. When new programs are accredited or there is a program director change, contact them to orient them to AOA Board Certification.
4. Continue to stress that it is an ACGME requirement that residents are educated on their board certification options.
    - Collect data on whether residents are receiving information on what boards they are eligible for from their programs. Utilize this data to inform conversations with the ACGME Board and Review Committees.
    - Create PowerPoint slides for teaching purposes at residency programs (information to be given by program coordinators, directors, chief residents).
5. Have a dedicated board certification marketing staff member (similar to the dedicated membership marketing staff) that works closely with AOA specialty certifying board staff to develop engaging, persuasive, and specialty-specific content for various marketing materials such as emails, social media posts, DO articles, and more.
6. Increase the formal AOA Board Certification presentations at national medical education meetings, program director association meetings, student and resident conferences, and osteopathic affiliate conferences, utilizing AOA board certified physicians who will already be attending these conferences to control cost.

7. Refresh AOA Physician Portal to become a one-stop page showing diplomate's OCC status (including action directives) and send out emails with more frequent and personalized information about how to access OCC process.
8. Strengthen relationships with our osteopathic specialty colleges by having at least annual meetings with specialty college and specialty board leadership and no less than semiannual contact between AOA board staff and specialty college staff.
9. Connect with osteopathic stakeholder organizations, specialty colleges, state societies, COM Deans, SOMA and COSGP to begin talking about AOA Board Certification, providing slides and talking points to share at their meetings with students, residents, and medical educators.
10. Continue to support innovations regarding pricing, exam timing, and content to meet the needs of residents, candidates, and diplomates. Partner with specialty colleges and osteopathic foundations for initial certification grants.
11. Provide opportunities for AOA specialty certifying boards to share best practices and their innovative models for longitudinal assessment and quality improvement, striving to be more meaningful and relevant to diplomates.
12. Investigate providing specialty colleges with access to see their member's general certification information (i.e., certification expiration; OCC status) to help answer their members' questions.
13. Engage with state societies ~~especially the larger~~ specialty boards, ~~in addition to~~ **AND** specialty colleges.
14. Increase awareness of AOA board certification with students throughout their medical school journey by including information on board certification in AOA student communications and COM visits.
15. Grow the subject matter expert/item writer pools for each specialty by conducting a needs assessment and organize an item writer recruitment campaign, including highlights of the incentives for AOA certification volunteers (50% off AOA membership, earning CME, exam/longitudinal assessment waivers).
16. Standardize the AOA certifying board member nomination process to reach diplomates who may not be aware of leadership opportunities available and expand our volunteer pool to introduce fresh perspectives that can enrich the certifying board.
17. After passing the initial certification exam, send any information about how new diplomates, maintain OCC, can track their CME and what the AOA certifying board and AOA membership can do for them.

At its Midyear Meeting, the BOT approved the use of $361,000 from reserves for the following items: Director of Certification Marketing FTE, Website enhancements, IT development costs to enhance OCC dashboard, and resident/recent graduate survey.

SUBJECT: END-OF-LIFE CARE – USE OF PLACEBOS IN – SOURCE: H322-A/19

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the policy was reviewed by two End of Life Care experts, including a member of the Bureau of Osteopathic Research and Public Health, who determined that the current is accurate as written, now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED.

End-of-Life Care – Use of Placebos In

Policy Statement

The AOA approves the attached position paper on Use of Placebos for Pain Management in End-of-Life Care and will be updated according to the current literature.

USE OF PLACEBOS FOR PAIN MANAGEMENT IN END-OF-LIFE CARE

The placebo effect of medication can be a significant resultant action of any prescription. However, the substitution of a placebo in place of effective pain medication has been widely recognized as unethical, ineffective and potentially harmful. ([1-9]) A number of organizations have advised against the use of placebo substitution, including the American Pain Society, Agency for Healthcare Policy and Research, World Health Organization, the Healthcare Facilities Accreditation Program, Joint Commission on Accreditation of Healthcare Organizations, Education on End-of-Life Care Project (co-sponsored by the American Medical Association), American Nursing Association, and the American Society of Pain Management Nurses.

This white paper describes the literature and rationale in support of the AOA's position on the controversial subject of the use of placebos for pain management in terminally ill patients.

I. Definition of Terms

A. Placebo, placebo substitution, placebo effect and nocebo response

A placebo is a substance presumed to be pharmacokinetically inert. Placebo substitution means the substitution of a physiologically inactive substance for a comparison with the physiologically active substance. Placebo effect is the positive psychosomatic response of an individual to a treatment; in contrast, the nocebo response is a negative psychosomatic response to a treatment. ([10]) The placebo effect is an important adjunct in the treatment of symptoms. The alleviation of symptoms has an inherent positive psychological component; patients who perceive their symptoms to be relieved by the treatment and trust in their treating physician's treatment plan and/or prescription for the symptom relief are more likely to obtain relief. ([4, 2])

Placebo responses are necessary for controlled clinical trials in which the patient is informed that a placebo may indeed be utilized. Physiologic responses to placebo can be pleasant or unpleasant to the patient. An unpleasant effect attributable to administration of a placebo is called a "nocebo response". A pleasant effect is called a "positive placebo response". It has been noted that, "a positive placebo response simply speaks to the strength of an individual's central control processes (i.e., mind) to recruit their descending inhibitory system to block pain. The trained osteopathic physician knows that pain relief occurs both in the mind and in the body." ([4]) The basis of the placebo effect in a therapeutic physician-patient relationship also involves good communication skills as well as listening to the patient. ([4, 11, 12])

To summarize, a placebo is a type of treatment, necessarily used in controlled clinical trials, that has no inherent physiological action yet is designed to mimic a therapy with a known active physiologic effect. Positive changes resulting from placebo administration would be due to expectations of success by the patient. Thus, the use of placebo effect is based on the patient's perception of the role of the placebo agent with symptom relief. The placebo response may be enhanced with a positive patient-physician relationship.

B. Addiction, substance abuse and dependence, tolerance, withdrawal and pseudo-addiction.

Some physicians inappropriately justify using placebo in pain management to avoid "addicting" the patient. Addiction, as defined by the American Academy of Pain Medicine,([13]) "is a primary, chronic, neurobiologic disease, with genetic, psychosocial, and environmental factors influencing its development and manifestations. It is characterized by behaviors that include one or more of the following: impaired control over drug use, compulsive use, continued use despite harm, and craving."

Substance abuse is defined as psychological and physical dependence on substances. Some physicians are concerned that prescribing narcotics may lead to substance abuse and therefore may attempt to use a placebo to assess whether the patient truly requires narcotics for pain relief. However, there is no scientific basis for using placebo in the assessment of the patient in pain who has or may have the potential for a substance abuse. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-V)

([14]), lists definitive criteria for diagnosis of psychological and physical dependence on substances. This text categorizes “Substance-Related Disorders” but does not utilize the term addiction; further, nowhere in the DSM-V is placebo administration utilized with criteria for diagnosing various forms of substance abuse. Substance dependence is defined as a cluster of cognitive, behavioral and physiological symptoms. The essential feature of a substance dependent individual is continuous use of the substance despite significant substance-related problems, such as deleterious effects on occupation, relationships, health, and others.

Physicians may become uncomfortable with requests for increased dosages of pain medications, fearing that a patient is manifesting a substance-related disorder. A better understanding of the concepts of tolerance, physical dependence, physiological dependence withdrawal symptoms and pseudo-addiction, may help physicians understand and more effectively treat these patients.

Tolerance represents a markedly diminished effect that can occur with continued use of most medications; the degree depends upon the daily dose and length of use. The need for medication titration, either due to development of tolerance or to incomplete responsiveness, is a part of routine medical care. Tolerance occurs due to compensatory changes in receptors and/or increased clearance resulting from induction of various metabolic pathways. The problem of tolerance should therefore be anticipated as a possible outcome in prescription pain medications.

Withdrawal is defined by the DSM-V ([14]) as a maladaptive behavioral change having physiological and cognitive concomitants, which occurs when blood or tissue concentrations of a substance decline in an individual who had maintained prolonged use of the substance, frequently inappropriately. Examples of withdrawal include the onset of seizures or delirium tremens in a newly abstinent alcohol chemically dependent individual.

Pseudo-addiction is the term used to describe the behavior of a patient in pain who is receiving an insufficient amount and/or an inappropriate dosing frequency of administration of the prescribed pain medication. In an effort to obtain relief, the patient in pain would request more frequent and/or increased medication. Such “drug seeking behavior” has been deemed as “proof” of “addiction.” The reason for such requests is frequently that the patient is under-dosed, receiving too little of the medication and/or too long a delay between doses of the pain medication. In such instances, the patient receives inappropriate pain relief, which is not an appropriate criterion of a substance-abusing patient according to the DSM-V. ([14])

II. Legal Considerations in the Use of Placebos in Pain Management

While there are no specific laws governing the use of placebos in any circumstance, there is a considerable amount of legislation regarding a patient’s right to pain management. There are several state statutes that address this issue, some of which are based on the Federation of State Medical Boards’ Model Guidelines for the Use of Controlled Substances for the Treatment of Pain.([15]) This document clarifies that legislative statutes accepting these guidelines understand the ongoing increased scientific knowledge of pain

management, and thus have no need to modify legislation as the science of pain management changes. This document does not mention placebo usage.

The American Bar Association (ABA) ([16]) adopted a resolution concerning the promotion of pain management in all patients with chronic pain. This resolution states, "…that the American Bar Association urges federal, state, and territorial governments to support fully the rights of individuals suffering from pain to be informed of, choose, and receive effective pain and symptom evaluation, management and ongoing monitoring as part of basic medical care, even if such pain and symptom management may result in analgesic tolerance, physical dependence or as an unintended consequence shorten the individual's life." Placebo substitution for active pain medicine without informed consent on the part of the patients clearly violates the nature and substance of the ABA's position. Additionally, in two Supreme Court decisions regarding the right to assisted suicide, the court promoted the right of individuals to appropriate palliative care and pain management. ([17, 18])

While there is little case law concerning tort or administrative findings against physicians for inadequate pain management, this is likely to change in the near future. The main barrier to malpractice claims for inadequate pain management is use of the customary local standard to determine what constitutes ordinary care. The courts are steadily moving away from this standard to a national standard which uses clinical guidelines as the determinant of ordinary care. This is seen in the decision in the case of Nowatske v. Oserloh, where the court stated, "should customary medical practice fail to keep pace with development and advances in medical science, adherence to custom might constitute a failure to exercise ordinary care…" ([19])

Guidelines developed by the Agency for Healthcare Policy and Research, now the Agency for Healthcare Research and Quality ([1]), the American Pain Society, ([7]) the Healthcare Facilities Accreditation Program ([20]) as well as the Joint Commission on Accreditation of Healthcare Organizations ([21]) are good examples of sources the courts are using to determine ordinary practice. These guidelines do not support the use of placebo in any fashion except in approved research studies when the appropriate patient informed consent has been obtained. Therefore, the physician thus cannot justify the use of placebo for pain management by attempting to diagnose "addiction" or with support from any of the above regulatory agencies. ([5])
Furthermore, under California's elder abuse statute, ([22]) a physician was successfully sued by the deceased's family for inadequate pain management at the end of life. ([23])

III. Adverse Effects of Placebo Use

Pain is a universal experience and is subjective by nature. Despite the common colloquialism, "I feel your pain," no individual can truly experience another's pain. There are no laboratory tests or consistently reliable physical findings for assessment of pain. Patient self-report remains the gold standard for pain assessment. ([24]) Use of a placebo in place of an effective pain medication for attempting to determine whether the patient at end-of life is really in pain is under no circumstances appropriate.

There is a concern if a physician deceives the patient and substitutes a placebo treatment in the place of a known effective treatment without informing the patient. Deception has no place within the therapeutic relationship and is counter-productive. A physician may counsel a patient that “this treatment may be effective in treating your condition,” but evidence-based medicine cannot guarantee a treatment outcome.

In this era of informed consent, deception of the patient poses many problems, including erosion of the trust individuals and society as a whole have for physicians. There are methods of using placebos and the placebo effect that do not involve deceit, e.g., clinical trials or the use of placebo as one of the trial agents for neurolytic block. This one narrow exception uses the placebo trial as part of the treatment selection for neurolytic blockade, a highly specialized procedure performed by a few skilled pain management physicians with appropriate informed consent.

Substituting placebo for accepted forms of pain treatment is under-treatment of the condition. Under-treatment of pain, as detailed in the American Bar Association’s 2000 report, is an ongoing problem. ([25]) While there have been reports of placebo efficacy in pain management, placebo control of pain occurs in fewer patients and for shorter duration than active pain treatments. ([7, 26]) It has also been argued that the prescription of an ineffective placebo in place of effective pain medication can act as a “suicidogen,” whereby an individual in pain who is given inadequate medication for relief may be prompted to hasten his/her death. ([6]) In the clinical setting, substitution of a placebo for an active pain medication, even with the consent of the patient, is clinically suspect because better treatment alternatives exist and there are risks associated with the use of placebos. It is therefore inappropriate to substitute a placebo for a medication known to be effective in the treatment of a patient with the verified pain of a terminal illness.

Additionally, placebos are associated with side effects ([3]) and potentially precipitate hyperalgesia ([27]) or withdrawal in patients previously treated with pain medications.

IV. Summary

Exquisite management of end-of-life pain is a medical imperative. Use of a placebo in place of known effective pain medication for determining whether the patient is really in pain is under no circumstances appropriate. Use of placebos does not meet the accepted criteria to diagnose substance abuse, commonly referred to by some physicians as “addiction.” There is no medical justification for the use of placebos to assess or treat pain at end of life.

The only appropriate use of a placebo is in approved clinical research with informed consent.

ACTION TAKEN: Referred to the Bureau of Osteopathic Research and Public Health (BORPH)

DATE: July 20, 2024

SUBJECT: ABUSE OF PERFORMANCE ENHANCING SUBSTANCES AND PROCEDURES – SOURCE: H327-A19

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has provided amendments to provide clarity and updates to the policy, now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA): (1) supports efforts to eliminate the abuse of performance enhancing substances~~, known as doping,~~ for the purpose of enhancing athletic performance or physical appearance; (2) supports the efforts of ~~the United States Anti-Doping Agency (USADA) and its program in accordance with the World Anti-Doping agency (WADA) code and the WADA International Standards (IST)~~ **APPROPRIATE NATIONAL AND INTERNATIONAL REGULATORY BODIES** to protect clean athletes and ensure their rights to compete on a fair and level playing field, free from the pressures of performance enhancing drugs; and (3) **SUPPORTS THE** ~~encourages~~ education of athletes, the public and physicians of the dangers of these substances.

Background Information: Provided by AOA Staff

Current AOA Policy: As noted above (1989; 1994 Reaffirmed as Amended; 1999 Reaffirmed; 2004 Reaffirmed as Amended; 2009 Reaffirmed as Amended; 2014 Reaffirmed as Amended; 2019 Reaffirmed)

Prior HOD action on similar or same topic: As noted above.

Human Cloning White Paper

Policy Statement

The American Osteopathic Association has adopted the following white paper:

White Paper – Human Cloning

BACKGROUND

Somatic cell nuclear transfer (SCNT) or, to use the more common vernacular, cloning is the process of creating genetic duplication of a cell or an organism naturally or artificially.[1,2,3] The National Institute of Health (NIH) describes “cloning” as a process “that can be used to produce genetically identical copies of a biological entity”.[4] More specifically, the National Human Genome Research Institute (NHGRI) of NIH, identifies three categories of artificial cloning: gene, reproductive and therapeutic. The latter two types of cloning are often lumped together as “human cloning,” which is controversial and the focus of much debate.

TYPES OF CLONING

Gene Cloning

Gene cloning (also known as DNA cloning or molecular cloning) is the process wherein genes or segments of DNA are copied. DNA cloning is beneficial to medicine because the technology allows doctors to treat patients by replacing flawed genes associated with inherited diseases with healthy ones. Gene cloning is primarily seen in genetically engineered food and in animals to help them grow stronger. This type of cloning does not have the possibility of creating an adult living creature.

Reproductive Cloning

Reproductive cloning is the process of using SCNT to obtain eggs that could develop into an adult living creature. The mature somatic cell is transferred into another egg cell and allowed to develop into an embryo in a test-tube and then implanted into the womb of a living creature. The hope is that the outcome will be a birth with the same genetic makeup as the living creature from which the mature somatic cell was taken.

Reproductive cloning experimentation has been occurring for many decades but has primarily focused on animals as opposed to human beings. In 1979, mice were cloned by splitting mouse embryos. In 1996, the lamb, Dolly was successfully cloned. In 1998, several calves were cloned. Another notable cloning of a mammal was in 2003, when an endangered ox, Banteg, was cloned. **A RECENT ANNOUNCEMENT WAS MADE IN JANUARY 2024 OF THE SUCCESSFUL CLONING OF A RHESUS MONKEY IN CHINA IN 2020.[5]** While there have been a few successfully cloned mammals, there have been no verified successful attempts to clone a human embryo/being.

Therapeutic (Research) Cloning

Therapeutic cloning is the process of creating a cloned embryo in an effort to produce embryonic stem cells to help understand the epidemiology of diseases and to develop new treatments.[4,~~5~~ **6**] Therapeutic cloning involves some of the same techniques used in reproductive cloning. However, the stem cells are harvested from the embryo during the test tube phase, therein destroying the embryo.

ARGUMENTS FOR OR AGAINST CLONING

In the United States and worldwide, cloning remains a moral and ethical point of consternation. There are arguments both for and against the use of cloning, but there appears to be a consensus amongst many that cloning an actual human being is not acceptable.[~~5,6~~ **6,7,8**] Therapeutic cloning is often the center of most debates for many regarding balancing patient care, morals and ethics.

Arguments against therapeutic and reproductive cloning[~~6~~ **8**]:

- Reproductive and therapeutic cloning leads to the destruction of human embryos which many see as viable human life.

- Reproductive cloning usurps the divine plan or interferes with the natural order.

- Cloning violates human dignity and treats human beings as commodities or items to be manufactured.

- Cloning causes risks to human health; the majority of implanted embryos die in gestation or result in births with significant abnormalities. In addition, the need for human embryos may cause women in poverty to compromise health due to incentives to sell embryos.

Arguments for therapeutic and reproductive cloning[6] [8]:

- Reproductive and therapeutic cloning presents a unique ability to research and identify treatments to address human diseases by providing insight to researchers on developmental and pathogenic events not discoverable otherwise.

- Cloning may lead to alleviation of human suffering and cures for costly and debilitating diseases by providing genetically matched tissue for transplantation.

- Cloning promotes scientific inquiry.

LEGISLATION IN THE U.S. ON CLONING

Currently, the federal government does not explicitly prohibit cloning. However, the government does prohibit the use of federal funds for cloning, regardless of the purpose (therapeutic or reproductive cloning). [6,7] [8,9,10] The NIH primarily conducts gene cloning. NIH relies on federal funding which is prohibited from being used in therapeutic or reproductive cloning activities, and accordingly, NIH researchers have not cloned any mammals nor have any of the institutions or centers supported human cloning activities.

The Food and Drug Administration (FDA) has weighed in on human reproductive cloning. In a 1998 letter about human cloning, the FDA claimed jurisdiction over clinical research using cloning technology for reproductive purposes. The FDA equated using cloning technology to the same process as developing new drugs.[8] [11] In a second letter dated March 28, 2001, regarding Cloning Technology, the agency reiterated its jurisdiction over clinical research using such technology. The FDA explicitly stated that the process is subject to the Health Service Act and the Federal Food, Drug and Cosmetic Act. also indicated that all approval responsibilities for any human clinical use of any therapies derived from cloning research fell within its purview.[9] [12]

In an effort to address the void left by the federal government, several state legislatures have provided guidance on human cloning.[7] [9]

- **Eight (8) states** prohibit human cloning for any purpose – no reproductive or therapeutic cloning (cloned human embryos for embryonic stem cell research as well as to implant in a uterus for childbirth) – Arizona, Arkansas, Indiana, North Dakota, Oklahoma, South Dakota and Virginia

- **Six (6) states** prohibit state funding of human cloning for any purpose – Arizona, Arkansas[10], Indiana, Louisiana, Maine and Nebraska

- **Ten (10) states** have “clone and kill” laws which allow therapeutic cloning research, but prohibit cloning of embryos to be implanted for childbirth (reproductive cloning) – California, Connecticut, Illinois, Iowa, Maryland, Massachusetts, Missouri, Montana, New Jersey and Rhode Island

- **Five (5) states** allow state funding for embryonic stem cell research (therapeutic cloning or in vitro fertilization) – California, Illinois, Missouri, Maryland and New York

- **Two (2) states** have legislation that precludes health professionals from being compelled to participate in human cloning (healthcare rights of conscience laws) – Idaho and Louisiana

Twenty-six (26) states and the District of Columbia do not have any legislation addressing therapeutic (biomedical research) and/or reproductive (to produce children) cloning. ~~These data were pulled from sources dated between 2015 through 2019. To the best of BSAPH's knowledge, these policies remain in effect as of May 1, 2019.~~ **SINCE 2019 THERE HAS BEEN LITTLE LEGISLATION ACTIVITY AT THE STATE AND FEDERAL LEVEL.**

KEY ORGANIZATIONS SUPPORTING THERAPEUTIC/RESEARCH CLONING

Many key organizations have made position statements regarding the benefits it views in therapeutic cloning and accordingly expressed their support. In addition, these organizations have declined to support cloning for reproductive purposes. These organizations include:

American Association for the Advancement of Science (AAAS) – The AAAS has a statement on Human Cloning that states it endorses a legally enforceable ban on efforts to implant a human cloned embryo for the purpose of reproduction.[11] AAAS recognizes that the health risks associated with reproductive cloning make such cloning unconscionable. The AAAS, however, does encourage continued dialogue as new technological advances emerge.

Also, AAAS supports stem cell research (genetic and therapeutic cloning) which has potential health benefits. The AAAS calls for strict monitoring of the process and developments and appropriate oversight through regulation. [11]

~~***American Association of Medical Colleges (AAMC)*** – On its website under the Advocacy section, the AAMC expressly supports ongoing research into SCNT and endorses legislation that would allow therapeutic/research cloning.[12] Additionally, the AAMC recommends a ban on all forms of reproductive cloning.~~

~~***American Bar Association (ABA)*** - The ABA addressed this issue in 2002 and 2004. ABA supports law and policy prohibiting reproductive cloning. [13,14]~~

American Medical Association (AMA) - The AMA does not endorse reproductive cloning. However, if in the future reproductive cloning is permitted, the AMA acknowledges that physicians must be educated and understand somatic cell donors must provide informed consent. Additionally, any child produced through reproductive cloning is recognized as a human-being. Code of Medical Ethics Opinion 4.2.6.[15]

The AMA says physicians can determine whether they will participate in stem cell research or use its products. The AMA implores clinician researchers to be able to articulate the risks and benefits of embryonic stem cell use for research purposes. In addition, AMA

encourages physicians to allow their commitment to the welfare of patients to guide them in their professional standards. Code of Medical Ethics Opinion 7.3.**8**[16]

National Academies of Medicine, Sciences and Engineering (National Academies) - The National Academies, based on recommendations generated by 2002 joint panel, recommends a legally enforceable ban on the practice of human reproductive cloning, but does support using SCNT to produce stem cells for developing new medical therapies for life-threatening diseases and advancing knowledge.[17]

AOA AND HUMAN CLONING

The osteopathic community and the AOA have discussed this issue at length since 1998. Recognizing the moral and ethical dilemmas of human cloning, AOA has continued to monitor the issue and provide updates to its constituents in order to facilitate a discussion.

After reviewing the existing literature on cloning, the American Osteopathic Association (AOA) adopts the following policies:

1. The AOA does not endorse the practice of human cloning for purposes of reproduction (efforts to implant a human cloned embryo for the purpose of reproduction).
2. The AOA recognizes the benefits and harms of human cloning for therapeutic (research) purposes with respect to embryos, donors and patients suffering from debilitating and life-threatening diseases and conditions. Physicians shall have the autonomy to determine whether or not they will participate in therapeutic cloning. They should carefully weigh all ethical and moral aspects of the process and determine what is best for the well-being of patients, society as a whole, and the advancement of medical knowledge and practice.
3. The AOA shall review its policy in light of any new evidence that will be generated by research entities as well as monitor state and federal legislation in the field and update the policy as necessary.

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

Osteopathic Manipulative Treatment (OMT) of the Cervical Spine

Policy Statement

The American Osteopathic Association, in the hopes of advancing the science of osteopathic medicine adopts the following position:

These recommendations are provided for osteopathic educators and physicians making decisions regarding the instruction of cervical spinal manipulation and the care of patients. As such, they cannot substitute for the individual judgment brought to each clinical situation by a patient's physician. Like all reference resources, they reflect the best understanding of the science of medicine at the time of publication, but they should be used with the understanding that continued research is needed.

AMERICAN OSTEOPATHIC ASSOCIATION OSTEOPATHIC MANIPULATIVE TREATMENT OF THE CERVICAL SPINE

Background and Statement of Issue

Treating chronic pain continues to be an important health issue for osteopathic physicians. ~~Chronic pain affects over **50**-100 million Americans over the age of 18~~

~~and negatively impacts their quality of life.[1]~~ **GLOBALLY, IN 2020, NECK PAIN AFFECTED 203 MILLION PEOPLE.** ~~In addition, it costs $600 billion a year in healthcare costs and loss of productivity.[1]~~ **AS OF 2016, LOW BACK AND NECK PAIN HAD THE HIGHEST AMOUNT OF HEALTH CARE SPENDING IN THE U.S. WITH AN ESTIMATED $134.5 BILLION IN SPENDING**. Back and neck pain are two leading causes of chronic pain and they are amongst the leading causes of people living with disabilities in the United States (U.S.) as well as worldwide. More specifically, back and neck pain are ranked in the top 8 diseases and injuries in the U.S. regarding years lived with disability (YLDs) and in the top 6 globally.[2,3] Cervical spine manipulation is one option for treating back and neck pain.

Concerns continue to arise regarding the safety of cervical spine manipulation. Specifically, concerns center on the potential development of serious adverse events such as stroke and cervical artery dissection after spinal manipulation. Since spinal manipulation is an option available to osteopathic physicians to incorporate into the care of their patients, it is important to examine these concerns and develop a position on the issue. This paper will present the evidence behind the benefit of cervical spine manipulation, explore the potential harms, and make a recommendation about its use.

Benefit

Spinal manipulation has been reviewed in various systematic reviews and meta-analyses over the past three decades. The majority of the studies conducted on spinal manipulation focus on low back pain for which the evidence has shown spinal manipulation has clear benefits.[4-8] For neck pain, however, there are fewer studies and the findings vary, but there is ~~some~~ evidence ~~that conclude~~ **CONCLUDING THAT** spinal manipulation benefit~~s~~ patients **WHO** present~~ing~~ with neck pain.[9-14] This evidence indicates that the benefits of spinal manipulation include relief of acute neck pain, and reduction in neck pain as measured by validated instruments in sub-acute and chronic neck pain compared with muscle relaxants or usual medical care.[14-18] Bronfort et al specifically concluded that for patients with chronic neck pain, there is moderate evidence that (1) manipulation and mobilization are superior to general practitioner management in the short term, (2) high-technology exercise results in more pain improvement than manipulation in the long term for a mix of patients with acute and chronic pain, and (3) mobilization is superior to physical therapy and general medical care and similar to manipulation in both the short and long term.[16]

Benefits of spinal manipulation for areas beyond the low back and neck include short-term relief from tension-type headaches, **TEMPOROMANDIBULAR JOINT DISORDERS AND SHOULDER PAIN**.[8,15,19] **ADDITIONALLY**, ~~M~~manipulation ~~relieves~~ **FOR** cervicogenic headache ~~and~~ is comparable to commonly used first line ~~prophylactic~~ **PREVENTATIVE** prescription medications for tension-type headache and migraine.[16]

RISK ~~Harm~~

~~Overall~~

The literature presents varying conclusions on the harms of spinal manipulative treatment (SMT).[6,7] In a 2017 review of risks associated with spinal manipulation, 46% percent of the studies reviewed found spinal manipulation to be safe, 42% percent were neutral (did not find harm/benefit); and the remaining 12% percent concluded that spinal manipulation was unsafe because of the possibility of serious adverse events.[7] Nevertheless, the existence of any adverse effect should not be trivialized.

Studies have noted that there are two types of adverse effects as a result of SMT. The first type ~~is~~ ARE considered ~~to be~~ mild adverse events that are short-term and non-serious such as dizziness, fatigue, and muscle soreness/ discomfort.[7,20] **WHEN PRESENT** ~~T~~these side effects occur in 23-83% of patients. The second type of adverse events is more serious and includes cervical artery dissection, stroke, spinal cord injuries, and other serious conditions outcomes related to vertebrobasilar accidents (VBAs). Currently, much of the literature discusses vertebrobasilar insufficiency or vertebrobasilar ischemia (VBI) which is a type of VBA and is often determined to be the link to the more serious adverse events. Nonetheless, serious adverse events are seen as a rarity, and it is estimated that they occur in the range of **ONE IN** every 20,000 to 250,000,000 manipulation**S** performed.[7,13,20-28]

Most of the reported cases of adverse outcomes have involved thrust or High Velocity/Low Amplitude (HVLA) types of manipulative treatment.[20,26] Unfortunately, many of the reported cases do not distinguish the type of manipulative treatment provided.

VERTEBROBASILAR ACCIDENTS ~~VBAs~~

VERTEBROBASILAR ACCIDENTS (VBA) account for 1.3 in 1000 cases of stroke, making them a rare event. Approximately 5% of patients with a VBA die as a result, while 75% have a good functional recovery.[29] The most common risk factors for VBAs are migraine, hypertension, oral contraceptive use and smoking.[30] Elevated homocysteine levels, which have been implicated in cardiovascular disease, may be a risk factor for a VBA.[31] **THE MORE RISK FACTORS THAT AN INDIVIDUAL HAS, THE MORE LIKELY THEY ARE TO SUSTAIN A VBA.[32]**

The risk of a VBA occurring spontaneously, is nearly twice the risk of a VBA resulting from cervical spine manipulation.[15] A study done in 1999 reviewing 367 cases of VBA reported from 1966-1993 showed 115 cases related to cervical spine manipulation; 167 were spontaneous, 58 from trivial trauma and 37 from major trauma.[33]

A study in 2002 conducted by Haldeman et al., reported that a VBA following cervical spine manipulation was unpredictable.[25] The authors, however, concluded that a VBA following cervical spine manipulation was “idiosyncratic and rare”. Further review of the data showed that 25% of the cases presented with sudden onset of new and unusual headache and neck pain often associated with other neurologic symptoms that may have represented a dissection in progress.[34]

Complications from cervical spine manipulation most often occur in patients who have had prior manipulation uneventfully and without obvious risk factors for a VBA.[15] “Most vertebrobasilar artery dissections occur in the absence of cervical manipulation, either spontaneously or after trivial trauma or common daily movements of the neck, such as backing out of the driveway, painting the ceiling, playing tennis, sneezing, or engaging in yoga exercises.”[25] In some cases manipulation may not be the primary culprit for causing the dissection, but an aggravating factor or coincidental event.[34]

It has been proposed that thrust techniques that use a combination of hyperextension, rotation and traction of the upper cervical spine will place the patient at greatest risk of injuring the vertebral artery. In a retrospective review of 64 medical legal cases, information on the type of manipulation was available in 39 (61%) of the cases. Fifty-one percent (51%) involved rotation, with the remaining 49% representing a variety of positions including lateral flexion, traction and isolated cases of non-force or neutral position thrusts. Only 15% reported any form of extension.[34]

Cervical Artery Dissection (CAD)

CAD occurs at a rate of 2.9 per 100,000 individuals every year in the general population, and a large majority (89%) of the individuals diagnosed with CAD have no symptoms or no significant disability that prohibits them from being productive within the following three months of the event.[32] Among those with symptoms, headaches and neck pain are the predominant symptoms for CAD. This creates a dilemma for physicians because cervical spine manipulation is often sought to treat these medical issues. Thus, it is difficult to determine if manipulation causes CAD or if CAD existed at the time of treatment.

Limitations of Studies and Concerns with Pre-manipulation Screening

Due to the design of studies (case reports or retrospective surveys), infrequent reporting of adverse events, and the rare occurrence of many of the more serious complications, it is difficult to determine a causal relationship between SMT and the serious adverse effect.[7,32] Thus the lingering question of whether or not pre-existing pathologies may have existed prior to the patient receiving SMT remains.[20,27,35]

In Malone et al., the authors reported that cervical spine manipulation may worsen preexisting cervical disc herniation or even cause cervical disc herniation.[27] This report describes complications such as radiculopathy, myelopathy, and vertebral

artery compression by a lateral cervical disc herniation. The incidence of these types of complications could be lessened by rigorous adherence to published exclusion criteria for cervical spine manipulation.[27,36]

Another noteworthy point to highlight is that the literature does not clearly distinguish the type of provider (i.e. M.D., D.O., D.C. or P.T.) or manipulative treatment (manipulation vs. mobilization) provided in cases associated with serious adverse effects. This information may help to understand the mechanism of injury leading to serious adverse effects, as there are differences in education and practice among the various professions that utilize this type of treatment. It is duly noted that the osteopathic approach strictly limits the “thrust”, which is more commonly referred to as “impulse” in osteopathic practicums, to the physiologic barrier as opposed to the chiropractic approach may extend to the paraphysiologic space.

Additionally, pre-manipulation screening tools, that might be used to identify a patient’s risk for VBA and cervical artery dissection have been widely criticized because they have been found to be unreliable and difficult to validate.[29,30,37-44] These studies have examined the **WALLENBERG AND** DeKleyn’s test and others like it and determined the tests are unreliable for demonstrating reproducibility of ischemia or risk of injuring the vertebral artery.[37-45] **THERE IS ACKNOWLEDGEMENT THAT FURTHER RESEARCH SHOULD BE COMPLETED TO ASSESS THE RELIABILITY OF THESE TESTS FOR VALIDITY.[45]** For this reason, researchers and groups such as the Bone and Joint Decade Task Force on Neck Pain and Its Associated Disorders recommend that all health care providers conduct a thorough patient history, physical examination and patient self-assessment to rule out certain pre-existing conditions.[14,46]

Alternative Treatments

PHARMACOLOGIC

Non-steroidal anti-inflammatory drugs (NSAIDs)

NSAIDS such as ibuprofen and aspirin are the ~~most commonly prescribed~~ **FIRST LINE** medications for neck pain. More than 30 million people worldwide use NSAIDs regularly.[47] In fact, 5% of all medical visit outcomes in the U.S. include a prescription for NSAIDS.[48] NSAIDs offer temporary relief, but long-term use, gender, age, strength of dose as well as consumption of multiple medications simultaneously may be associated with serious risks affecting the gastrointestinal (GI), renal and cardiovascular systems.[49,50] Eighty-one percent (81%) of GI bleeds related to NSAID use occur without prior symptoms.[51] Research in the United Kingdom has shown NSAIDs will cause 12,000 emergency admissions and 2,500 deaths per year due to GI tract complications.[31] The annual cost of GI tract complications in the U.S. is estimated at $3.9 billion, with up to 103,000 hospitalizations and at least 16,500 deaths per year therein making GI toxicity from NSAIDs the 15th most common cause of death in the United States.[51-53] **SECOND**

LINE PHARMACOLOGIC INTERVENTION INCLUDES THE USE OF A SHORT COURSE OF MUSCLE RELAXERS SUCH AS CYCLOBENZAPRINE OR TIZANIDINE.[54] NERVOUS SYSTEM INTERACTIONS INCLUDING SEDATION AND DIZZINESS MAY BE ASSOCIATED WITH THE USE OF THESE MEDICATIONS. ADDITIONALLY, THERE ARE MANY DRUG-DRUG INTERACTIONS AND HEPATIC/RENAL FUNCTION SHOULD BE CONSIDERED WHEN PRESCRIBING.[55]

INTERVENTIONAL ~~Epidural steroid injections~~

TRIGGER POINTS ARE DEFINED AS "DISCRETE, FOCAL, HYPERIRRITABLE SPOTS" WHICH ARE OFTEN TREATED WITH THE USE OF POINT INJECTIONS (TPIS). THE LITERATURE INDICATES THAT THE USE OF TRIGGER POINT INJECTIONS IS ASSOCIATED WITH DECREASED SUBJECTIVE PAIN INTENSITY AND IMPROVED RANGE OF MOTION FOR NECK PAIN SUFFERERS. OFTEN LOCAL ANESTHETIC MEDICATIONS ARE USED FOR TPIS WHICH ARE COMPOSED OF ONE LONG AND ONE SHORT ACTING ANESTHETIC. TRIGGER POINT INJECTIONS ARE NOT INTENDED FOR LONG TERM USE. SOME OF THE IMMEDIATE COMPLICATIONS INCLUDE VASOVAGAL SYNCOPE, INFECTION AT THE INJECTION SITE, PNEUMOTHORAX, NEEDLE BREAKAGE, HEMATOMA FORMATION AND DAMAGE TO SURROUNDING STRUCTURES.[56] MORE SERIOUS COMPLICATIONS INCLUDE ACCIDENTAL INTRAVASCULAR INJECTION OF THE TPI WHICH HAVE A THEORETICAL RISK OF CARDIOVASCULAR AND NEUROTOXICITY. NERVE BLOCKS HAVE AN INCIDENCE OF INTRAVASCULAR NEEDLE ENTRANCE BETWEEN 14-23% OF THE TIME.[57]

Epidural steroid injections (ESIs) are a popular treatment for neck pain.[52] Complications **FROM** ~~to~~ ESIs generally occur because of needle placement or drug administration. Common risks associated with needle placement include subdural injection, intrathecal injection and intravascular injection. Subdural injection occurs in ~ 1% of procedures, intrathecal injection occurs in ~ 0.6-10.9% of procedures, and intravascular injection, the most significant risk, occurs in ~ 2% of procedures.[53] Other risks include cervical epidural abscess, dural puncture, spinal cord trauma, infection, hematoma, nerve damage, vascular injury and cerebral vascular or pulmonary embolus.[58,59] Complications that may arise from drug administration include osteoporosis, Cushing's syndrome, avascular necrosis of bone, and steroid myopathy. While complications due to needle placement or administration of steroids are rare, they have been reported in the literature.[58,59]

Conclusion

Osteopathic manipulative treatment of the cervical spine, including but not limited to HVLA treatment, is effective for low back and neck pain and is safe. Because of the rarity of serious adverse events, trainees and practicing physicians should be

provided with sufficient information so they are advised of the potential risks and able to communicate the potential risks to their patients. Prior to recommending cervical spine manipulations, physicians should conduct a thorough patient exam and medical history review to try to identify any preexisting conditions that may indicate the patient is at risk for a serious adverse event. **KNOWLEDGE OF ABSOLUTE AND RELATIVE CONTRAINDICATIONS IS IMPORTANT TO AVOID COMPLICATIONS ASSOCIATED WITH CERVICAL MANIPULATION, TESTING FOR VERTEBRAL ARTERY INSUFFICIENCY IN HIGHER RISK PATIENTS COULD BE CONSIDERED AS WELL.** Additionally, it is recognized that there is a need for research to distinguish the risk of VBA and CAD associated with manipulation done by specific provider types as well as research to determine the nature of the relationship between the different types of manipulative treatment and VBA and CAD.

It is the position of the American Osteopathic Association that all modalities of osteopathic manipulative treatment of the cervical spine, including HVLA, should continue to be taught at all levels of education, and that osteopathic physicians should continue to offer this form of treatment to their patients. Physicians should use a combination of medical history reviews and physical exams, diagnostic studies, and best judgment to determine if a patient has any pre-existing conditions that place the patient at risk of suffering a serious adverse event.

~~Special Acknowledgements~~

~~In crafting the updated Position Statement, the Bureau of Osteopathic would like to thank the Osteopathic Manipulation Medicine and Osteopathic Manipulative Treatment (OMM/OMT) Research Task Force for its input, and a special thank you to Hollis King, DO, PhD, who served as an outside contributor.~~

SUBJECT: STATE GRADUATE MEDICAL EDUCATION (GME) FUNDING ALTERNATIVES – SOURCE: H359-A/19

SUBMITTED BY: Council on State Health Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant but requires updating to reflect recent changes at the state level; now, therefore be it

RESOLVED, that the Council On State Health Affairs recommends that the following policy be REAFFIRMED AS AMENDED.

State Graduate Medical Education Funding Alternatives

Policy Statement

INTRODUCTION

The following ~~policy~~ **WHITE** paper and the recommendations provided within are approved to assist the American Osteopathic Association (AOA) in responding to policy proposals aimed at funding graduate medical education (GME) at the state-level; the AOA will work with the osteopathic community to encourage and support state-level GME funding initiatives that encompass the principles outlined within this paper.

WHITE PAPER—STATE GRADUATE MEDICAL EDUCATION FUNDING

BACKGROUND

Physician training requires students to attend four years of medical school, usually paying those costs out-of-pocket or through loans. Following successful completion of medical school, their training continues as medical residents. Medical residents see and treat patients under the supervision of more experienced physicians. This training usually takes place in hospitals though residents often rotate to ambulatory sites such as clinics and physician offices. On average, this residency training takes four years to complete, although highly specialized fields may require longer training.

By and large, overall funding for graduate medical education (GME) comes from patient care revenues.[1] However, the federal government is currently the largest single funder of GME, providing approximately $1**6**~~5~~.**2**~~9~~ billion in funding through the Centers for Medicare and Medicaid Services (CMS) in 20**20**~~18~~.[2] ~~Nearly two-thirds of this funding comes from Medicare, with the majority of the remainder funded through medicaid.[3]~~ Additional fund**S**~~ing~~ ~~is~~**ARE** provided by the Department of Defense, the Department of Veterans Affairs and the **HEALTH RESOURCES AND SERVICES ADMINISTRATION**~~U.S. Public Health Service~~.[~~4~~**3**] In providing Medicare funding, **CONGRESS HAS ACKNOWLEDGED THAT TRAINING PHYSICIANS IS A PUBLIC GOOD. DESPITE THAT ACKNOWLEDGEMENT, AND PASSAGE OF FEDERAL LEGISLATION IN 2020 TO SUPPORT 1,000 ADDITIONAL GME SLOTS, FEDERAL SPENDING CONTINUES TO FALL SHORT OF THE AMOUNT NEEDED TO ADEQUATELY ADDRESS A NATIONWIDE PHYSICIAN SHORTAGE THAT IS PROJECTED TO REACH UP TO 139,000 BY 2033.[4] THIS PAPER CONSIDERS ALTERNATIVE FUNDING MECHANISMS THAT STATES CAN IMPLEMENT TO HELP FILL THE PROJECTED GAP IN THE PHYSICIAN WORKFORCE.** ~~there have been periodic calls to remove GME from Medicare and Medicaid and secure other sources of funding. So far, Congress has neither acted on these recommendations nor have other entities stepped up to assume a greater share of the financial responsibility (relative to Medicare or Medicaid) for physician training.~~

~~With CAPS on the federal budget, GME funding has been and will continue to be relatively flat. additionally, the Trump Administration has supported both consolidation and reduction of GME funding as part of a comprehensive approach to reducing overall federal spending.[5] Additionally, in December 2018, the congressional budget office issued recommendations to consolidate and reduce federal payments for GME at teaching hospitals.[6] Conversely, medical schools, hospitals and medical associations see a need to increase funding and residency slots to help train physicians and fill projected workforce shortages and are working at both the state and federal levels to achieve increased funding for GME.~~

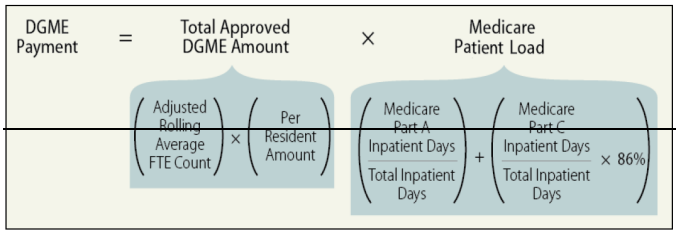
There are two mechanisms through which Medicare and Medicaid distribute GME funding: Direct Medical Education (DME) and Indirect Medical Education (IME) payments. DME payments are based on resident salaries, supervision and other educational costs. IME payments are based on additional operating costs of a hospital with a GME program. One of the greatest obstacles to federal GME funding is the Balanced Budget Act of 1997 which limited the number of allopathic and osteopathic residents a hospital can count for purposes of DME and IME payment.[**5**] The law also reduced the IME multiplier over a four-year period, however, the Balanced Budget Refinement Act of 1999 and the Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act of 2000 delayed the IME reduction. Additionally, the Budget Control Act of 2011 enacted a series of automatic budget cuts that included a 2% cut for IME payments which took effect on April 1, 2013.[~~7~~**6**]

MEDICARE

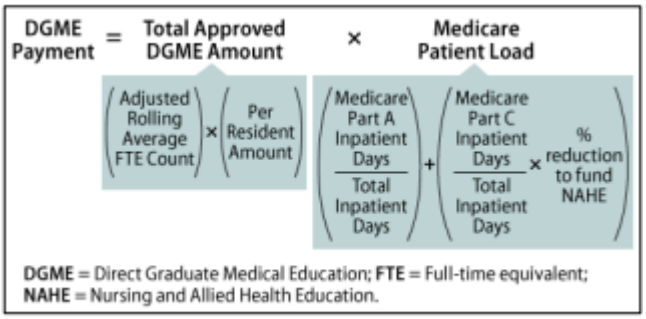
The formula for determining Medicare payments to hospitals for direct costs of approved GME programs is established in section 1886(h) of the Social Security Act.[~~9~~**7**] A DME payment is determined by multiplying a hospital-specific, base-period per resident amount by the weighted number of full-time equivalent residents working in all areas of the hospital

and the hospital's Medicare share of total inpatient days.[~~10~~8] The Affordable Care Act amended section 1886(h)(4)(E) to allow a hospital to count residents training in non-hospital settings if the residents are engaged in patient care activities and if the hospital incurs the costs of the stipends and fringe benefits of the resident during the time residents spend in that setting.[~~11~~9]

Figure 1. Medicare DGME Payment Formula



Source: CRS analysis of Title XVIII of the Social Security Act (SSA) and relevant regulations.
Note: The adjusted rolling average FTE count is subject to the GME cap.



Source: CRS analysis of 42 U.S.C. §1395ww(h)(3) and 42 C.F.R. §413.75-88.

As previously mentioned, IME payments are based on additional operating costs of a GME program. The factors for IME payment generally include sicker/more complex patients, maintaining stand-by capacity for certain specialized services (e.g., burn units), residents ordering more tests and trainees being less efficient in providing care. IME payments provide for the legitimate increase in costs training hospitals incur.[~~12~~10] IME payments are calculated by adding the individual intern/resident-to-bed ratio into a formula already established in the Medicare statute. The current IME adjustment is calculated using a multiplier set at 1.35, which means that a teaching hospital will receive an increase of approximately 5.5% in Medicare payments for every 10-resident increase per 100 beds.[11]

MEDICAID

~~Despite federal law not requiring state Medicaid programs to support GME,~~ **AFTER MEDICARE,** Medicaid is the second largest funder of GME programs. A majority of states have implemented mechanisms within their Medicaid programs to supplement federal funding of GME. In most cases, Medicaid GME funding is structured similarly to Medicare, providing direct and indirect payments. The most recent data available estimates that Medicaid paid Approximately $**7.39**~~4.3~~ billion to GME programs in 20**22**~~15~~, up from $3.87 in 2012.[~~13, 14~~12] ~~Despite the fact that much of that funding came from matching federal payments, three states reported that they explicitly reduced their Medicaid spending on GME, and another seven reported at least a ten percent reduction in Medicaid GME payments between 2012 and 2015.~~[~~15~~]

In 20**22**~~05~~, ~~47~~ **44** states provided **AN ADDITIONAL** $**7.39**~~18~~ billion through Medicaid to support GME.[13~~6~~ ~~18, 19~~] **OF THOSE STATES, TWENTY-FOUR ACKNOWLEDGED AND FUNDED BOTH DME AND IME COSTS, ELEVEN ONLY ACKNOWLEDGED AND FUNDED DME COSTS AND TEN DID NOT DIFFERENTIATE BETWEEN DME AND IME COSTS IN SOME OR ALL OF THEIR MEDICAID GME PAYMENTS.**[14]

Medicaid Fee-for-Service

Forty-**ONE** states and the District of Columbia make DME and/or IME payments under the Medicaid fee-for-service program.[15] A fee-for-service program is a payment model where services are unbundled and paid for separately.[16][20] ~~Fourteen~~**SIXTEEN** states and DC fund DME and/or IME programs using a calculation method similar to Medicare's GME funding formula, sometimes in addition to other methods which usually include variations of a per-resident or lump-sum amount. The per-resident or lump-sum amounts are based on the "hospital's share of total Medicaid revenues, costs or patient volumes." ~~Twenty-nine~~**TEN** states reported calculating payments ~~solely~~ by **A DIFFERENT METHOD**.[17] ~~"some other method" in 2015.~~[21]

Medicaid Managed Care

Capitated managed care is a state's use of risk-based capitation payments within their Medicaid program. This typically includes contracting with one or multiple managed care organizations (MCOs) to administer the Medicaid program for a defined population of Medicaid patients.[18][22] Thirty-nine states and DC use capitated Medicaid managed care programs.

Sixteen states and DC directly pay teaching hospitals or other teaching programs under Medicaid for DME and/or IME payments. [19][23] This represents an increase in the number of states who have made direct payments under managed care since 2012.[20][24] States who make direct Medicaid payments indicate that they wish to help train future physicians who will service Medicaid beneficiaries and that using Medicaid funds to fund GME programs will help advance state health policy goals.

Twelve states recognize and include Medicaid DME and/or IME payments in their capitated payment rates to managed care organizations, and **THREE STATES USE BOTH FORMS OF DISTRIBUTION**.[21] ~~Half of these states – Iowa, Kansas, Kentucky, Michigan, Minnesota, and Mississippi – require MCOs to distribute the negotiated payments to teaching hospitals. The other six assume MCOs will distribute the payments.~~[25]

ALIGNING GME FUNDING WITH HEALTH POLICY PRIORITIES

SOME S~~s~~tates continue to look to align GME funding with other health policy goals. This can include increased funding for training in certain specialties, addressing workforce shortages in rural and underserved areas and increasing faculty positions to train new physicians.[22] ~~A 2016 study revealed that thirty-two states linked Medicaid GME payments to a state policy goal of increasing the size of the physician workforce, compared to 22 states in 2012.~~[26]

Florida and Kansas

FLORIDA AND KANSAS ARE TWO EXAMPLES OF STATES THAT LINK MEDICAID GME PAYMENTS TO STATED POLICY GOALS,~~. I~~in an effort to promote accountability in the use of GME funds.~~, Florida and Kansas link Medicaid GME payments to stated state~~

~~policy goals. In Florida~~ **T**~~t~~his applies to both **THEIR** fee-for-service (FFS) and managed care Medicaid programs, ~~while Kansas focuses solely on FFS payments.[27] Like most states, Florida and Kansas have~~ **AND** focuse**S**~~d~~ on encouraging training in primary care specialties and increasing access to care in rural and medically underserved areas.[23]

Kansas also uses GME payments to **FUND TEACHING HOSPITALS AS WELL AS TEACHING SITES IN NON-HOSPITAL SETTINGS, AND** promote an increased supply of physicians serving the Medicaid population~~., and funds teaching hospitals as well as teaching sites in non-hospital settings~~. In Florida, GME payments have been extended to individual teaching physicians under FFS. The State also uses alternative sources to fund residency programs in addition to Medicaid and Medicare, including the statewide Medicaid residency program and the graduate medical education startup bonus program.[24~~8~~] The former was created in 2013 with $80 million in recurring state and matching federal funds to support payments to hospitals with accredited residency programs, while the latter was created in 2015 with $100 million allocated to educating and training physicians in specialties which are in a statewide deficit. In 20**22**~~18~~, the Florida legislature appropriated $2**91.64**~~2.3~~ million to these programs. [25~~9~~]

Texas

In 2014, the Texas legislature allocated $12 million to several initiatives which together created 100 new residency positions across nine new primary care and two non-primary care programs.[26~~30~~] In 2015, the legislature consolidated these initiatives into a single GME expansion program, to which it appropriated $49.5 **MILLION** biennially. **THIS FUNDING HAS ENABLED THE ESTABLISHMENT OF 472 ADDITIONAL FIRST-YEAR RESIDENCY POSITIONS BETWEEN 2014 AND 2021**.[27] ~~This~~ **FUNDING FOR THE GME EXPANSION PROGRAM WAS FURTHER EXTENDED DURING THE 2022-2023 FISCAL YEAR, WITH A BIENNIAL ALLOCATION OF $199.1 MILLION.**[28, 29] ~~resulted in an increase in per-resident funding from $65,000 to $75,000 per year and the creation of 130 new residency positions in 2016-2017.[31]~~

Since 2009, the Texas Health and Human Services Commission (HHSC) has also provided supplemental funding to five state-owned teaching hospitals for approved medical residency training programs. The HHSC reimburses each hospital directly using a calculation that is based upon the hospital's self-reported Medicaid inpatient days and resident full-time equivalents. HHSC also separately provides IME payments to teaching hospitals to offset their higher patient care costs relative to non-teaching hospitals, including costs related to supervising and maintaining resident records.[30~~3~~]

~~These increases follow years of cuts to GME funding, including a 50% cut in 2012-2013, which led to the elimination of the Texas higher education coordinating board (THECB) primary care residency program and the THECB GME program in 2019.~~

~~*Utah*~~

~~In 1997, Utah created the Utah Medical Education Council (UMEC) to address the state's physician shortage and coordinate GME funding that would be better aligned with the state's workforce needs.[31] UMEC is a quasi-governmental body whose responsibilities~~

~~include assessing the physician workforce demands, developing and suggesting policy, finding and disbursing GME funds, addressing physician shortages in rural locations and managing the GME funds from CMS.~~

~~To better address the state's GME funding needs, Utah applied for, and was granted, a CMS waiver that placed GME funding into a funding pool, rather than directing money to hospitals.[32] By pooling all of the state's GME funding, UMEC was able to distribute the funds directly to hospitals and programs based on specific workforce needs and objectives.[34] The waiver resulted in a 29% increase between 1997 and 2007, from 442 residents in 25 programs to 568 residents in 30 programs.[35] But ultimately ended on June 30, 2010.[36] According to UMEC'S most recent (2016) report, the state has averaged 202 residents per year between 2006 – 2016, representing an apparent decline from levels under the waiver.[37]~~

ADDITIONAL GME FUNDING MODELS

There are several other GME funding models that have the potential to provide revenue for GME programs. These models differ based on who would receive payment, how funds would be allocated among recipients, what mechanisms would be needed to assure accountability and whether payment would be linked to the achievement of specific performance measures. These models are not mutually exclusive and could be combined to enhance stability and accommodate GME policy objectives. In some cases, a combination of several models would be necessary to pay for different kinds of costs to address specific educational or workforce objectives.

All-Payor System

Several states have experimented with variations on an all-payor system, which combines funding from all public and private sources to pay for state GME programs, but only Maryland's is currently operational. ~~Although private payors rarely finance GME directly, the higher rates that they pay to teaching institutions help to subsidize GME programs~~.

Maryland implemented their all-payor system in 1977. [31~~8~~] ~~Prior to~~ **BEFORE** 2014, the state used a prospective, diagnosis-based payment model, which kept the rate of increased spending per admission below the national rate, although it was less successful at containing overall hospital spending due to increased admission rates. [32~~9~~] Since 2014, Maryland has used a payment model that requires each hospital to monitor both the number and cost of admissions. Payment rates are established by the quasi-governmental Health Services Cost Review Commission, and all payors must pay a given hospital the same rate for the same service, but each hospital negotiates its own rates. [33~~40~~] Maryland has built costs associated with GME funding, as well as surcharges to support an "uncompensated care pool" and a public plan for residents with chronic health conditions, into its rate-setting system.[34~~41~~] Maryland also has a Medicare waiver that allows it to set Medicare payment rates. Historically, Maryland had to keep its Medicare costs below national growth for hospital payments per admission in order to maintain its waiver, but the test under the current waiver focuses on the per capita growth in hospital spending.[35~~42~~]

IN ADDITION, New York previously operated an all-payor system that levied a "covered lives assessment" tax on private health insurers based upon member fees by region and type of insurance. [36~~43~~] The moneies collected went into two pools, one that subsidized care for individuals who were unable to pay and another that funded GME. In the late 2000s, however, the GME funding pool was reallocated toward uncompensated care in teaching hospitals, and other "high priority" items. [37~~44~~]

Health Care Provider Model

Medicare pays for GME through a health care provider model. This approach links payments for clinical training to patient care activities. Because the indirect payment adjustment is intended to reflect the impact of teaching activity on a hospital's patient care costs, this model is particularly appropriate for IME payment.

Several variants of this model have been proposed to encourage more training in nonhospital settings. These variants include a direct pay approach whereby payment would follow the resident training in a nonhospital site; pro rata payment of hospitals and nonhospital sites based on agreements among the entities or a fixed allocation developed in accordance with national cost data; or payment to the entity that bears substantially of the costs of the nonhospital rotations. The first two variants would create substantial administrative burdens. Although less burdensome and disruptive, the third option appears less likely to achieve its stated goal. A voucher or "set-aside" system also could be established whereby a specified share of payment for direct training costs would be earmarked for nonhospital settings.

The principle advantage of the provider model is that regulatory, cost reporting, auditing and compliance mechanisms already are in place and well established. To this extent, these mechanisms have created persistent problems, which is also a disadvantage. This model also fails to provide financial support for training that occurs outside of patient care settings (e.g., much of the training in preventative medicine).

Education Model

Under this approach, payment would be made to a program sponsor, which would be held accountable for the way funds are allocated and expended. Sponsors could be universities, medical schools, colleges of osteopathic medicine, hospitals, consortia or any other entity whose primary purpose is providing education and/or health care services (e.g., a health department, public health agency, organized health care delivery system or hospital system.) Because this model treats direct GME costs as costs of education not patient care, adherents suggest that greater weight will be placed on educational needs as training decisions are made. In return for payment, the program sponsor (or its designees) would assume all (or substantially all) of the direct costs of operating the GME program. Allocation of GME costs and payments would be established through written agreements between the sponsor and clinical training sites. Because IME is a hospital cost, this model would not provide an adequate basis for IME payment.

The principle advantage of this approach is its focus on education. Unfortunately, it also would require a major shift in program accountability and funding, particularly when

265 training occurs in community teaching hospitals rather than academic medical centers,
266 where medical schools and hospitals are linked through common ownership or other
267 longstanding corporate or strategic ties. This approach could also discourage hospitals
268 from maintaining or starting GME programs.

269 As a variant to this model, vouchers could be given directly to residents so that they could
270 purchase their own GME. Unlike the vouchers mentioned in conjunction with the provider
271 model, these vouchers would permit residents to control funding for their graduate training,
272 allowing monies to flow to all training sites. In theory, this approach would enhance
273 competition among GME programs. It is not clear, however, how much effect it would have
274 because programs already compete for residents and rotation sites.

275 Besides the disadvantages mentioned above, this approach would require a new
276 regulatory mechanism for determining which residents qualify for funding and how many
277 positions would be funded. It also fails to address national physician workforce needs or to
278 assure that adequate resources are available in needed specialties and geographic areas.
279 Implementing this approach could result in substantial year-to-year fluctuations in program
280 size, undermining the stability of existing programs and making faculty and resource
281 allocations difficult. Residents could also be hard pressed to hold their programs
282 accountable once training decisions are made.

283 *Planning Model*

284 Under this approach, funding would be channeled through planning or coordinating bodies
285 such as GME consortia, state GME, physician workforce commissions or task forces. The
286 primary function of these bodies would be to assess the health care needs of their
287 communities and to allocate funds based on local workforce considerations.

288 Because this approach ties training and funding decisions to local health care needs, it
289 could provide the states, payers and consumers a stronger role in allocating funds to meet
290 workforce objectives. According to the Council on Graduate Medical Education, however,
291 existing evidence tends to suggest that reliance on consortia to assume such a role may
292 be premature. Adopting this model would also require development of a new regulatory
293 mechanism to assure accountability. Payment to state entities or consortia provides little
294 incentive to nonteaching hospitals to initiate new GME programs.

295 *Performance Model*

296 This model links payment to the achievement of specific performance measures or
297 objectives. Funding could also be used to support specific projects or demonstrations on
298 infrastructure development or particular workforce goals.

299 While this approach encourages innovation and quality enhancement, it is more suitable
300 as a supplemental funding mechanism than as a primary source of GME payment. This
301 model is also dependent on well-defined quality measures and workforce priorities. Neither
302 may be sufficiently well developed to support all GME funding decisions at this time. This
303 approach could also result in substantial year-to-year fluctuation in payments if all funding
304 decisions are based on meeting specific performance measures.

CONCLUSION

With federal and state ~~budgets~~**POLICYMAKERS** look**ING** to cut spending, GME programs are particularly vulnerable. ~~AOA policy, "affirms its support for maintaining and enhancing the quality of teaching programs."~~[44] As states address shortfalls in federal GME funding, the AOA encourages all viable models to be examined. While all-payor systems have proven effective in some states, each state is different and may require its own unique GME funding system. Additionally, as states and the federal government implement health insurance exchanges, we encourage the exploration of using a portion of any health plan surcharge to fund GME. This will help address concerns related to workforce shortages as the covered population grows.

AOA POLICY STATEMENTS

1. The AOA supports states creation of alternative GME funding mechanisms and the alignment of this funding with their states health care priorities. Most important, within these priorities are training those specialties with the largest workforce shortages and providing care to those residents in the greatest needs (those in rural and underserved areas).

2. The AOA believes that state GME funding must account for osteopathic programs that incorporate the holistic approach to medicine, including the promotion of osteopathic principles and tenets.

3. The AOA believes that state GME funding should focus on programs that address comprehensive health care systems that deliver care through a variety of settings. This includes training residents in hospitals, rural clinics, community-based centers and patient-centered medical homes. These programs should also provide training in advancing technologies within the delivery of care.

4. The AOA believes that state GME funding should emphasize the importance of both basic and clinical research in an effort to advance the practice of medicine and the care patients receive.

5. The AOA supports the physician-led, team-based model of care. The AOA believes that state GME funding should promote this model of care by promoting interprofessional education, so that physicians can not only learn to lead the health care team, but also better understand the skills and abilities each member brings to that team.

6. Finally, this policy is intended to complement AOA Policy, ~~H329-A/2016~~ Graduate Medical Education Funding and Incentives -Source: H218-A/21, and the AOA should continue to support the osteopathic community in its efforts to increase GME funding

SUBJECT: OFFICE BASED SURGERY – SOURCE: H360-A/19

SUBMITTED BY: Council on State Health Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant but requires updating to reflect subsequent changes at the state level; now, therefore be it

RESOLVED, that the Council on State Health Affairs recommends that the following be REAFFIRMED AS AMENDED.

WHITE PAPER – OFFICE-BASED SURGERY

INTRODUCTION

DUE TO ITS CONVENIENCE AND POTENTIAL FOR COST SAVINGS, OFFICE-BASED SURGERY IS AN ATTRACTIVE OPTION FOR PATIENTS; HOWEVER, REGULATORY STANDARDS AND OVERSIGHT VARIES BY STATE, LEADING TO CONCERNS OVER PATIENT SAFETY. FURTHER, THERE IS A LACK OF COMPREHENSIVE, STANDARDIZED GUIDELINES FOR STATES TO RELY UPON TO ENSURE THAT OFFICE-BASED SURGERY PRACTICES ARE SAFE. THE GOAL OF THIS WHITE PAPER IS TO PROVIDE DETAILED RECOMMENDATIONS ON PHYSICIAN QUALIFICATIONS, EQUIPMENT, EMERGENCY PROTOCOLS, AND REPORTING MECHANISMS THAT STATES CAN IMPLEMENT TO BENEFIT PATIENTS, BEYOND A SIMPLE POLICY STATEMENT IN SUPPORT OF OR OPPOSITION TO THE PRACTICE OF OFFICE-BASED SURGERY. THIS HELPS PHYSICIANS –INCLUDING OSTEOPATHIC PHYSICIANS – AND PATIENTS, BY ENSURING THAT OFFICE-BASED PROCEDURES REMAIN A SAFE AND CONVENIENT OPTION.

Background

~~A~~**THE** number of surgical procedures that were once only performed in hospitals or ambulatory surgery Centers (ASCs~~S~~) ~~can~~ **THAT ARE** now be**ING** performed in a physician's office **HAS GROWN TO 53% AS OF 2023[1]. ALTHOUGH THERE ARE NO OFFICIAL SAFETY STATISTICS MAINTAINED FOR PROCEDURES CONDUCTED IN OFFICE SETTINGS, VARIOUS STUDIES, SUCH AS A 2020 REPORT PUBLISHED IN THE JOURNAL OF VASCULAR SURGERY, INDICATE A CONSISTENTLY STRONG**

TRACK RECORD OF PATIENT SAFETY~~Of the 80 million outpatient surgeries performed in the US in 2009, the most recent year for which comprehensive data is available, it is estimated that over 12 million were performed in physicians' offices~~.[~~1~~**2**] Proponents of office-based surgery ~~assert~~**BELIEVE** that many procedures can be performed safely and effectively in a physician's office due to advances in technology, anesthesia, and laparoscopic techniques. In addition, many ~~argue~~**INDICATE** that office-based surgery is easier to schedule and more comfortable for patients than surgery performed in a hospital. Perhaps most significant, however, is the reported cost savings for office-based surgery compared to surgery performed in a hospital. One study reported that the average cost of an Unicompartmental Knee Arthroplasty done in an office setting was an average of $20,500 less than the average charge of $46,845 for the same procedure in the hospital.[2]

Despite these benefits, the practice of office-based surgery has been controversial due to the lack of ~~established~~**STANDARDIZED** rules and regulations **ACROSS STATES**. At the beginning of the 21st century, the fact that most states did not regulate office-based surgery led some observers to compare it to the "Wild West."[3] As of 20~~1~~4**23**,**45** ~~29~~ states had enacted rules, regulations or guidelines that specifically appl**Y**~~ied~~ to office-based surgery.[4] These regulations help to ensure that office-based surgery is conducted with appropriate equipment, adequately trained personnel and established patient safety standards. However, because this practice remains unregulated **OR UNDER-REGULATED** in ~~many~~**SOME** states, the concern that surgery performed in a physician's office may not be as safe as surgery performed in a hospital or licensed ASC persists.

While the media has reported a number of stories of tragic outcomes following office-based surgery, the actual rate of morbidity and mortality following **t**~~T~~hese procedures is hard to determine because adverse event reporting is **NOT** required in ~~less than half of~~ all states.[5]

According to a 2017 Florida report **(THE MOST RECENT YEAR FOR WHICH INFORMATION WAS AVAILABLE)** that compared risk-adjusted hospitalization rates following surgical procedures across physician offices, freestanding ASCS, and hospital outpatient departments in Florida, rates were generally higher for office-based procedures, especially more complex procedures. [6]

Although office-based surgery may be appropriate for many surgical patients, proper attention must be given to patient safety in order to minimize adverse events.

Need for Office-Based Surgery Rule Development

States have taken different approaches to the regulation of office-based surgery. A number of state medical boards have adopted guidelines or rules for physicians to follow when performing office-based procedures. A position statement issued by the North Carolina medical board on this issue contains recommendations on physician credentialing, emergencies, performance improvement, medical records, equipment and supplies, and personnel. Any failure to comply puts a physician at risk of disciplinary action by the board.[**7**]

In many states, office-based surgery centers are exempt from licensure requirements that apply to hospitals and ASCS because the procedures that they perform are considered to be relatively low-risk. Some states require centers to register with a state agency such as the department of health, while others do not require any general oversight, and surgical practitioners are regulated by state medical licensing boards in the normal course of their physician oversight duties.[8]

Classification of Office-Based Surgery

Office-based surgical procedures are usually classified based on the level of anesthesia used. Typically the procedures are classified into three groups: Level 1, 2, and 3 or Class A, B, and C.[9] While not uniform, these classifications are often referred to by state medical boards and state legislators; therefore, understanding the different levels is an important basis for a discussion of office-based surgery. First, Level 1 surgical procedures are minor procedures performed under topical, local, or infiltration block anesthesia without preoperative sedation. Second, Level 2 surgical procedures are minor or major procedures performed in conjunction with oral, parenteral or intravenous sedation or under analgesic or dissociative drugs. Finally, Level 3 surgical procedures utilize general anesthesia or major conduction block anesthesia and require the support of bodily functions.[10]

Physicians and Staff in the Office-Based Surgical Facility

UNLIKE PROCEDURES THAT TAKE PLACE IN A HOSPITAL, WHERE CREDENTIALING REQUIREMENTS MEAN THAT PHYSICIANS WHO PERFORM SURGERIES ARE BOARD CERTIFIED OR OTHERWISE TRAINED TO DO SO, WITHOUT STATE ACTION, NO SUCH REQUIREMENTS EXIST IN THE OFFICE-BASED SETTING. ~~For example, a 2010 study found that nearly 40% of physicians offering liposuction in southern California had no specific surgical training.[11] Further, four deaths have been reported since 2013 at a single south Florida clinic where cosmetic surgery is performed by physicians who are not formally trained or board certified in plastic surgery.[12]~~ While no single medical discipline has a monopoly on proper qualifications for performing office-based surgery, ~~such~~ incidents **OF ADVERSE OUTCOMES RELATED TO A LACK OF SPECIALIZED TRAINING** may spur state licensing boards to consider instituting licensure by specialty or board certification as opposed to an unlimited scope of practice.

Equipment Required

Equipment used in office-based surgery must be kept in excellent working condition and replaced as necessary. The type of monitoring equipment required in office-based settings depends on the type of anesthesia used and individual patient needs. However, every facility must have emergency supplies immediately available, including emergency drugs and equipment appropriate for cardiopulmonary resuscitation. This includes a defibrillator, difficult airway equipment, and drugs and equipment necessary for the treatment of malignant hyperthermia.

Transfer Agreement

Emergencies occasionally arise during surgery requiring patients to receive a level of care higher than that available in the office-based setting. Provisions must be in place to provide this care in a comprehensively outfitted and staffed facility located nearby should it be needed.

Adverse Incident Reporting

Adverse events that may occur in office-based surgical facilities include patient deaths, cardio-respiratory events, anaphylaxis or adverse drug reactions, infections, and bleeding episodes. Reporting of adverse incidents to an appropriate state entity is an important patient safety measure.

Regulation of Office-Based Surgery

Unlike hospitals and ambulatory surgery centers, not all office-based surgical facilities are subject to regulations on emergencies, fire, sanitation, drugs, staff, training, and unanticipated patient transfers. Common sense dictates that states should take steps to ensure that patients who undergo surgery in physicians' offices receive the same standard of care as patients in ambulatory surgery centers or hospitals.

~~Conclusion~~ AOA POLICY STATEMENTS

The practice of office-based surgery will likely **ONLY** continue to grow in the coming years. The following statements represent the AOA's position on the appropriate use of office-based surgery:

1. The AOA firmly believes that steps must be taken to ensure that office-based surgery is as safe for patients as hospital- or ambulatory care center-based surgery;

2. The AOA supports state licensing boards in surveying their licensees or researching the issue of office-based surgery regulation to determine if office-based surgery rule development is necessary;

3. The AOA believes that Level 1 and Level 2 procedures are acceptable to be performed in an office-based setting. However, Level 3 procedures should only be performed in an office setting that has been accredited by an accreditation organization such as the Joint Commission, the American Association for Accreditation of Ambulatory Surgery Facilities (AAAASF), the Accreditation Association for Ambulatory Health Care (AAAHC) or the AAAHC'S healthcare facilities accreditation program;

4. The AOA believes that surgery performed in a physician's office must be done by a physician or non-physician clinician qualified by education and training to perform that specific procedure with appropriate physician oversight;

5. The AOA believes that only health care providers who have completed the appropriate education and training should perform office surgical procedures;

6. The AOA believes that a physician must administer ~~the~~ anesthesia or if a non-physician clinician administers ~~the~~ anesthesia, a supervising physician must be physically present in the office-based surgical facility during the administration of anesthesia and remain physically available until the patient has fully recovered and has been discharged from anesthesia care. In case of an emergency, personnel with training in advanced resuscitative techniques should be immediately available until the patient is discharged;

7. The AOA believes office-based surgical facilities must have the appropriate medications, equipment, and monitors necessary to perform the surgery and administer the anesthesia in a safe manner. The equipment and monitors must be maintained, tested, and inspected according to the manufacturer's specifications;

8. The AOA believes physicians and non-physician clinicians who perform office-based surgery shall be responsible for coordinating and ensuring appropriate care for patients who require emergent, unexpected postoperative transfer and/or hospitalization. Written protocols must be in place for timely transfer to an accredited hospital located within reasonable proximity to the office. Office personnel must be appropriately trained in emergency protocols in order to be able to respond when emergency or extended services are needed to protect the health or well-being of the patients;

9. The AOA supports reporting of adverse incidents related to surgical procedures performed in an office setting to a state entity, as required and appropriate, provided that these disclosures will be considered confidential and protected from discovery or disclosure; and

10. The AOA supports the position that state medical licensing boards are the appropriate entity to create and implement regulations regarding office-based surgery. 2019

~~AOA POLICY PAPER~~:

WHITE PAPER – SAFE HAVEN NON-REPORTING PROTECTIONS FOR PHYSICIANS

INTRODUCTION

IN THE WAKE OF RISING BURNOUT RATES AMONG U.S. MEDICAL PROFESSIONALS—A PHENOMENON THAT HAS DIRE CONSEQUENCES FOR BOTH HEALTHCARE PROVIDERS AND THE PATIENTS THEY SERVE—THERE IS COMPELLING EVIDENCE THAT A SIGNIFICANT PROPORTION OF U.S. PHYSICIANS AND MEDICAL STUDENTS EXPERIENCE SYMPTOMS OF BURNOUT, COMPOUNDED BY THE STIGMA SURROUNDING MENTAL HEALTH AND SUBSTANCE USE TREATMENT. CONSEQUENTLY, THERE IS A CRITICAL DEMAND FOR POLICY REVISIONS THAT OFFER SUPPORT WITHOUT THE FEAR OF DISCIPLINARY ACTIONS OR PROFESSIONAL REPERCUSSIONS BY ADVOCATING FOR 'SAFE HAVEN NON-REPORTING' PROTECTIONS, WE AIM TO FOSTER AN ENVIRONMENT WHERE PHYSICIANS CAN SEEK NECESSARY TREATMENT CONFIDENTIALLY, THEREBY SAFEGUARDING THEIR WELL-BEING AND ENSURING THE CONTINUED PROVISION OF HIGH-QUALITY CARE TO THEIR PATIENTS. THROUGH DETAILED RECOMMENDATIONS, THIS PAPER INTENDS TO PAVE THE WAY FOR A MORE SUPPORTIVE, UNDERSTANDING, AND RESILIENT HEALTHCARE SYSTEM.

Background

Burnout among US medical students, residents and practicing physicians is a significant problem that negatively impacts medical professionals as well as the patients that they serve. **IN 2021, A RESEARCH STUDY FOUND THAT 62.8% OF U.S. PHYSICIANS**

EXHIBITED AT LEAST ONE SYMPTOM OF BURNOUT, UP FROM 38.2% IN 2020, 43.9% IN 2017, 54.4% IN 2014, AND 45.5% IN 2011.~~Physicians in the US report symptoms of burnout at nearly double the rate of other US workers after controlling for work hours and other factors, and between 2011 and 2014, this percentage increased by 9%.[1] Further~~**IN ADDITION, 54%** ~~twenty to forty percent~~ of medical students, interns and residents report**ED** experiencing symptoms of burnout.[2]

Burnout is characterized by a "wide array of signs, symptoms and related conditions, including fatigue, loss of empathy, detachment, depression and suicidal ideation."[3] It has also been shown to negatively impact a physician's prescribing habits, test ordering, risk of malpractice suits, and whether patients adhere to their recommendations.[4] Although the aforementioned description does not explicitly reference substance use disorders, we will hereafter reference symptoms of burnout, mental health and substance use issues (and their treatment) interchangeably.

Even when resources are available to help physicians and students address symptoms of burnout; however, both groups report similar concerns about pursuing them. For purposes of this policy paper, we will focus on concerns regarding lack of confidentiality and possible disciplinary or discriminatory action by schools, employers, state medical licensing boards and other academic or professional entities.

~~**Report of the FSMB Workgroup on Physician Wellness and Burnout**~~ **FEDERATION OF STATE MEDICAL BOARDS' RECOMMENDATIONS**

IN 2016, t~~T~~he Federation of State Medical Boards (FSMB) convened a Workgroup on Physician Wellness and Burnout (Workgroup) to study the issue of physician burnout and draft**ED** recommendations to help groups in the medical community better address this issue. The Workgroup found that although numerous resources exist to help medical students and physicians experiencing symptoms of burnout or impairment through academic institutions, medical licensing boards and state physician health programs, social and professional pressures make students and physicians reluctant to seek treatment or to report seeking it.[5] Both medical students and physicians cited fears that seeking help would result in documentation on academic or professional records which could lead to discrimination or denial of a medical license, and ultimately jeopardize their ability to practice medicine.

ALTHOUGH THE FSMB RECOMMENDATIONS CAME OUT IN 201~~6~~8, A 2023 MEDSCAPE REPORT FOUND THAT SOME ISSUES REMAIN, WITH FOUR IN 10 PHYSICIANS STATING THAT THEY AVOIDED SEEKING HELP FOR DEPRESSION OR BURNOUT DUE TO CONCERNS ABOUT THEIR EMPLOYERS OR STATE MEDICAL BOARDS FINDING OUT. ~~According to a poll conducted by the FSMB and the Medical Society of the State of New York, a state that does not currently include any questions about mental health or substance use on medical licensure applications, sixty-nine percent of physician respondents who were experiencing symptoms of burnout reported that they would be significantly less likely to seek treatment if they were required to report it on a licensing application or renewal.~~[6]

Further, despite evidence showing that a past history of mental health or substance use disorders does not reliably predict future risk to the public, **APPROXIMATELY ONE-QUARTER OF** state licensing applications still contain questions about applicants' histories with these issues. **AS OF OCTOBER 2023, 26 STATE MEDICAL BOARDS HAD REMOVED INTRUSIVE LANGUAGE FROM THEIR LICENSURE APPLICATIONS, and 11 STATES WERE IN THE PROCESS OF MAKING THESE CHANGES.[7] THIS SHIFT SIGNIFIES A GROWING RECOGNITION WITHIN THE MEDICAL COMMUNITY OF THE IMPORTANCE OF ADDRESSING MENTAL HEALTH CONCERNS WITHOUT STIGMA OR FEAR OF PROFESSIONAL REPERCUSSIONS; HOWEVER, ADDITIONAL ACTION IS NEEDED TO ENACT THESE CHANGES IN ALL 50 STATES.** ~~As of 2017, 43 states asked questions about both mental and physical health conditions on their medical licensing applications, but just 23 limited all questions to disorders causing functional impairment and only six limited them to current problems.[7]~~

~~Although a similar number of medical licensing boards asked about both mental and physical health, questions about the latter tended to be much more lenient and vague while questions about the former were much more specific and probing.[8] Boards were significantly more likely to ask if physicians had ever been diagnosed, treated or hospitalized for a mental health or substance use disorder than for a physical disorder, and unlike questions about physical disorders, the questions were not limited to just those conditions that might *currently* affect a physician's ability to practice.~~

~~Responses by medical licensing boards to disclosures made by physicians about their mental health were also unpredictable and varied greatly from state to state. Some boards asked for a doctor's note, others requested all medical records related to an applicant's history and treatment, others required applicants to appear before the board to defend their ability to practice medicine and still others required applicants to undergo ongoing monitoring or practice under a restricted license.~~

ALTHOUGH MEDICAL LICENSING BOARDS PREVIOUSLY ASKED ABOUT BOTH MENTAL AND PHYSICAL HEALTH, HISTORICAL PRACTICES SHOWED A DISPARITY IN THE SPECIFICITY AND INTENSITY OF QUESTIONS, WITH MENTAL HEALTH INQUIRIES BEING MORE PROBING. RECENT CHANGES ACROSS VARIOUS STATES NOW REFLECT A MORE BALANCED APPROACH, ENSURING QUESTIONS ARE LIMITED TO CONDITIONS THAT DIRECTLY IMPACT A PHYSICIAN'S ABILITY TO PRACTICE MEDICINE.

THE RESPONSE OF MEDICAL LICENSING BOARDS TO PHYSICIANS' DISCLOSURES OF MENTAL HEALTH ISSUES HAS ALSO EVOLVED, AIMING FOR A MORE SUPPORTIVE APPROACH. FORTY-SEVEN STATES NOW OFFER PHYSICIAN HEALTH PROGRAMS, WHICH TYPICALLY SERVE AS AN ALTERNATIVE TO DISCIPLINE IF A PHYSICIAN VOLUNTARILY DISCLOSES A MENTAL OR BEHAVIORAL HEALTH CONDITION AND REMAINS IN COMPLIANCE WITH A RECOMMENDED TREATMENT PLAN.[8] THESE CHANGES HIGHLIGHT A COMMITMENT TO REDUCING THE STIGMA AROUND MENTAL HEALTH AND SUPPORTING PHYSICIANS IN SEEKING CARE, THEREBY PROMOTING A HEALTHIER, SAFER ENVIRONMENT FOR PHYSICIANS AND THEIR PATIENTS.

In addition to the deterrent effect that questions from medical licensing boards regarding mental health appear to have on physicians' willingness to seek help when needed or report seeking it, courts have found that many such questions run afoul of the Americans with Disabilities Act (ADA). The ADA protects individuals with disabilities, including psychiatric disabilities, from discrimination. Professional licensing bodies are not exempt from the requirements of the ADA, and courts have stated that "[public entities] may not administer a licensing or certification program in a manner that subjects qualified individuals with disability to discrimination on the basis of disability."[8] Public entities such as a medical licensing board also may not "impose or apply eligibility criteria that screen out or tend to screen out an individual with a disability … unless such criteria can be shown to be necessary for the provision of the service, program, or activity being offered."[9]~~5~~

In order to encourage medical students and physicians to seek appropriate treatment for mental health and substance use disorders, and ensure that medical licensing boards comply with the ADA, the FSMB encourages medical licensing boards to adopt policies that support physician "safe haven non-reporting."

"Safe haven non-reporting" allows physicians who are receiving appropriate treatment for mental health or substance use issues who are monitored and in good standing with their confidential treatment program to (re)apply for licensure without having to disclose their treatment to the board. Only disclosures related to issues that are not being appropriately treated and could inhibit a physician's ability to safely practice medicine would be required.

~~RECOMMENDATIONS~~ AOA POLICY STATEMENTS

The AOA adopts the following statements as its official position on "safe haven non-reporting:"

1. The presence or history of a mental health or substance use disorder does not automatically render a physician unfit to practice medicine, and the AOA opposes discrimination or disciplinary action against a physician or medical student based solely on the presence of such a disorder, without taking into consideration the individual's behavior or treatment.

2. The AOA urges state medical licensing boards **AND CREDENTIALING ENTITITES** to regard physical and mental health disorders similarly and refrain from asking about past history of mental health or substance use diagnoses or treatment on licensure applications or renewals **WHICH CONFLICTS WITH THE AMERICANS WITH DISABILITIES ACT.** Instead, the AOA encourages ~~boards~~ **ENTITIES** to focus on whether any *current* physical or mental disorders are present which may impair that individual's ability to safely practice medicine. The AOA further encourages ~~state medical licensing boards~~ **PHYSICIAN LICENSING AND CREDENTIALING ENTITIES** to offer a "safe haven non-reporting" option for physician applicants who are undergoing appropriate treatment for current mental

172 health or substance use disorders. This alternative helps to ensure confidentiality of
173 such treatment for the individual physician while ensuring patient safety.
174
175 **3.** If ~~medical licensing boards~~ **PHYSICIAN LICENSING AND CREDENTIALING**
176 **ENTITIES** decide to use questions related to mental health or substance use
177 disorders on ~~a medical licensure application or renewal~~ **AN APPLICATION OR**
178 **RENEWAL**, the AOA encourages ~~boards~~ **ENTITIES** to consider phrasing them
179 similarly to questions about physical health. For example:
180
181 ***"Are you currently suffering from any condition for which you are not being***
182 ***appropriately treated that impairs your judgment or that would otherwise***
183 ***adversely affect your ability to practice medicine in a competent, ethical and***
184 ***professional manner? (Yes/No)"***
185
186 **4.** "Appropriate treatment" includes physician participation provided through state
187 physician health programs ~~accredited~~ **RECOGNIZED** by the Federation of State
188 Physician Health Programs, or programs following similar standards and guidelines,
189 and adherence to treatment recommendations.
190
191 **5.** Finally, the AOA encourages medical educational and professional entities, as well
192 organizations throughout the medical community, to support and educate students
193 and physicians about confidential treatment and "safe haven non-reporting" options,
194 in order to encourage these individuals to seek appropriate treatment without fear of
195 documentation, disciplinary action or other repercussions.

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy; and

WHEREAS, the Council on State Health Affairs believes that the policy remains relevant now, therefore be it

RESOLVED, that the Council on State Health Affairs recommends that the following policy be REAFFIRMED.

The American Osteopathic Association (AOA) supports electronic prescribing (e-prescribing) for non-scheduled pharmaceuticals.

The AOA supports e-prescribing for all scheduled pharmaceuticals on a voluntary basis without CMS monetary penalty and without state sanctioned civil or criminal penalties.

The AOA encourages pharmacies to utilize e-prescribing systems that are in compliance with state and federal law.

The AOA supports the following principles in its advocacy efforts relating to the development of e-prescribing standards:

- SAFETY: Safety alerts should be prioritized and readily distinguishable from commercial messages; these messages should be allowed to be suppressed for efficiency.

- E-PRESCRIBING drugs should be listed with both generic and name brands.

- PRIVACY: Information on patients' medication should be current, comprehensive, accurate and maintained in compliance with HIPAA.

- TRANSPARENCY: Third part involvement must be transparent and disclosed to the prescribing physician and patient.

- DESIGN: Financial interests should not dictate the design of systems (i.e., all drugs should be available). Standards must require fail-safes in any system to prevent the introduction of health care errors.

36
37 • INTEGRATION: Systems and should integrate with existing healthcare
38 technology and existing workflow (i.e., download of patient data from
39 EMR).
40
41 • SCALABILITY: Any standards should be broad-based and applicable to
42 all healthcare delivery systems.
43
44 • TIMING: These standards should be in place at the earliest possible time
45 to allow software vendors and practitioners adequate time to become
46 compliant with said standards and perform all necessary testing prior to
47 the implementation.

Policy Statement

INTRODUCTION

THE AFFORDABILITY OF PRESCRIPTION DRUGS REMAINS A MAJOR ISSUE FOR PATIENTS AND, BY EXTENSION, THEIR PHYSICIANS, AND PHARMACY BENEFIT MANAGERS (PBMS) CONTINUE TO PLAY A ROLE IN DRIVING UP THE COST OF DRUGS IN THE UNITED STATES.THEREFORE, A COMPREHENSIVE WHITE PAPER ON PHARMACY BENEFIT MANAGERS (PBMS) REMAINS NECESSARY, TO ENABLE US TO SUPPORT LEGISLATION TO ADDRESS THE VARIOUS WAYS IN WHICH PBMS EXTRACT PROFITS FROM THE DRUG SUPPLY CHAIN AND KEEP MEDICATION COSTS HIGH FOR PATIENTS.

Background

The ~~rising~~ **HIGH** cost of drugs is a major concern in the U.S., where consumers pay two to ~~six~~**FOUR** times more for prescription drugs than the rest of the world.[1] ~~Between 2007 and 2017, drug spending in the U.S. increased by 40%, an increase largely attributable to existing drugs rather than new drugs entering the market[2]~~ Increased drug prices have resulted in patient noncompliance, with sometimes fatal consequences, as patients are either unable to afford their prescription medications or are forced to choose between buying them or other necessities like food and shelter.

ONE MAJOR FACTOR IMPACTING A COUNTRY'S DRUG SPENDING IS THE FACT THAT MANY OTHER GOVERNMENTS AROUND THE WORLD DIRECTLY REGULATE OR NEGOTIATE DRUG PRICES. ~~There are a number of factors that distinguish the U.S. health care system and drug spending from other industrialized nations; for one, almost all countries except the U.S. have policies in place to lower drug prices, including price controls and cost-effectiveness thresholds[3].~~ By contrast, **WITH THE EXCEPTION OF DRUGS IDENTIFIED UNDER THE INFLATION REDUCTION ACT,** the U.S. government does not directly negotiate drug prices, instead leaving it up to individual insurers to negotiate prices with drug makers. This fragmented and opaque system often results in different prices for different buyers, a power imbalance that favors corporate entities at the expense of consumers.

While numerous factors contribute to prescription drug pricing and affordability in the U.S., for purposes of this policy paper we will focus on the role of pharmacy benefit managers (PBMs).[2]

Pharmacy Benefit Managers

PBMs are companies hired by insurers, employers, and government entities to manage prescription drug programs on behalf of health plan beneficiaries.[~~5~~3] Originating several decades ago as processors of prescription drug claims for insurers, for which they earned a flat fee, PBMs initially lowered drug prices by forming large networks of health plan customers which enabled them to negotiate discounts with drug makers. Since then, consolidation among PBMs has concentrated an 8~~5~~**0**% market share in the hands of three major players (CVS Caremark, Express Scripts and OptumRX), and drug prices have risen as a result.[~~6~~4]

PBMs affect numerous aspects of the drug supply chain, and they are adept at leveraging their power with drug makers, employers and pharmacies to extract profits that they keep for themselves rather than passing them on to patients. As a result, patients pay cost shares that do not reflect the actual lower cost of the drug, which increases out-of-pocket costs and co-pays.

The following represents a summary of PBM revenue sources:

Rebates. PBMs decide which drugs will be covered on a prescription drug plan or plan formulary, and drug makers often pay "rebates" or other fees to PBMs to have their drugs included. Drug makers then pass these costs on to consumers in the form of higher drug prices.

PBMs also determine which pharmacies will be included in a prescription drug plan's network and how much they will be paid. Sometimes, PBMs entice plan sponsors to require beneficiaries to use a mail order pharmacy – usually one with financial ties to the PBM – for certain medications.

Prior Authorization. PBMs use prior-authorization requirements to steer patients to formulary drugs regardless of their efficacy, by requiring them to obtain prior authorization if they or their providers prefer to continue the original (non-formulary) drug. This can result

in harm to patients who may miss doses or experience other negative effects from adjusting to a new drug, which may not be as effective as the one they were previously stable on.

Spread pricing. "Spread pricing" refers to the difference between what a PBM charges an insurer for a drug and what it reimburses the pharmacy for it. Neither the insurer nor the pharmacy knows what the PBM charges or reimburses the other for a particular drug, and PBMs take advantage of this lack of transparency to pocket the spread.

Gag clauses (partially mooted by the federal Patient Right to Know Drug Prices and the Know the Lowest Price Acts of 2018). Prior to the passage of the aforementioned Acts in October 2018, PBMs in most states could utilize "gag clauses" to prevent pharmacists from telling customers when their copayment amount would exceed the out-of-pocket cost of a drug. PBMs then kept the customer's overpayment, known as a "clawback," as profit. The Acts banned gag clauses, giving pharmacists the option – but *not* requiring them – to tell patients when a drug would cost less out-of-pocket.

Direct and Indirect Remuneration (DIR) Fees. DIR refers to the monies that a PBM may collect from a dispensing pharmacy to offset member costs.[~~7~~**5**] The Centers for Medicare and Medicaid Services (CMS) originally created DIR as a way to track rebates and other price adjustments applied to Medicare Part D prescription drug plans that were not captured at the point of sale and that resulted in savings to a PBM, and ultimately to CMS (in theory).

Since its inception, DIR has transformed into a catchall term for any fees a pharmacy pays to a PBM, including **FEES ASSOCIATED WITH QUALITY-BASED BONUS PAYMENT MODELS PBMS IMPOSE ON PHARMACIES,** such as fees to participate in the PBM's network or fees paid for failing to meet certain quality measures.[~~8~~**6**] PBMs have also begun expanding the use of DIR from just Medicare Part D plans to commercial plans, and pocketing the savings. While some DIR fees are legitimate, many are assessed in an arbitrary and opaque manner that prevents pharmacies from fully understanding how much they will be reimbursed for a prescription when entering into a PBM contract. In addition, **DIR** ~~many of the~~ fees are **NOW** charged **AT THE POINT OF SALE, POTENTIALLY CAUSING CASH FLOW PROBLEMS FOR SMALL AND COMMUNITY-BASED PHARMACIES THAT ARE TRYING TO BUDGET FOR, AND ULTIMATELY IMPLEMENT, NEW PATIENT SERVICES**. ~~retroactively which impacts the ability of independent pharmacies in particular to budget for, and ultimately implement, new patient services.~~

State Action

AS OF 2023, ALL 50 STATES HAVE TAKEN SOME LEGISLATIVE ACTION RELATED TO PBMS, IN AN EFFORT TO BRING MORE FAIRNESS AND TRANSPARENCY TO THEIR IMPACT ON DRUG PRICING. ~~There is a growing desire among states to regulate PBMs, but approaches vary from state to state. Besides the gag clause ban, which Congress enacted nationally in 2018, state legislative proposals typically include one or more of the following elements: requirements that PBMs register with the state,~~

~~requirements for certain mandatory disclosures by PBMs, and prohibitions on PBMs incentivizing the use of mail-order pharmacies[9].~~

IN A ~~A~~ **MAJORITY OF STATES,**~~s of December 2018, 23 states require~~ PBMs **ARE NOW REQUIRED** to be licensed by a state agency.[7] The agency promulgates rules for licensure, which may include state approval of compensation arrangements between PBMs and pharmacies to ensure that reimbursement rates are fair and reasonable, or requirements that PBMs disclose aggregate rebates to purchasers.

SOME STATES, INCLUDING ARKANSAS, FLORIDA, INDIANA, NEW JERSEY, NEW MEXICO AND WYOMING, HAVE ENACTED BILLS THAT FOCUS ON ENSURING THAT THE REBATES THAT PBMS NEGOTIATE FROM DRUG MANUFACTURERS ARE PASSED ON TO CONSUMERS. THESE LAWS REQUIRE THAT PATIENTS' COST-SHARING RESPONSIBILITY BE CALCULATED AT THE POINT OF SALE AND REDUCED BY A PERCENTAGE OF THOSE REBATES, AIMING TO LOWER OUT-OF-POCKET EXPENSES.[8]

~~Thirteen states require substantial disclosures by PBMs, and sometimes by insurers as well, to promote transparency regarding rebates and the extent to which PBMs pass them on to insurers, and ultimately to patients, in the form of premium reductions or decreased cost-sharing requirements.~~

~~Three~~ **EIGHTEEN** states currently have laws preventing PBMs from requiring or incentivizing patients to **USE PHARMACIES THAT THEY OWN OR ARE AFFILIATED WITH, WHICH ARE OFTEN** mail-order pharmacies.[9]~~, which~~ **PBM "STEERAGE" TOWARDS MAIL-ORDER PHARMACIES** could drive some independent pharmacies out of business, thereby costing patients access to other services that their local pharmacies may provide[10] All major PBMs have their own mail-order pharmacies, which allow them to tightly control formularies and steer patients towards drugs for which they receive financial benefits, as well as to reap rewards from spread pricing. Large PBMs can also exclude other independent mail-order pharmacies from their networks and negotiate prices that allow them to undercut competitors, which raises antitrust questions.

PBMs were originally created to save consumers money, and increased regulation by states could theoretically drive up operating costs and reduce savings for consumers; however, extensive consolidation among PBMs has since tilted the balance of power away from consumers and obscured prices as well as the ability of outsiders to determine PBMs' real effect on the costs of the drug supply chain. States have little power to prevent future PBM mergers, thus increased regulation and transparency requirements may be their only effective tools.

~~RECOMMENDATIONS~~ AOA POLICY STATEMENTS

The AOA adopts the following statements as its official position on PBMs:

1. State and federal governments should work to ensure that PBMs function as originally intended; that is, to save patients money. In order to accomplish this goal, a multi-pronged approach that incorporates various elements below in order to

target PBMs' various revenue sources and address misaligned incentives should be considered.

2. PBMs should be required to publicly disclose any rebates or other "financial benefits" that they receive from other members of the drug supply chain and pass through a certain percentage to the plan sponsor. They should also be prevented from utilizing prior authorization requirements to steer patients to formulary drugs or mail-order pharmacies to which they have financial ties.

3. In order to improve the viability of independent pharmacies and preserve competition, PBMs should be prohibited from charging pharmacies retroactive DIR fees.

4. Capping patient copayments at the pharmacy reimbursement rate or the cost without insurance would help address PBM clawbacks.

5. The ~~aoa~~ AOA supports health policy which promotes making life saving medications (i.e. epinephrine for anaphylaxis, naloxone for drug overdose, and insulin/glucagon for diabetes) free for uninsured patients and a fully covered benefit for insured patients.

6. The U.S. Department of Justice should enforce antitrust protections to prevent additional PBM market consolidation, which is likely to lead to further drug formulary restrictions and reductions in the number of – and PBM reimbursement for – independent pharmacies.

7. Lastly, governmental action to improve PBM transparency is key. The Federal Trade Commission (FTC) has the unique power to shed light on the effect of PBMs on the drug supply chain through its Section 6(b) authority and accompanying subpoena power. Section 6(b) allows the FTC to "conduct wide-ranging economic studies that do not have a specific law enforcement purpose," and it could exercise this authority to obtain PBM rebate and fee information and to analyze PBMs' effects on drug pricing.[1]

SUBJECT: CLARIFICATION ON THE TERMS "OSTEOPATHY, AND "OSTEOPATH" IN THE UNITED STATES (AMENDMENT TO POLICY H316-A/21)

SUBMITTED BY: Osteopathic Physicians & Surgeons of California

REFERRED TO: Committee on Professional Affairs

WHEREAS, the term "osteopathy" in common usage in the United States (U.S.), is often used interchangeably with "osteopathic manipulative treatment" and "osteopathic medicine,"; and

WHEREAS, in the U.S., the word "osteopath" is often used interchangeably with the terms "osteopathic physician" and “doctor of osteopathic medicine”; and

WHEREAS, accredited osteopathic medical schools in the United States may confer either the degree of Doctor of Osteopathy, or "Doctor of Osteopathic Medicine," (both abbreviated “D.O.”) yet, in meaning and practice, both terms apply to the exact same education and qualifications for postgraduate training and licensure; and

WHEREAS, the word, "osteopath," was first coined by our profession's founder, Andrew Taylor Still, to uniquely name the profession which he founded, and intended to encompass the complete scope practice of medicine, surgery, and obstetrics, and include osteopathic manipulative medicine[1]; and

WHEREAS, the profession of “osteopathy” progressed along non-medical lines in many countries outside of the U.S., and its practitioners possess scopes of practice that are limited to manual techniques, unlike the American osteopathic profession; and

WHEREAS, practitioners who train and practice outside of the US frequently use the terms "osteopathy" and "osteopath," to refer to themselves and their practice, leading to some confusion regarding the competencies and qualifications of U.S. trained D.O.s, despite the fact that there is no regulatory oversight body or pathway to licensure for non-medical “osteopaths” in the U.S.; and

---

[1] "...Article III - The object of this corporation is to establish a College of Osteopathy, the design of which is to improve our present system of surgery, obstetrics, and treatment of diseases generally, and place the same on a more rational and scientific basis, and to impart information to the medical profession and to grant and confer such honors and degrees as are usually granted and conferred by reputable medical colleges..." A.T. Still, Autobiography, 1908.

WHEREAS, in the United States, the Commission on Osteopathic College Accreditation (COCA) is the sole authority for accreditation of osteopathic medical schools, and sets standards for conferral of the D.O. degree; and

WHEREAS, the AOA House of Delegates adopted a policy "Osteopathic Term Protection" in 2006 (most recently reaffirmed in 2021 as H316) to address use of osteopathic terminology; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) amend Policy H316-A/21 Osteopathic Term Protection as follows:

The American Osteopathic Association's policy regarding the preferential terms to be used in reference to the osteopathic **MEDICAL** profession has been updated over the years; **HOWEVER, WE SUPPORT RESTRICTING THE USE OF *ALL* OSTEOPATHIC TERMINOLOGY IN THE UNITED STATES TO STUDENTS AND GRADUATES OF OSTEOPATHIC MEDICAL SCHOOLS ACCREDITED BY THE COMMISSION ON OSTEOPATHIC COLLEGE ACCREDITATION, OR THOSE PHYSICIANS HAVING COMPLETED AN ACGME ACCREDITED RESIDENCY WITH OSTEOPATHIC RECOGNITION OR OSTEOPATHIC NEUROMUSCULOSKELETAL MEDICINE**~~However we are mindful that there are osteopathic physicians practicing medicine who were granted degrees in "osteopathy."~~ **WE** will continue to advocate for ~~the~~ **TERM** protection ~~of the terms "osteopathic," "osteopathy" and "osteopath" as referenced~~ in state and federal laws and rules **IN THE INTEREST OF TRANSPARENCY AND PATIENT SAFETY.**

TERMS WHICH SHOULD BE PROTECTED INCLUDE "OSTEOPATHIC MEDICINE," "OSTEOPATHIC PHYSICIAN," "OSTEOPATHIC MANIPULATIVE TREATMENT," AND "OSTEOPATHIC MANIPULATIVE MEDICINE," AND RELATED ABBREVIATIONS. ADDITIONALLY, "OSTEOPATH", "OSTEOPATHY", AND OTHER TERMS DERIVED FROM THE WORD, "OSTEOPATHY," WHICH IMPLIES QUALIFICATION FOR THE COMPLETE PRACTICE OF MEDICINE IN THE US, SHOULD ALSO BE PROTECTED. DELIBERATE ALTERNATIVE USAGE OF THESE TERMS BY NON-PHYSICIANS MAY BE CONFUSING TO THE PUBLIC AND MAY CONSTITUTE UNPROFESSIONAL CONDUCT OR FRAUD.

SUBJECT: WHISTLEBLOWER POLICY - SOURCE: H346-A/19

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Committee on AOA Governance and Organizational Structure reviewed and amended the Whistleblower policy in January 2022 and the AOA Board of Trustees approved in February 2022 at its Midyear meeting; now therefore be it

RESOLVED, that the AOA Board of Trustees recommends that the following policy be REAFFIRMED AS AMENDED.

Whistleblower Policy

~~The AOA encourages its employees and members and/or volunteers to disclose and report concerns regarding perceived violations of federal and state laws and regulations and perceived financial irregularities.~~

~~Such reports may be made by any employee or member and/or volunteer openly, confidentially or anonymously, and they may be made in person, by telephone or in writing, including email.~~

~~Employees can report such concerns without fear of reprisal to any of the following individuals: department directors, the chief operations officer, the associate executive directors, the chief financial officer, the general counsel, the executive director or the AOA president. Employees can also report such concerns to the AOA Audit Committee.~~

~~Members and/or volunteers may report any concerns, charges or complaints to the AOA Committee on Ethics, including violations of the AOA Constitution & Bylaws, as per Article VII, Section 1(h).~~

~~Employees or members and/or volunteers who prefer to raise their concerns confidentially may do so by sending the appropriate executive or committee as outlined above a sealed envelope through US mail or interoffice mail and marking the envelope "Personal & Confidential" or by sending an email with the words "Personal & Confidential "in the subject line.~~

~~AOA employees or members and/or volunteers may also report their concerns about perceived violations of federal and state laws and regulations and perceived financial irregularities to appropriate governmental agencies without fear of adverse action.~~

~~The AOA complies with all applicable requirements of federal and state statutes and regulations concerning employee or member and/or volunteer "whistleblower" activity, including, without limitation, the Illinois Whistleblower Act [740 ILCS174/5, *et seq*].~~[3]

~~Among its provisions, the Illinois Whistleblower Act prohibits an employer from discharging or otherwise retaliating against an employee for any of the following actions:~~

- ~~disclosing to a law enforcement agency or other government agency information that the employer reasonably believes discloses a violation of any state or federal law, rule or regulation~~
- ~~refusing to participate in any activity that would result in the violation of any state or federal law, rule or regulation.~~

~~The Illinois Whistleblower Act also prohibits an employer from making, adopting or enforcing any rule, regulation or policy that prevents its employees from disclosing information to a government or law enforcement agency when employees have reasonable cause to believe that the information concerns a violation of a state or federal law, rule or regulation.~~

~~Likewise, the AOA extends these same protections for whistleblowing activity to its members and/ or volunteers. The AOA prohibits retaliation, or threat of retaliation, by or on behalf of the AOA, against members and/ or volunteers for making good faith complaints, reports or inquiries under this policy or for participating in a review or investigation under this policy. This protection extends to those whose allegations are made in good faith, but prove to be mistaken. The AOA reserves the right to discipline persons who make bad faith, knowingly false, or vexatious complaints, reports or inquiries.~~

THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) REQUIRES TRUSTEES, OFFICERS, EMPLOYEES, AND VOLUNTEERS TO OBSERVE HIGH STANDARDS OF BUSINESS AND PERSONAL ETHICS IN THE CONDUCT OF THEIR DUTIES AND RESPONSIBILITIES. AS EMPLOYEES AND REPRESENTATIVES OF THE AOA, THEY MUST PRACTICE HONESTY AND INTEGRITY IN FULFILLING THEIR RESPONSIBILITIES AND COMPLY WITH ALL APPLICABLE LAWS AND REGULATIONS.

APPLICABILITY

THIS POLICY APPLIES TO ALL AOA EMPLOYEES, MEMBERS OF THE BOARD OF TRUSTEES, AND MEMBERS OF AOA BUREAUS, COMMITTEES, COUNCILS, AND TASK FORCES.

REPORTING RESPONSIBILITY

THIS WHISTLEBLOWER POLICY IS INTENDED TO ENCOURAGE AND ENABLE EMPLOYEES AND OTHERS WITH KNOWLEDGE OF MISCONDUCT TO RAISE CONCERNS INTERNALLY SO THAT THE AOA CAN ADDRESS AND CORRECT INAPPROPRIATE CONDUCT AND ACTIONS. IT IS THE RESPONSIBILITY OF ALL PERSONS AS OUTLINED ABOVE TO REPORT

CONCERNS ABOUT SUSPECTED VIOLATIONS OF LAW OR REGULATIONS THAT GOVERN THE AOA'S OPERATIONS.

<u>NO RETALIATION</u>
IT IS THE POLICY OF THE AOA THAT THERE SHALL NOT BE ANY PERSONAL OR PROFESSIONAL RETALIATION AGAINST ANY PERSON WHO IN GOOD FAITH REPORTS A SUSPECTED VIOLATION OF LAW OR OTHER SIGNIFICANT MISCONDUCT. ANY EMPLOYEE WHO RETALIATES AGAINST A WHISTLEBLOWER SHALL BE SUBJECT TO DISCIPLINARY ACTION UP TO AND INCLUDING TERMINATION OF EMPLOYMENT. ANY MEMBER WHO RETALIATES AGAINST A WHISTLEBLOWER SHALL BE SUBJECT TO DISCIPLINARY ACTION (CENSURE, PROBATION, SUSPENSION, EXPULSION) AS OUTLINED IN THE AOA BYLAWS (ARTICLE VII, SECTION 1, PART H).

<u>REPORTING PROCEDURE</u>
EMPLOYEES: THE AOA ENCOURAGES OPEN COMMUNICATIONS. EMPLOYEES ARE ENCOURAGED TO SHARE THEIR QUESTIONS AND CONCERNS, WITH THEIR SUPERVISOR AS AN INITIAL STEP. SUPERVISORS AND MANAGERS ARE REQUIRED TO REPORT COMPLAINTS OR CONCERNS ABOUT SUSPECTED LEGAL VIOLATIONS IN WRITING TO ANY OF THE FOLLOWING: THE AOA'S GENERAL COUNSEL, CHIEF FINANCIAL OFFICER, CHIEF EXECUTIVE OFFICER, THE HUMAN RESOURCES DEPARTMENT LEADER OR THE AOA PRESIDENT, WHO HAVE THE RESPONSIBILITY TO INVESTIGATE OR HAVE INVESTIGATED ALL REPORTED COMPLAINTS.

INDIVIDUALS UNCOMFORTABLE WITH REPORTING A CONCERN TO THEIR SUPERVISOR OR WHO ARE NOT SATISFIED WITH THE RESPONSE PROVIDED BY THEIR SUPERVISOR ARE ENCOURAGED TO REPORT THE CONCERN DIRECTLY TO ANY OF THE INDIVIDUALS LISTED ABOVE.

MEMBERS: MEMBERS ARE ENCOURAGED TO REPORT THEIR CONCERNS TO THE CHAIR OR SECRETARY OF THEIR BUREAU, COMMITTEE, COUNCIL, OR TASK FORCE OR TO A MEMBER OF THE BOARD OF TRUSTEES OR THE CHIEF EXECUTIVE OFFICER. BUREAU, COUNCIL, COMMITTEE OR TASK FORCE CHAIRS AND SECRETARIES OR TRUSTEES RECEIVING SUCH REPORTS OR COMPLAINTS ARE REQUIRED TO REPORT THEM IN WRITING TO ANY OF THE FOLLOWING: THE AOA'S COMPLIANCE OFFICER (GENERAL COUNSEL), CHIEF FINANCIAL OFFICER, CHIEF EXECUTIVE OFFICER, HUMAN RESOURCES DEPARTMENT LEADER OR THE AOA PRESIDENT. AOA'S COMPLIANCE OFFICER (GENERAL COUNSEL) WILL HAVE THE RESPONSIBILITY TO INVESTIGATE OR TO HAVE INVESTIGATED ALL WHISTLEBLOWER REPORTS OR COMPLAINTS.

THE AOA COMPLIES WITH ALL APPLICABLE REQUIREMENTS OF FEDERAL AND STATE STATUTES AND REGULATIONS CONCERNING "WHISTLEBLOWER" ACTIVITY, INCLUDING, WITHOUT LIMITATION, THE

ILLINOIS WHISTLEBLOWER ACT [1] AMONG ITS PROVISIONS, THE ILLINOIS WHISTLEBLOWER ACT PROHIBITS AN EMPLOYER FROM DISCHARGING OR OTHERWISE RETALIATING AGAINST AN EMPLOYEE FOR ANY OF THE FOLLOWING ACTIONS:

- **DISCLOSING TO A LAW ENFORCEMENT AGENCY OR OTHER GOVERNMENT AGENCY INFORMATION THAT THE EMPLOYEE REASONABLY BELIEVES DISCLOSES A VIOLATION OF ANY STATE OR FEDERAL LAW, RULE, OR REGULATION.**

- **REFUSING TO PARTICIPATE IN AN ACTIVITY THAT WOULD RESULT IN A VIOLATION OF ANY STATE OR FEDERAL LAW, RULE, OR REGULATION.**

THE ILLINOIS WHISTLEBLOWER ACT ALSO PROHIBITS AN EMPLOYER FROM MAKING, ADOPTING OR ENFORCING ANY RULE, REGULATION OR POLICY THAT PREVENTS ITS EMPLOYEES FROM DISCLOSING INFORMATION TO A GOVERNMENT OR LAW ENFORCEMENT AGENCY WHEN THE EMPLOYEES HAVE REASONABLE CAUSE TO BELIEVE THAT THE INFORMATION CONCERNS A VIOLATION OF A STATE OR FEDERAL LAW, RULE OR REGULATION.

<u>COMPLIANCE OFFICER</u>
THE AOA'S COMPLIANCE OFFICER IS THE GENERAL COUNSEL. THE COMPLIANCE OFFICER IS RESPONSIBLE FOR ENSURING THAT ALL COMPLAINTS ABOUT UNETHICAL OR ILLEGAL CONDUCT ARE INVESTIGATED AND RESOLVED. THE COMPLIANCE OFFICER WILL ADVISE THE CHIEF EXECUTIVE OFFICER AND BOARD OF TRUSTEES OF ALL COMPLAINTS AND THEIR RESOLUTION AND WILL REPORT AT LEAST ANNUALLY TO THE FINANCE COMMITTEE AND THE AUDIT COMMITTEE ON COMPLIANCE ACTIVITY RELATING TO ACCOUNTING OR ALLEGED FINANCIAL IMPROPRIETIES.

<u>ACCOUNTING AND AUDITING MATTERS</u>
THE AOA'S COMPLIANCE OFFICER SHALL IMMEDIATELY NOTIFY THE CHIEF EXECUTIVE OFFICER AND THE AUDIT COMMITTEE AND/OR FINANCE COMMITTEE OF ANY CONCERNS OR COMPLAINT REGARDING CORPORATE ACCOUNTING PRACTICES, INTERNAL CONTROLS OR AUDITING AND WORK WITH THE COMMITTEE UNTIL THE MATTER IS RESOLVED.

<u>ACTING IN GOOD FAITH</u>
TO QUALIFY FOR PROTECTION AS A WHISTLEBLOWER, ANYONE FILING A WRITTEN COMPLAINT CONCERNING A VIOLATION OR SUSPECTED VIOLATION MUST BE ACTING IN GOOD FAITH AND HAVE REASONABLE GROUNDS FOR BELIEVING THE INFORMATION DISCLOSED INDICATES A

[1] 740 ILCS 174/5, et seq.

VIOLATION. REPORTING OF ALLEGATIONS THAT PROVE (A) NOT TO BE SUBSTANTIATED, AND (B) HAVE BEEN MADE MALICIOUSLY OR KNOWINGLY TO BE FALSE WILL BE VIEWED AS A SERIOUS OFFENSE FOR WHICH APPROPRIATE DISCIPLINARY ACTION CAN BE TAKEN. PERSONS WHO MAKE ALLEGATIONS WITH MALICE OR KNEW THAT THE ALLEGATIONS WERE FALSE WHEN MADE DO NOT ENJOY ANY OF THE PROTECTIONS AFFORDED UNDER STATE OR FEDERAL LAW.

CONFIDENTIALITY

REPORTS OF VIOLATIONS OR SUSPECTED VIOLATIONS MAY BE SUBMITTED ON A CONFIDENTIAL BASIS BY THE COMPLAINANT. REPORTS OF VIOLATIONS OR SUSPECTED VIOLATIONS WILL BE KEPT CONFIDENTIAL TO THE EXTENT POSSIBLE, CONSISTENT WITH THE NEED TO CONDUCT AN ADEQUATE INVESTIGATION.

HANDLING OF REPORTED VIOLATIONS

ANY EMPLOYEE RECEIVING AN ALLEGATION OF VIOLATION OF ETHICS OR LAW SHALL REPORT THE ALLEGATION TO THE AOA COMPLIANCE OFFICER. THE COMPLIANCE OFFICER WILL NOTIFY THE PERSON WHO SUBMITTED A COMPLAINT AND ACKNOWLEDGE RECEIPT OF THE REPORT OF VIOLATION OR SUSPECTED VIOLATION. ALL REPORTS WILL BE PROMPTLY INVESTIGATED AND APPROPRIATE CORRECTIVE ACTION WILL BE TAKEN IF WARRANTED BY THE INVESTIGATION.

SUBJECT: LOCATIONS OF FUTURE MEETINGS

SUBMITTED BY: Florida Osteopathic Medical Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, more than two decades ago, the House of Delegates (HOD) of the American Osteopathic Association (AOA) met in various locations around the country; and

WHEREAS, due to the expenses of printing and transporting paper, multiple staff members and heavy equipment from Chicago to other areas of the country the decision was made to permanently locate the HOD to the Chicago area; and

WHEREAS, the State of Illinois, and the City of Chicago have been gracious hosts for the leadership of our profession for many years; and

WHEREAS, over the past decade technologic advances have substantially reduced the use of paper, and the need for heavy equipment in conducting a successful meeting; and

WHEREAS, the Osteopathic profession has grown and expanded widely over the past two decades with substantially more schools, students and physicians across a much wider geographic footprint; and

WHEREAS, while OMED is held in various cities featuring a wide variety of educational opportunities to engage Osteopathic physicians from across our profession; and

WHEREAS, many Divisional Societies of the AOA have expressed a desire to host these annual meetings; and

WHEREAS, there are opportunities for the AOA to have greater visibility of the work done on behalf of our members across our profession through scheduling these meetings throughout the country; and

WHEREAS, many hotels and meeting sites could service the needs of the AOA at equal or lesser costs by competing for bids; and

WHEREAS, we believe that the AOA, and the Delegates would be best served by moving the House around the country to various locations to allow Divisional Societies to host the HOD, and to facilitate greater visibility and engagement across the profession.

As many AOA staff members are housed in the meeting hotel already, and as we have seen that through technology a mixture of on site and off site staff can support the meeting, and with the substantial reduction of paper and equipment needed to conduct the business of the house we believe that any additional flight or ground transportation expenses could be offset by the ability to competitively bid for sites, and through greater member engagement as the house conducts business; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) should explore options for meeting sites outside of the city of Chicago; and, be it further

RESOLVED, that the AOA will consider cost, member engagement, and public visibility in the decisions for booking future meeting sites; and, be it further

RESOLVED, that the AOA will report these findings to the Board of Trustees for analysis and approval prior to finalizing contracts for future meetings of the House of Delegates.

Background Information: Provided by AOA Staff
Current AOA Policy: None

Prior HOD action on similar or same topic: None

FISCAL IMPACT: $151K (plus increased risk with AOA having to ensure a specific number of hotel rooms were booked to avoid attrition and loss of concessions). The AOA Finance Committee has approved the fiscal impact.

The Annual Business Meeting and House of Delegates meetings are currently contracted at the Chicago Marriott through 2027. The House of Delegates should take into consideration the increased expense the AOA would incur if it is determined to rotate the Annual Business Meeting and House of Delegates annually beginning in 2028 versus continuing to host the Annual Business Meeting and House of Delegates in Chicago.

Increase in staff expenses:
There are a limited number of AOA staff who stay overnight at the hotel. These staff include those who are essential in executing the operations and production of the meeting. Additionally, there are staff from the Washington, D.C. office which incurs both travel and hotel room expense. The current budget for staff expenses is $28K.

Should the Annual Business Meeting and House of Delegates meeting rotate locations there will be 45 staff members (Senior Staff, operations/production staff and other supporting staff) that would incur travel expenses (flight, ground transportation, per diem, etc.). The anticipated budget for staff expenses would be $179K.

The variance between staff expenses from hosting the House of Delegates in Chicago ($28K) versus rotating locations ($179K) is $151K.

Increase in Meeting Related Expenses and Risk:
The Annual Business Meeting and House of Delegates has been hosted at the Chicago Marriott since 2016. There are many contractual cost-saving benefits to the AOA the hotel provides given AOA's partnership and repeat business history that would not be provided if moving locations, even if the venues selected were all under the same brand (i.e. Marriott).

There are cost savings for booking multi-year meetings at Marriott hotels. However, the savings are much deeper when hosting the same meeting at the same hotel. The additional benefits include:

- Favorable terms. The hotel can offer much more favorable terms, for example no hotel room attrition. Due to the deep history, the hotel can offer concessions like this and others as outlined by the Chicago Marriott leadership. These types of terms would not be acceptable for the same program at different hotels due to the risk it leaves for the hotel.
- Deeper discounts. Repeat meetings at the same hotel offers much deeper savings since it directly impacts one ownership group. Having the history year-over-year extends a much deeper discount than it would to any other program.
- Staff awareness: Hosting the same meeting at the same hotel creates hotel staff familiarity. For example, the Chicago Marriott staff understands the importance and schedule of the Annual Business Meeting and House of Delegates to the AOA. This supports the AOA staff in planning and provides the attendees with a welcoming experience.
- Chicago Marriott: The Chicago Marriot values the partnership with the AOA and the Annual Business Meeting and House of Delegates. The hotel leadership has provided a letter to be shared with the AOA House of Delegates.

DATE: July 20, 2024

SUBJECT: OPIOID CRISIS , CAUSES

SUBMITTED BY: Iowa Osteopathic Medical Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, on October 26, 2017 the opioid crisis was officially declared a "public health emergency" [1]; and

WHEREAS, some in the medical profession [2] and government [3] have stated that physician over prescribing of opioids is the major cause of the opioid crisis; and

WHEREAS, according to a recent National Institutes of Health study, deaths linked to commonly prescribed opioid medications have fallen 26% since 2016 while over the same timeframe deaths related to illicitly manufactured fentanyl have increased nearly 60% [4]; and

WHEREAS, physicians have been blamed for the opioid crisis [5]; and

WHEREAS, this misconception of physicians as the cause of the opioid crisis has led to unintended consequences such as the under-treatment of pain, a failure to address the ~~true~~ **CONTRIBUTING** cause**S** of the problem, and the misallocation of resources; now therefore be it

RESOLVED, that the American Osteopathic Association (AOA) shall advocate to Congress and appropriate governmental **AND REGULATORY** agencies to identify the ~~true~~ **CONTRIBUTING** causes of the opioid crisis and to develop solutions which target those causes; and, be it further

~~RESOLVED, that the AOA encourage these same entities to stop blaming physicians for causing the opioid crisis and publicly acknowledge the true causes of the problem.~~

RESOLVED, THAT THE AOA EDUCATE MEMBERS OF THESE ENTITIES AROUND THE COMPREHENSIVE CAUSES OF THE PROBLEMS, AND ADVOCATE FOR POLICIES AND POSITIONS THAT SEEK TO IDENTIFY AND MITIGATE THE OPIOID CRISIS RECOGNIZING THAT PHYSICIANS AND OTHER HEALTH CARE RESOURCES ARE CRITICAL TO ADDRESS THE MANAGEMENT OF OPIOID ~~ADDICTION, AND SHOULD NOT BE VILIFIED OR DISPARAGED AS THE PROXIMATE CAUSE OF THE CURRENT CRISIS.~~ USE DISORDER.

SUBJECT: SUPPORTING THE RIGHTS OF RESIDENTS TO UNIONIZE

SUBMITTED BY: Michigan Osteopathic Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, residents in medical training programs across the United States, including those in Michigan, often face challenges related to long work hours, inadequate compensation, lack of adequate supervision, insufficient resources, insufficient staff support and limited control over their work environments[2]; and

WHEREAS, these challenges can contribute to decreased quality of patient care, and/or adverse effects on the well-being and mental health of residents; and

WHEREAS, unionization has been shown to provide residents with a collective voice to negotiate for fair wages, reasonable working conditions, and improved patient safety standards[1]; and

WHEREAS, the American Osteopathic Association (AOA) is committed to promoting the welfare and professional development of osteopathic physicians and medical students within the state; now, therefore, be it

RESOLVED, that the American Osteopathic Association (AOA) supports the right of residents to form and join labor unions to advocate for their interests; and be it further

RESOLVED, that the AOA encourages all residency programs ~~to engage in constructive dialogue with their residents regarding their concerns and to~~ respect the rights of residents to organize and collectively bargain.~~; and, be it further~~

~~RESOLVED, that the AOA pledges to actively advocate for policies at the state and national level that support the rights of residents to unionize in order to promote fair and equitable working conditions in medical training programs.~~

SUBJECT: EXPANDING ~~NALOXONE AND OTHER~~ OPIOID REVERSAL AGENT**S'** ~~OR ANTAGONIST~~ AVAILABILITY AND ACCESSIBILITY: PROMOTING EMERGENCY USE IN COMMUNITIES **TO TREAT OPIOID OVERDOSE**

SUBMITTED BY: Michigan Osteopathic Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, in 2018 more Michiganders (2,809) died from drug overdoses than car accidents[1], killing about 47,000 people per year nationwide[6]; and

WHEREAS**,** in 2020 142.8 million prescriptions of opioids were filled in Michigan[1]; and in 2021, the per capita cost of a fatal opioid overdose in Michigan was $2357[2]; and

WHEREAS, having ~~naloxone and other~~ opioid reversal agent**S** ~~or antagonist~~ accessible in public areas such as grocery stores, pharmacies, gas stations, libraries, and community centers has been suggested to allow community members to promptly reverse opioid overdoses and establish greater trust among individuals using opioids[6]; and

WHEREAS, facilitating access to ~~the~~ opioid **OV**reversal agent**S**~~, naloxone and other opioid reversal agent or antagonist~~ in areas of high need through agencies like Families Against Narcotics' HARM:LESS and Harm Reduction Michigan could work towards improving the safety of patients struggling with substance use[5,8]; and

WHEREAS, the implementation of naloxone –and other opioid reversal agent**S** ~~or antagonist~~ in local public buildings across Michigan counties has been met with a positive response from local communities[7,8]; and the implementation of increasing community access to ~~naloxone~~ **REVERSAL AGENTS** could decrease emergency room visit costs, deaths, and stigma around ~~addiction~~**OPIOID USE DISORDER;** and

WHEREAS**,** there is a significant financial barrier to obtaining naloxone and other ~~opioid reversal agent or antagonist as one-unit retails for about $135, and,~~ while a prescription is not needed to obtain naloxone, many pharmacies require the patient to be evaluated by a healthcare professional before selling naloxone and other opioid reversal **agentS** ~~or antagonist~~, thereby introducing a potential ~~financial and~~ logistical burden; and

WHEREAS, state-wide community focused support groups such as Families Against Narcotics work to provide evidence-based services to people affected by ~~addiction~~ **SUBSTANCE USE DISORDER** but continue to primarily be sustainable through inconsistent sources of funding; and

WHEREAS, ~~naloxone is shelf-stable for three years, therefore, most expenses related would be triennial; and~~, existing channels of funding for ~~naloxone and other~~ opioid reversal **agentS** ~~or antagonist~~ are already established through the Substance Abuse and Mental Health Services Administration (SAMHSA) and the Michigan Department of Health and Human Services (MDHHS); and

WHEREAS, additional funding can be acquired through partnerships with local cities and their police departments; now, therefore be it

RESOLVED**,** that the American Osteopathic Association (AOA) advocate for the implementation of ~~a~~ steady funding ~~program~~ for community programs to increase the accessibility of ~~naloxone and other~~ opioid reversal agent**S** ~~or antagonist~~ coming to market through federal, state, and local channels; and be it further

RESOLVED, that the AOA advocate for ~~consideration to~~ implement**ATION OF** such programs ~~across additional~~ **IN ALL** states.

RESOLVED, THE AOA ENCOURAGES STATES TO INCORPORATE PHYSICAN EXPERTISE IN DEVELOPING AND ADMINISTERING SUCH PROGRAMS.

SUBJECT: GME EQUITY ANNUAL REPORT (POLICY H345-A/23 - AOA SUPPORT FOR GME EQUITY)

SUBMITTED BY: AOA Board of Trustees

REFERRED TO: Committee on Professional Affairs

WHEREAS, the 2023 House of Delegates adopted Policy H345-A/23 – AOA Support for GME Equity; and

WHEREAS, Policy H345-A/23 – AOA Support for GME Equity requires the AOA Board of Trustees to provide a report to the House of Delegates; now therefore be it

RESOLVED, that the 2024 House of Delegates accept the AOA Board of Trustees GME Equity 2024 Annual Report as outlined.

2024 GME Equity Annual Report

As the professional home for the nation's 148,000+ DOs and 38,000+ osteopathic medical students, the American Osteopathic Association (AOA) continually works to eliminate barriers that adversely impact access to training and employment opportunities for members of the osteopathic medical profession. Medical student parity is a top-of-mind concern for thousands of future DOs who are preparing for the next phase of their careers. The AOA is working tirelessly on behalf of the profession with partners across the House of Medicine to ensure full recognition.

Following 2023 AOA House of Delegates meeting, leaders from the AOA and the American Association of Colleges of Osteopathic Medicine (AACOM) held a summit on student parity, during which AOA President Ira P. Monka, DO, and CEO Kathleen S. Creason, MBA, met with leaders from national organizations that oversee osteopathic and allopathic medical education and training, including the American Medical Association (AMA), the Association of American Medical Colleges (AAMC) and the National Resident Matching Program (NRMP).

During the summit, several outcomes and next steps were identified and are being advanced as part of a shared action plan that includes:

- A joint statement outlining the workforce benefits of including osteopathic physicians in residency programs.
- Meetings with program directors across various specialties to gain insights on current behaviors and attitudes.
- Further data analysis.
- Review of VSLO and ERAS filters and participation policies.

- Plans for future meetings to identify additional opportunities for collaboration.

The osteopathic profession (members, students and affiliate organizations) has been provided with updates March through end May 2024.

Past Updates:

- March 21, 2024: AOA Student Parity Advocacy Update: Student Parity Summit
- April 16, 2024: AOA Student Parity Advocacy Update: Collaborative partnerships
- May 13, 2024: AOA Student Parity Advocacy Update: Grassroots advocacy on parity issues

Future Updates:

- Week of May 27, 2024: AOA Student Parity Advocacy Update: Building awareness with stakeholders
- More updates to be provided as additional advocacy and wins take place

SUBJECT: REMOVING INTRUSIVE MENTAL HEALTH QUESTIONS FROM LICENSURE AND CREDENTIALING APPLICATIONS

SUBMITTED BY: American College of Osteopathic Family Physicians

REFERRED TO: Committee on Educational Affairs

WHEREAS, medical students, residents, fellows, and early-career physicians experience higher rates of burnout compared to peers of comparable age in the general U.S. population (1); and

WHEREAS, early-career physicians also report high rates of depressive symptoms and fatigue (1); and

WHEREAS, the “quadruple aim” of healthcare added a call for improvements in the quality of work lives of physicians and other health care providers (2); and

WHEREAS, since 2004, physician suicide prevalence has increased, with male physicians having a 40% higher rate of suicide and female physicians having a 130% higher rate of suicide than the general population (3); and

WHEREAS, in 2017, a national study found approximately 40% of sampled physicians were hesitant to pursue formal mental health treatment due to apprehensions about potential consequences to their medical licensure (4,5); and

WHEREAS, 32 state medical licensing bodies and 22 nursing licensure boards continue to ask mental health questions on applications (6-8); and

WHEREAS, in 2005, 51 state medical licensing applications were reviewed and 49 (96%) contained questions pertaining to the physical or mental health or substance use history of the applicant and 34 (69%) state applications contained at least one "likely impermissible" or "impermissible" item based on the Americans with Disabilities Act (ADA) and appropriate case law (9); and

WHEREAS, these questions about mental health are stigmatizing, discriminatory, violate personal privacy, and have not been shown to elicit responses by which professional competence can be judged (9); and

WHEREAS, the presence of these questions on licensing applications may cause physicians to avoid or delay treatment of personal illness (9) due to fear of negative consequences in the workplace, including retribution, exclusion, loss of license or even their job (4); and

WHEREAS, states in which neither the initial nor the renewal application were consistent with the Federation of State Medical Boards' (FSMB's) recommendations had physicians who were statistically significantly more likely to be reluctant to seek help (odds ratio, 1.21; 95% CI, 1.07-1.37; P=.002) (4); and

WHEREAS, reluctance to seek help was more prevalent in states where the initial and renewal medical licensure application forms were considered "inconsistent" with FSBM recommendations, defined as asking about *ever* having a history of mental health conditions and/or seeking treatment versus simply asking about current (within the last 12 months) mental health conditions and/or treatments (4); and

WHEREAS, the 2018 FSMB policy highlights the difference between impairment and illness by specifically attributing the "inability of a physician to provide medical care with reasonable skill and safety due to illness or injury" as impairment (10); and

WHEREAS, the 2018 FSMB recommendations are to use:

- "only if impaired": if mental health questions are asked, they are limited to conditions resulting in impairment
- "only current": if mental health questions are asked, they are limited to questions about conditions within the last 2 years
- "safe haven non-reporting": if mental health questions are asked, safe haven nonreporting is offered [i.e., allowing physicians to not report diagnoses or treatment history if they are being monitored by and are in good standing with a Physician Health Program]
- "supportive language": inclusion of supportive or normalizing language regarding seeking mental health care (10); and

WHEREAS, only 1 state licensing board application was consistent with all 4 areas of the FSMB's recommendations and 5 states in the United States were inconsistent in all areas (11); now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports the adoption of the 2018 Federation of State Medical Boards recommendations which limit licensing questions to current mental health conditions resulting in impairment by all states and territories; and, be it further

RESOLVED, that the AOA supports removing intrusive mental health questions from medical licensure and credentialing applications that are not compliant with the Americans with Disabilities Act (ADA).

SUBJECT: EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974 – SOURCE: H414-A/19

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Committee on Public Affairs

---

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and
3 determined that it remains relevant; now, therefore be it

4 RESOLVED, that the Bureau on Federal Health Programs recommends that the
5 following policy be REAFFIRMED.

6 The American Osteopathic Association (AOA) supports federal legislation to reform
7 the Employee Retirement Income Security Act (ERISA) of 1974 to ensure the ability
8 of states to guarantee that clinical decisions be made by physicians and that
9 patients have legal remedies in state court. The American Osteopathic Association
10 also supports legislation that extends these protections to clinical decisions
11 impacting patient access to prescription drugs.

1 WHEREAS, this policy is to be reviewed for sunset; and

2 WHEREAS, the Bureau on Federal Health Programs has reviewed the policy; and
3 determined that it remains relevant; now, therefore be it

4 RESOLVED, that the Bureau on Federal Health Programs recommends that the
5 following policy be REAFFIRMED.

6 The American Osteopathic Association (AOA) recommends that physicians ask
7 patients and/ or caregivers about the presence of firearms in the home and counsel
8 patients who own firearms about the potential dangers inherent in gun ownership,
9 especially if vulnerable individuals' children and adolescents are present. The AOA
10 recommends strategies such as secure storage and the use of safety locks to
11 eliminate the inappropriate access to firearms by vulnerable individuals' children
12 and adolescents and recommends all physicians to educate families in the safe use
13 and storage of firearms.

SUBJECT: COMPARATIVE EFFECTIVENESS RESEARCH – SOURCE: H410-A/19

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has provided amendments to provide clarity and updates to the policy, now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA) ~~will continue to engage the osteopathic medical profession in Comparative Effectiveness Research (CER) projects and studies across private organizations and government agencies. The AOA will continue to disseminate CER findings to the osteopathic medical profession, consumers of medical information, patients, family members, and caregivers. The AOA~~ adopts the following principles regarding comparative effectiveness research:

Physicians and Patients

- Comparative effectiveness research should enhance the ability of osteopathic physicians (DOs) to provide the highest quality care to patients utilizing the best proven and widely accepted evidence based medical information at the time of treatment.

- Comparative effectiveness research should not be used to control medical decision-making authority, professional autonomy and should not be used to deny coverage or payment.

- Comparative effectiveness research should enhance, complement, and promote quality patient care, not impede it.

- Guidelines developed as a result of comparative effectiveness research studies should be advisory and not mandatory.

33 • Comparative effectiveness research should be viewed as a positive
34 development for patients and physicians and a useful tool in the physician's
35 armamentarium, working in concert with patients.
36
37 • Physicians in practice should be included in any discussions and decisions
38 regarding comparative effectiveness research.
39
40 • Comparative effectiveness research should focus on clinical effectiveness, not
41 cost effectiveness.
42
43 • The physician/patient relationship must be protected, and the needs of the
44 patients should be paramount.

SUBJECT: OCCUPANT PROTECTION IN PASSENGER VEHICLES – ~~WHITEPAPER~~ – SOURCE: H427-A/19

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) has reviewed the policy; and

WHEREAS, the current white paper provides consumer information from the websites of the National Highway Traffic Safety Administration and the National Safety Council; and

WHEREAS, in 2023, the National Safety Council updated its My Car Does What? website[1] to include an organized overview of the safety features available in specific vehicle types, simple explanations of what different technologies can and cannot do, and an extensive video library addressing automobile safety, all of which will be updated as needed; and

WHEREAS, the National Highway Traffic Safety Administration updates it's website[2] with annual statistics, and provides extensive information addressing Vehicle Safety including Car Seats and Booster Seats, Seat Belts, Tires, Air Bags, Driver Assistance Technologies, Electric and Hybrid Vehicles, Automated Vehicles for Safety, and Adapted Vehicles which is updated as needed; and

WHEREAS, the information from the National Safety Council and the National Highway Traffic Safety Administration is readily available to consumers and is updated regularly by these organizations; and

WHEREAS, after review of this information, the Bureau of Osteopathic Research and Public Health developed a policy statement supporting the ongoing work of the National Safety Council and the National Highway Traffic Safety Administration on Occupant Protection in Passenger Vehicles in lieu of a white paper, now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA):

1) SUPPORTS THE ONGOING EFFORTS OF THE NATIONAL SAFETY COUNCIL AND THE NATIONAL HIGHWAY TRAFFIC AND SAFETY

ADMINISTRATION AND OTHER RESPONSIBLE SAFETY ORGANIZATIONS TO EDUCATE THE PUBLIC REGARDING THE PROPER USE OF ALL OCCUPANT PROTECTION EQUIPMENT IN PASSENGER VEHICLES AND THE BENEFITS AND POTENTIAL DANGERS OF ALL OCCUPANT PROTECTION EQUIPMENT AND ACCIDENT-AVOIDANCE SYSTEMS.

2) **URGES RESEARCH AND DEVELOPMENT OF SAFER AUTOMOBILES AND CONTINUED MONITORING OF INJURIES AND FATALITIES RESULTING FROM TRAFFIC ACCIDENTS AND FAULTY AND/OR IMPROPER USE OF ALL OCCUPANT PROTECTION DEVICES IN PASSENGER VEHICLES.**

~~White Paper - Occupant Protection in Passenger Vehicles~~

~~INTRODUCTION~~

~~Today, almost every vehicle on the road has safety features that help drivers to be safer, either through protecting drivers and passengers involved in a crash or to preventing passenger vehicle crashes. This paper will provide information on all vehicle safety features and whether or not the feature is federally mandated, as well as recommend associated policy for adoption by the AOA.~~

~~OCCUPANT PROTECTION IN PASSENGER VEHICLES~~

~~Occupant protection includes safety belts, lower anchor and tethers for children (LATCH), airbags, and active head restraints. These features were designed to protect both drivers and passengers.~~

~~In 2016, National Highway Traffic Safety Administration (NHTSA) developed a fact sheet with information on passenger vehicle occupant protection, which included the use of restraints and benefits of safety belts, frontal airbags, and child restraints. According to the fact sheet, safety belts saved an estimated 14,668 lives of passenger vehicle occupants 5 years old and older in 2016, frontal air bags saved an estimated 2,756 lives, and car seats saved an estimated 328 lives of children under the age of 5 years.[1] NHTSA estimated that lap/shoulder safety belts, when used, reduce the risk of fatal injury among front-seat passenger vehicle occupants by 45%; moderate to critical injury to front-seat passenger vehicle occupants by 50%; fatal injury in front-seat light truck occupants by 60%, and moderate to critical injury to front-seat light truck occupants by 65%.[1]~~

~~Frontal airbags, combined with lap/shoulder bags offer effective safety protection for passenger vehicle occupants. NHTSA estimated that the use of frontal airbags without safety belts reduced the fatality risk by 11%, and when using safety belts, fatality drops further by 14%. In 2016, frontal airbags saved an estimated 2,756 lives. From 1987, when airbags first began to be installed in passenger vehicles, through 2016, 47,648 lives were saved.[1]~~

~~NHTSA estimated that car seat use in passenger vehicles reduce the risk of fatal injury by 71 % for infants younger than 1 year of age and 54 % for toddlers age 1 to 4 years. For infants and toddlers, the risk of fatal injury in light trucks is 58 % for infants younger than 1 year, and 59 % for toddlers ages 1 to 4 years. In 2016, car seat restraints saved an estimated 328 lives of children age 4 years and younger (313 associated with the use of car seats and 15 with the use of adult safety belts). NHTSA estimated that an additional 42 lives could have been saved (a total of 370 children age 4 and younger). Since 1975, the lives of 11,274 children 4 years old and younger involved in automobile accidents were saved because of child restraint use.[1]~~

~~There is an abundance of technology available to protect occupants of passenger vehicles. Most of the advancements have been in place for many years. As technology progressed, many of the features improved, resulting in more saved lives.~~

~~***Safety-Belt Features***~~

~~While the seat belt is the most important piece of automotive safety equipment, enhanced features have helped the seat belt do its job more efficiently.[2]~~

~~On March 1, 1967, the first Federal Motor Vehicle Safety Standard (FMVSS) mandate required that all passenger vehicles have safety belts. FMVSSs are United States federal regulations specifying the design, construction, performance, and durability requirements for passenger vehicles safety-related components, systems, and design features. FMVSSs are developed and enforced by the National Highway Traffic Safety Administration (NHTSA), pursuant to the National Traffic and Motor Vehicle Safety Act of 1966.~~

~~Safety belts now have belt tensioners; a device designed to pull a seat belt tight in an accident. This feature helps position passengers properly to take full advantage of a deploying airbag.[2]~~

~~Force limiters, companions to belt tensioners, reduce the force of the seat belt above a certain threshold and, in conjunction with belt tensioners and airbags, lessen the risk of upper body injuries to front seat passengers.[2]~~

~~Other seatbelt enhancements include inflatable seatbelts and adjustable shoulder anchors. Some car models have inflatable safety belts in the rear seat that reduces the force of the seat belt on passengers involved in an accident. Inflatable safety belts help protect the elderly and children who are the primary rear seat occupants.[2]~~

~~Safety belts also have adjustable shoulder anchors that help position the belt across the chest instead of the neck, which helps prevent neck injuries.[2]~~

~~***Latch (Lower Anchors and Tethers for Children)***~~

~~All passenger vehicles are now required to have the LATCH system. This system not only encourages the use of child safety seats but also integrates lower anchors and top tether attachment points. These anchors and attachment points allow the installation of the car safety seat to be effortless and eliminate the challenges and incompatibilities of installing a car safety seat. However, in some cars and trucks, the LATCH system is challenging to use correctly.[2]~~

~~NHTSA developed a traffic fact sheet that contains information on the fatal motor vehicle crashes and facilities, based on the Fatality Analysis Reporting System (FARS). Assuming that all passenger vehicle crashes have the LATCH system, in 2017, there were 23,351 passenger vehicle occupants killed in fatal crashes, 794 (3.3%) were infants (less than 1 year) to age 14. Of the 794 children killed, 244 (31%) were in a child restraint seat, 202 (25%) were in a lap belt only or shoulder, and lap belt and 103 (13%) were unknown. Of the 39,822 passenger vehicle occupants who survived in fatal crashes, 4,700 (11.8%) were infants (less than 1 year) to age 14 and 509 (11%) was unrestrained. Of the 63,373 passenger vehicle occupants involved in fatal crashes, 5,494 (8.7%) were infants (less than 1 year) to age 14, and 776 (15%) was unrestrained.[3]~~

~~***Airbags***~~

~~Since 1998, front airbags have been standard on all new cars, and since 1999, airbags have been standard on light trucks. The on-board computer-connected crash sensors detect a frontal collision and trigger the bags. In a few milliseconds, the bag inflates, then immediately deflates.[2]~~

~~Airbags have saved thousands of lives, but they also have the potential to cause children or occupants who do not use a seat belt to suffer injury or even death.[2] "From 1987 to 2015, frontal air bags saved 44,869 lives. That is enough people to fill a major league ballpark."[4] In 2016, the estimated number of lives saved by frontal airbags were 2,756.[4]~~

~~According to a Special Crash Investigations Report released in January 2009, from 1990 through January 1, 2009, there have been 296 airbag-related fatalities, (191 children, 92 adult drivers, and 13 adult passengers).[5] Also, the Takata airbag defection has caused 16 deaths in the U.S.; and 24 deaths and 300 injuries worldwide.[4]~~

~~Adaptive or dual-stage front airbags were introduced in 2003 and became the standard by 2007. Most airbag systems now have sensors that detect weight and the seat position of the driver and front passenger. The airbag system will deactivate if it senses that the driver is positioned too close to the wheel or the front passenger or child is out of position. This system minimizes injury from an accident.[2]~~

> ~~**Side Airbags.** Side-impact airbags protect the torso of front seat passengers. (Consumer Reports 2016) Depending on the passenger vehicle model, side airbags are offered as standard or optional equipment on many new passenger vehicles.[4]~~
>
> ~~**Side Curtain Airbags.** Side curtain airbags are designed to prevent occupants from hitting their heads and shielding them from flying debris. They remain inflated longer than other airbags to keep people from being ejected during a rollover or a high-speed side crash.[2]~~
>
> ~~A standard enacted late in 2007 and effective September 1, 2009, NHTSA mandated that all automakers phase in additional side-impact protection as a standard feature for their cars, trucks, and SUVs by 2013.[7]~~

~~***Active Head Restraints***~~

~~In a rear crash, active head restraints move up and forward to cradle the head and absorb energy to diminish whiplash injury.[2]~~

~~**ACCIDENT AVOIDANCE SYSTEMS**~~

~~The automotive industry is continually developing traffic safety technologies that will help drivers avoid crashes. Some of these technologies have a warning system and rely on the driver to take corrective action, while others are designed to automatically brake or steer, thus taking an active action approach to accident prevention. These features are expected to contribute to an overall improvement in traffic safety.~~

~~AAA Foundation for Traffic Safety developed a research brief that presented the probable safety benefits of various advanced driver assistance systems and provided estimates regarding the numbers of crashes, injuries, and deaths that such systems could have potentially helped to prevent based on the characteristics of the crashes that occurred on U.S. roads in 2016.[8]~~

~~According to the brief, the Forward Collision Warning (FCW) could theoretically have prevented an estimated 69-81% of all rear-end crashes, 76-81% of angle crashes, and 23-24% of single-vehicle crashes, totaling approximately 2.3 million crashes and 7,166 fatal crashes per year between 2002 and 2006. In 2016, there were an estimated 1,994,000 crashes, 884,000 injuries and 4,738 deaths that could have been prevented or mitigated by the FCW system if it were a standard feature in all vehicles.[8]~~

~~The brief estimated that Lane Departure Warning (LDW) and Lane Keeping Assistance (LKA) technology equipped in passenger vehicles could have theoretically addressed 179,000 crashes and 7,529 fatal crashes annually between 2004 and 2008. In 2016, there were an estimated 519,000 crashes, 187,000 injuries, and 4,654 deaths that could have been prevented or mitigated by LDW or LKA systems.[8]~~

~~The brief estimated that blind spot warning systems (BSW) could have prevented approximately 24% of all lane-changing crashes between 2004 and 2008. In 2016, there were an estimated 318,000 crashes, 89,000 injuries, and 274 deaths that could have been prevented by the BSW system.[8]~~

~~There is also an abundance of advanced driver assistance technology available. This technology is designed to prevent crashes. The features are relatively new; thus, they will have varying levels of NHTSA recognition.~~

~~***Forward Collision Prevention/Warning (FCW)***~~

~~**Adaptive Headlights.** Adaptive headlights are primarily intended to move side-to-side to help illuminate curves and corners. "These headlights use electronic sensors that can detect your steering angle to swivel based on the direction your car is heading."[9]~~

~~**Bicycle Detection.** The bicycle detection feature alerts the driver to a potential collision with a bicyclist ahead. NHTSA has not set any performance specifications for this feature.[10]~~

~~**Forward-Collision Warning (FCW).** Forward-collision warning utilizes cameras, radar or laser to scan for autos ahead and alert the driver that they are moving toward a vehicle in their path excessively quick and an accident is inescapable. Most Forward-Collision warning systems alert the driver with a visual and or audible signal to a potential accident, allowing time for a reaction.[2]~~

~~This system meets NHTSA performance specifications but is an option on many new cars, SUVs, and trucks.[11]~~

~~**Left Turn Crash Avoidance.** Left turn car avoidance feature monitors traffic when the driver turns left at low speeds. The sensor automatically activates warning sounds, dash lights, and brakes when a driver turns left into another car's path. NHTSA has not set any performance specifications for this feature.[12]~~

~~**Obstacle Detection.** Obstacle detection uses sensors mounted on the front and/or rear bumpers to determine the distance between the car and a nearby object. If an object is detected, the sensor automatically slows down the passenger vehicle. NHTSA has not set any performance specifications for this feature.[13]~~

~~**Pedestrian Detection.** This system utilizes the features of the Forward-Collision Warning system and automatically initiates the car's braking system to protect pedestrians from being hit. The car's camera or radar looks for a pedestrian in the path of the vehicle. Some systems will alert the driver with an audible or visual alert, and some systems will automatically initialize the emergency braking system if the collision is deemed high.[2]~~

~~NHTSA has not set any performance specifications for this feature but recognized that this is a promising technology. This system is currently an option on many new cars, SUVs, and trucks.[2]~~

~~***Breaking, Tire Pressure, and Anti-Rollover***~~

~~**Brake Assist.** Brake Assist helps detect when a driver is braking to maximum strength. In conjunction with anti-lock brakes, the system allows braking without locking the wheels. Studies have shown that most drivers are not braking as hard as they can, so Brake Assist intervenes to reach the shortest stop distance possible.[2]~~

~~**Traction Control.** Traction control electronically controls the wheels spinning motion during acceleration to obtain the maximum traction. This system is useful in wet, icy, or snowy conditions.[2]~~

~~**Electronic Stability Control (ESC).** Electronic stability control (ESC) is a step beyond traction control. In order to avoid sliding or skidding, this system helps keep the vehicle on its intended path during a turn. ESC uses a series of sensors connected to a computer to detect wheel speed, steering angle, side movement, and yaw (rotation). If the car drifts outside the intended path, the stability control system momentarily brakes one or more wheels and reduces the power of the engine to pull the car back on track depending on the system.[2]~~

~~ESC is particularly useful for tall, heavy-duty vehicles such as sports equipment pickups; helping to keep the vehicle from rollover.[2]~~

~~The federal government required stability control on all vehicles by the 2012 model.[2]~~

~~**Anti-Lock Braking System (ABS).** Before the invention of the anti-lock braking system (ABS), car wheels easily locked during hard braking which caused the front tires to slide and made steering impossible; which is dangerous on slippery surfaces. ABS prevents this from occurring. ABS uses sensors that are controlled by a computer on each wheel. The system maximizes the breaking action on each wheel to avoid locking the wheel which results in the driver maintaining control of the car to avoid hitting obstacles.[2]~~

~~"Over the past 10 years, most car manufacturers have made ABS standard in their vehicles. The federal government required all new cars to have ABS by September 1, 2011."[14]~~

~~**Automatic Emergency Braking (AEB).** AEB adds to the advantages of forward-crash cautioning. AEB will detect a potential crash, and if the response time is moderate, the vehicle will start braking.[2] This system engages Dynamic Brake Support and Crash Imminent Braking technology.~~

> ~~**Dynamic Brake Support (DBS) and Crash Imminent Braking (CIB).** If the driver does not brake hard enough to evade a crash, the DBS system will automatically supplement the driver's breaking to avoid the collision. If the driver does not take any action to prevent the accident, the CIB system will automatically apply the car's brakes to slow or stop the vehicle. (National Highway Traffic Safety Administration n.d.) This system has been available on some car models since 2006 but is typically an optional feature on many new cars, SUVs, and trucks.[15] NHTSA does recommend the CIB and DBS system if it meets NHTSA's performance specifications.~~

~~**Temperature Warning.** Temperature warning alerts the driver when the outside temperature is detected to be at or below freezing, which can affect road conditions. NHTSA has not set any performance specifications for this feature.[16]~~

~~**Hill Descent Assist.** Hill descent assist works with the passenger vehicle's existing braking systems to block the driver from going past a certain speed while traveling downhill or on treacherous terrain. If the vehicle begins accelerating past a safe downhill speed, this feature further applies the brakes. NHTSA has not set any performance specifications for this feature.[17]~~

~~**Hill Start Assist.** Hill start assist uses sensors in the vehicle to detect when a vehicle is on an incline. For a set time, the system maintains the brake pressure as the driver switches from the brakes to the gas pedal. Once the driver presses the accelerator, it releases the brake. In cars with a manual transmission, the Hill Start Assist also maintains brake pressure until the driver lets up on the clutch. NHTSA has not set any performance specifications for this feature.[18]~~

~~***Driver State Monitoring***~~
~~**Tire-Pressure Monitor System.** Tire pressure monitoring systems (TPMS) warn drivers of under or overinflated tires. The system helps to increase the car's fuel economy and potentially prevent a tire blowout which can be dangerous at high speeds and lead to a car accident. The federal government required all new vehicles to include this system starting in late 2007.[19]~~

~~**Curve Speed Warning.** Curb speed warning uses Global Positioning System (GPS) to alert the driver of upcoming sharp turns. This feature tracks the passenger vehicle speed and location and warns the driver to slow down when approaching curves and exits. NHTSA has not set any performance specifications for this feature.[20]~~

~~**High-Speed Alert.** High-speed Alert uses a built-in speed sensor and GPS to compare a database of known road speed limit against the driver's actual speed and alerts the driver if they are speeding. Some versions may track school and work zones. Future versions may be able to read limits through a camera. NHTSA has not set any performance specifications for this feature.[21]~~

~~**Adaptive Cruise Control (ACC).** ACC utilizes lasers, radar, cameras, or a blend of these to keep a steady distance between the driver and the vehicle ahead. If the traffic slows, some systems automatically stop the car and automatically accelerate to full speed when the traffic returns to normal. The system allows the driver to lose their focus on driving, which is a hazard.[2]~~

~~**Push Button Start.** Push Button Start simplifies turning the passenger vehicle on and off using a key fob unique to the vehicle. NHTSA has not set any performance specifications for this feature.[22]~~

~~**Drowsiness Alert.** Drowsiness alert borrows some of the sensors from lane departure warning systems to track lane markings and the automobile's lane position. Many versions of this feature will track how often the driver departs from the lane over a short period to determine if the driver may be drowsy. This feature may alert the driver using a coffee cup or other symbol on the dash suggesting that the driver take a break and when it will be safe to pull over. NHTSA has not set any performance specifications for this feature.[23]~~

~~Automatic High Beams. Automatic high beam lights switch from high to low and back again to improve nighttime visibility and as conditions warrant.[2]~~

~~***Parking and Backing Assistance***~~
~~**Backup Camera.** The backup camera assistance system is activated when the driver of a passenger places the gear in reverse. The monitor is in the center console of the passenger vehicle and displays items behind the car. This system is primarily used as a parking aid or spotting a child or pedestrian concealed in the blind zone.[2]~~

~~NHTSA required this life-saving technology on all new vehicles in May 2018.[11]~~

~~**Back-up Warning.** Back-up warning uses sensors mounted to the rear bumper. These sensors detect objects in the path of the vehicle. The system may beep or vibrate if an object is in the way.[24]~~

~~At this time, this is not a new car standard. As stated above, NHTSA required this life-saving technology on all new vehicles in May 2018.[15] In the future, manufacturers are expected to pair the back-up warning and the back-up camera systems in new cars.~~

~~**Parking Assist System.** Parking assist incorporates sensors in the car's front, rear, or both bumpers. The system alerts the driver that light poles, walls, shrubbery, and other obstacles are close when the passenger vehicle is moving at a slow speed (parking speed).[2]~~

~~**Automatic Parallel Parking.** Automatic parallel parking can detect objects in front and back of a car while parking. It provides audible warnings when detecting one or more objects. Advanced sensors read the gaps between vehicles in the area where the driver chooses to park. The feature will not activate if there is insufficient room to parallel park, which helps ensure that the car does not bump into any nearby vehicles. When initiated, this feature takes over some of the vehicle's steering and acceleration functions needed to park.[25]~~

~~Rear Cross-Traffic Alert. Rear cross-traffic alerts sense traffic crossing the path of a passenger vehicle as the driver backs out of a parking space or driveway. Some systems automatically brake to prevent an accident.[2]~~

~~The Rear cross-traffic alert system is not a standard feature for passenger vehicles, but the federal government does mandate the feature for such vehicles as buses and trucks. However, manufacturers often pair rear cross traffic alert with back-up cameras; so the mandate may increase the popularity of rear cross traffic alert features soon.[26]~~

~~***Lane and Side Assistance***~~
~~**Lane-Departure Warning (LDW).** Lane-departure warning alerts the driver when the car drifts out of its lane without activating the turn signal. The system uses a camera or lasers to monitor lane markers. The system will chime, the dashboard will blink, or the steering wheel or seat will vibrate~~

~~to warn the driver that they are drifting into another lane.[2] This system meets NHTSA's performance specifications and is an option on many new cars, SUVs, and trucks.[15]~~

~~**Lane-Keeping Assist (LKA).** Lane-keeping assist will generate mild steering to put the driver back in their lane. This system also senses when the driver leaves their lane.[2]~~

~~NHTSA has not set performance specifications for this technology, but this technology may be available on new cars, SUVs, and trucks.[15]~~

~~**Blind-Spot Warning (BSW) or Blind Spot Detection (BSD).** BSW utilizes radars or cameras and shines a light or symbol in or adjacent to the outside mirrors to warn the driver that another vehicle is driving in the parallel lane in an area that the drivers outside mirrors cannot detect. This system will sound an audible warning if the driver attempts to change lanes or uses their turn signal to indicate that they plan to change lanes. There are additional advanced systems that can initiate the braking system or the steering system in order to move the vehicle back towards the center of the lane.[2]~~

~~NHTSA has not set performance specifications for BSW, but NHTSA recognizes this as a promising technology. On many new cars, SUVs, and trucks, this system is an option and can help avoid a crash.[14]~~

~~**Side View Camera.** Side view cameras improve visibility on the passenger side, and in some cases provide the driver with a circuit view of the surrounding area of the car. The driver can use this feature to protect bumpers, side mirrors, trim, and wheel rims from damage at low speeds. This camera also provides an expanded view of a lane beside the driver when the driver uses their turn signal or when the driver manually activates this feature. This feature is similar to the blind spot monitor.[27]~~

~~***Communication***~~

~~**911 Notification - Automatic Crash Notification (ACN).** ACN is technology designed to notify emergency responders that an accident has occurred and provide the location. This system uses sensors to detect a deployed airbag or detect a dramatic and sudden deceleration. Once this is detected, the system will automatically connect to an operator who will be able to talk with the accident victims.[15]~~

~~This system has the potential to reduce death and disability by reducing the time it takes for emergency medical services to reach an accident scene and transport victims to a hospital.[15]~~

~~NHTSA has not set performance specifications for this technology. This system is available as an option on many new cars, SUVs, and trucks.[15]~~

~~**Telematics.** Telematics is the use of cellular, Global Positioning Satellite (GPS), and other technology (e.g., GM OnStar, BMW Assist, Hyundai Bluelink, Kia UVO, Lexus Safety Connect, Mercedes-Benz's mBrace, and Toyota Safety Connect) to gather and transmit data. "This system allows the driver to communicate with a central dispatch center at the touch of a button. This center knows the location of the vehicle and can provide route directions"[28] of emergency aid on request.[2]~~

~~**CONCLUSION**~~

~~There are many safety features to prevent automobile accidents and protect drivers. Because some do carry the potential risk of harm, these features continue to evolve. Research is regularly conducted to ensure that passenger vehicles are able to lessen the impact of crashes, reduce injuries and help drivers prevent crashes. However, consumer education is needed on the proper use of existing safety features. NHTSA, for example, not only conducts research and establish standards, but insurance companies and not-for-profit agencies such as AAA Foundation for Traffic Safety conduct research.~~

~~Although some crashes are unavoidable, the probability that passenger vehicle crashes,~~ ~~**INJURIES, AND DEATH** will continue to decrease is high because of the ongoing research, available educational opportunities, and existing and future advanced technologies.~~

~~After review of the existing literature on automotive safety, including airbags, the American Osteopathic Association (AOA) adopts the following policies: The American Osteopathic Association:~~

~~(1) supports the ongoing efforts of the National Safety Council (NSC), the National Highway Traffic and Safety Administration (NHTSA), the National Transportation Safety Board (NTSB) and other responsible safety organizations to educate the public regarding the proper use of all occupant protection devices in passenger vehicles, including safety belts, child safety seats, and airbags;~~

~~(2) urges continued corporate development and research into safer airbags and monitoring of adult and child fatalities resulting from airbag deployment; and~~

~~(3) encourages the National Safety Council, the National Highway Traffic and Safety Administration, the National Transportation Safety Board, and other responsible safety organizations to educate the public regarding the benefits and potential dangers of all occupant protection equipment and accident avoidance systems.~~

~~(4)~~

SUBJECT: ENHANCED LEGISLATIVE SUPPORT FOR BEHAVIORAL AND MENTAL HEALTH CARE

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Committee on Public Affairs

WHEREAS, seeking care for mental health disorders is becoming increasingly common, with the number of visits to emergency departments for mental, behavioral, and neurodevelopmental diagnoses amounting to 5.8 million visits per year[1]; and

WHEREAS, the COVID-19 pandemic exacerbated mental health issues for both adults and children with rates of depression and anxiety increasing by greater than 60% following the onset of the pandemic[2]; and

WHEREAS, there are limited resources, staff and training for mental health conditions in local communities, schools, emergency departments and urgent care facilities, which leads to restricted mental healthcare access, even in emergency situations[3]; and

WHEREAS, the cost of accessing mental health resources contributes to health disparities across different socioeconomic backgrounds[3]; and

WHEREAS, addressing the shortage of mental health professionals, particularly in rural and underserved areas, requires greater legislative support to enhance comprehensive access to mental health initiatives regardless of geographic location or socioeconomic status; and

WHEREAS, the American Osteopathic Association (AOA) supports access and affordability for various medical services but has no comprehensive legislative policy on mental health care; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) supports legislative and other efforts to enhance access to behavioral and mental health care resources in local communities, schools, emergency departments and urgent care facilities.

SUBJECT: ARTIFICIAL INTELLIGENCE IN HEALTHCARE REPORT AND ACTION PLAN

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, the 2023 House of Delegates approved Resolution H424-A/23 Artificial Intelligence in Healthcare which resolved that AOA will provide a report and action plan to the House of Delegates at its meeting in 2024; and

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) developed the attached report and action plan in response to Resolution H424-A/23 Artificial Intelligence in Healthcare; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) approve the report and action plan.

Artificial Intelligence in Healthcare

The use of Artificial Intelligence (AI) in healthcare has grown exponentially over the last few years. In October 2023, President Biden released a comprehensive Executive Order on the Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence which addresses AI in Healthcare.[1] In December 2023, the European Union (EU) released a draft regulation which aims to ensure that AI systems placed on the European market and used in the EU are safe and respect fundamental rights and EU values.[2] Numerous professional associations have developed policies around the use of AI in healthcare.[3, 4, 5] While AI promises great benefits to physicians and their patients, there are enormous risks if AI is not appropriately deployed.

In July 2023, the AOA House of Delegates requested that the AOA study the impact of AI in healthcare pertaining to five issues. The AOA was directed to present a report and action plan to the House of Delegates for the July 2024 HOD meeting. The five issues outlined in the resolution are presented below with accompanying commentary. The action plan/recommendations are then presented.

NOTE: Some professional associations refer to AI as Augmented Intelligence.[3] Augmented Intelligence seeks to enhance human capabilities by providing AI-powered tools and assistance. Artificial Intelligence aims to create autonomous systems that can perform tasks without human intervention. The use of the term “AI” in this document refers to both Artificial and Augmented Intelligence.

1. The potential benefits and risks of AI in healthcare for patients, healthcare professionals, and healthcare organizations.

The benefits of AI can be numerous. For osteopathic physicians and other healthcare professionals, AI can be used to assist with administrative tasks such as creating office notes, producing patient messages, and responding to document requests.[6] Other clinical applications include chart reviews, clinical decision support (CDS) tools, medical imaging analysis, development of patient resources, and research applications including literature review, document drafting, and data analysis.[7]

By removing administrative barriers for physicians, AI can benefit patients through increased time for engagement with physicians. AI can also improve patient education by providing clearer information on medical treatments which can lead to better outcomes.[8]

For healthcare organizations, AI can produce cost savings by streamlining operations, reducing inefficiencies, and enhancing resource allocation.

However, there are also numerous risks, such as generation of biased outcomes due to training on poor quality data, generation of inaccurate results through flaws in data sources used for model training, violation of patient privacy, and harm resulting from insufficient training on use of tools. One category of new technology where these risks are pronounced is in Large Language Models (LLMs). These are a relatively new type of AI that can generate text and perform other natural language processing tasks. LLMs are trained on large sets of data, such as programming languages, and can learn patterns and connections between words and phrases. Datasets used in training the LLM may be biased, out of date or otherwise flawed, which can result in the AI system producing unreliable or inaccurate information. If an LLM cannot find the correct answer to a query, it may falsify information and generate errors.[6] If not designed and implemented appropriately, AI systems can contribute to patient harm. LLMs are not currently regulated. Rules need to be developed to address data privacy, security, and transparency.

However, risks also exist in a broad range of AI technologies used in healthcare, both for treatment and in administrative functions. AI software that are “intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease…or are intended to affect the structure or any function of the body” are regulated as medical devices by the U.S. Food and Drug Administration.[9] Over 600 such tools are approved and used in clinical practice, improving patient care across the country.[10] These technologies include Clinical Decision Support (CDS), such as imaging analysis and predictive tools, as well as digital therapeutics, among other technologies. However, while these tools can significantly improve outcomes, their use also entails risk, such as biased outcomes through training on insufficient data or misuse through improper training.

Use of AI without appropriate clinician oversight may also result in liability for physicians. Physicians should be cautious with their reliance on AI tools for clinical uses.[6,11]

2. The ethical, legal, and social implications of AI in healthcare, including issues related to data privacy, bias, and transparency.

Issues of transparency, patient privacy and compliance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) must be addressed in AI systems to protect patient data. In the case of LLMs, a key concern is whether patient information entered into an LLM will remain secure and not subject to cybersecurity threats. It is also unclear if LLMs are covered by HIPAA. If use of patient medical information violates HIPAA compliance, this could result in penalties to physicians.[6]

Across all AI software, including FDA regulated software and other software, bias in the development of products poses risk to patient care AI models which are trained on biased data may increase existing biases in healthcare resulting in discriminatory outcomes.[7,12] Use of biased AI modules along with existing cultural and language barriers and bias may also worsen health outcomes for certain populations.[13] It is important to continue to provide culturally competent care to all patients with the widespread adoption of AI.

AI algorithms must be transparent and easy to interpret, so physicians and patients understand how decisions are being made. It is imperative that AI companies guarantee the confidentiality of patient data and provide policies on how data is collected, stored, and used.[4]

3. The impact of AI on the roles and responsibilities of healthcare professionals and the potential need for new training and education.

AI can automate routine tasks (such as data entry, administrative work, managing appointments and documentation) which will allow healthcare professionals to focus on patient care. Physicians and other healthcare professionals need to become more proficient in AI to understand its concepts, limitations, and ethical considerations. Training programs should cover AI applications, model interpretation, and responsible use. Combining medical knowledge with data science and technology expertise will become essential.

Medical education, training~~,~~ **AND** assessment ~~and licensure requirements~~ should incorporate AI literacy moving forward.

4. The potential impact of AI on healthcare costs and the healthcare system as a whole.

Studies predict that adoption of AI in healthcare can potentially lead to reductions in spending of 5-10%.[14] As outlined in the sections above, AI adoption could also improve healthcare quality, increase patient access, enhance patient experiences, and provide greater physician satisfaction. However, it will be crucial to overcome obstacles related to data privacy, liability, bias, transparency, interoperability, and regulatory compliance, and

ensure that AI use by insurers and others does not result in patient harm through delayed care or additional burden on physicians and patients.

5. The potential impact of AI on the practice of osteopathic medicine.

AI is uniquely positioned to help osteopathic medicine reach its full potential, as it can remove barriers to the patient-centered, hands-on approach DOs are trained to provide. As trusted sources of health information and guidance, osteopathic physicians will play an integral role in addressing the use of AI with their patients.

Osteopathic physicians:

- Focus on understanding the patient as a complete individual including body, mind, and spirit.
- Believe there is more to good health than the absence of pain or disease and provide a holistic and comprehensive approach to treating patients.
- Support each patient in achieving a high level of wellness by focusing on physical and behavioral health and the individual's environment.[15]

The incorporation of the tenets of osteopathic medicine,[16] Osteopathic Principles & Practice (OPP), and Osteopathic Manipulative Medicine (OMM) into AI tools will ensure that the osteopathic philosophy of treatment is applied to each patient encounter. To the extent that AI can "re-humanize" medicine by reducing administrative burden and the intrusion of technology upon the physician-patient relationship, osteopathic medicine is poised to thrive in this new environment.

Action Plan/Recommendations

1. The AOA will develop a comprehensive policy paper addressing the AOA's position on use of AI in healthcare.

2. The AOA, in partnership with other osteopathic organizations, will investigate partnerships with existing AI software development companies to integrate osteopathic data, language, and terminology, Osteopathic Principles & Practice (OPP) and Osteopathic Manipulative Medicine (OMM) into mainstream AI tools.

3. The AOA will monitor new and existing federal and state regulations/legislation on AI and provide comments on AOA's positions.

4. The AOA, working with other osteopathic partners, will create educational programs, materials, and tools to assist osteopathic students, residents, and physicians with navigating AI.

5. The AOA will develop member resources addressing comprehensive data management and security protocol such as guidelines on data collection, storage, processing, and sharing, ensuring compliance with HIPAA and other relevant privacy laws.

6. The AOA will maintain a list of experts in AI (DOs and others) to provide insights to the AOA on the status of AI implementation and issues affecting the ~~practice of~~ osteopathic **PROFESSION** ~~medicine~~ as they arise.

7. The AOA will continue to monitor AI use in healthcare and advocate for appropriate human oversight at all stages of AI development and use.

8. Th AOA will provide regular updates to the osteopathic profession on the use of AI in healthcare and its impact on the ~~practice of~~ osteopathic **PROFESSION** ~~medicine~~.

AI Use Disclosure: Microsoft Copilot was used in the development of some sections of this report, to confirm references and, in some cases, generate additional references. All references and text produced by Copilot were reviewed and edited by AOA Staff.

Action Item: Resolution H424-A/23 Artificial Intelligence in Healthcare

FISCAL IMPACT: $0

ACTION TAKEN: __Adopted as Amended_____

DATE: ____July 20, 2024_____

SUBJECT: HUMAN IMMUNODEFICIENCY VIRUS (HIV) TESTING – CLINICAL AND PUBLIC HEALTH APPLICATION OF - SOURCE: H424-A18

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, the Bureau of Osteopathic Research and Public Health (BORPH) submitted sunset resolution H413-A/23-SR-Human Immunodeficiency Virus (HIV) Testing – Clinical and Public Health Application of for policy H424-A/18 to the 2023 House of Delegates and recommended that it be reaffirmed; and

WHEREAS, the 2023 House of Delegates referred this policy back to BORPH to update the policy to address current guidelines; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy and added references to current CDC guidelines, now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED**.**

~~The American Osteopathic Association supports widespread application of HIV testing in the clinical setting particularly for those at risk for HIV infection as determined by physician evaluation; supports continued anonymous testing and counseling programs in public health facilities to maximize individual participation; supports mandatory HIV testing only for source patients, in cases of rape or incest, or in cases of an accidental exposure in patients who are at risk for HIV/AIDS; and supports the following recommendation of the American College of Osteopathic Obstetricians and Gynecologists.~~

THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) SUPPORTS THE U.S. CENTERS FOR DISEASE CONTROL AND PREVENTION (CDC) RECOMMENDATIONS THAT EVERYONE AGED 13-64, RECEIVE AT LEAST ONE HIV TEST AS A PART OF ROUTINE HEALTH CARE AND MORE FREQUENT TESTING, AT LEAST ANNUALLY, FOR THOSE AT HIGHER RISK.[1] PER THE CDC[2], INDIVIDUALS WHO MAY BENEFIT FROM AT LEAST ANNUAL SCREENING INCLUDE:

- **SEXUALLY ACTIVE GAY OR BISEXUAL MEN (SOME OF WHOM MAY BENEFIT FROM MORE FREQUENT TESTING, SUCH AS EVERY 3 TO 6 MONTHS)**
- **INDIVIDUALS WHO HAVE HAD SEX WITH AN HIV-POSITIVE PARTNER**
- **INDIVIDUALS WHO HAVE HAD MORE THAN ONE PARTNER SINCE THEIR LAST HIV TEST**

- **THOSE WHO HAVE SHARED NEEDLES OR ~~WORKS~~ EQUIPMENT TO INJECT DRUGS**
- **PEOPLE WHO HAVE EXCHANGED SEX FOR DRUGS OR MONEY**
- **INDIVIDUALS WHO HAVE ANOTHER SEXUALLY TRANSMITTED DISEASE, HEPATITIS, OR TUBERCULOSIS**
- **THOSE WHO HAVE HAD SEX WITH SOMEONE WHO HAS PARTICIPATED IN ANY OF THE ABOVE ACTIVITIES OR WITH SOMEONE WITH AN UNKNOWN SEXUAL HISTORY.**

A. Healthcare Workers

1. Healthcare workers have a minimal risk of acquiring HIV infection from patients[3, 4]~~;~~.~~however, this risk is much greater than the extremely remote possibility of transmission to patients~~.

2. Properly used universal precautions are effective in the prevention of transmission of bodily fluids between healthcare workers and patients and diminish the risk of infection.[3] Serologic testing of patients and/or healthcare workers for the purposes of infection control does not prevent the transmission of HIV infection nor enhance the effectiveness of universal precautions. The AOA supports and encourages patients who know they are HIV positive to inform their physician that they are HIV positive prior to receiving medical care.

3. CDC recommends that all HIV screening be voluntary, and opt-out (patient is notified that the test will be performed and consent is inferred unless the patient declines) vs. opt-in (test is offered to the patient who must explicitly consent to an HIV test, often in writing).[1, 5] The AOA opposes mandatory testing of patients and healthcare workers as there is no scientific data supporting the efficacy of such testing in the prevention of HIV transmission in the healthcare setting. ~~Should any state or the federal government legislate mandatory HIV testing for any group, the AOA is opposed to any such legislation which does not include the entire population because such legislation discriminates against certain groups.~~ The AOA affirms the right of HIV-infected individuals to practice their occupations in a manner which does not present any identifiable risk of transmission of disease and pledges itself to promote the ability of these individuals to continue productive careers so long as they can do so responsibly and safely.

4. The AOA supports programs for effective education and implementation of universal precautions in all healthcare settings.

B. Public and Patient Education

1. Although studies have demonstrated an improved awareness of HIV infection and its modes of transmission, myths and misconceptions persist.

2. The AOA supports public education programs that provide accurate, up-to-date and clearly stated information regarding HIV transmission. The AOA urges increased governmental appropriations for implementing public health measures to assist in halting the increasing incidence of HIV and AIDS.

3. Primary care physicians ~~occupy~~ **FILL** a central role in education of patients regarding preventative healthcare in general and are in an ideal position to serve a central role in HIV prevention.

4. The AOA encourages all osteopathic physicians to be knowledgeable in HIV risk evaluations and to incorporate candid and nonjudgmental assessment of related risk behaviors in routine patient care.

C. Medical Education

1. Osteopathic medical students and physicians in training are particularly vulnerable to the socioeconomic consequences of occupationally acquired HIV infection. The osteopathic profession bears a unique responsibility to provide for their maximum protection and social wellbeing.

2. All osteopathic medical schools and postdoctoral training programs should make available: life, health and disability insurance including coverage for occupationally acquired HIV infection; effective education and training in AIDS, infection control and universal precautions.

ACTION TAKEN: ___Adopted as Amended_ ___

DATE: ____July 20, 2024_____

SUBJECT: WARNING THE PROFESSION AND PUBLIC ABOUT THE POTENTIAL DANGERS OF KRATOM USE

SUBMITTED BY: Michigan Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS, Kratom is a substance derived from a tropical tree, Mitragyna speciosa, native to Southeast Asia traditionally used to alleviate pain, fatigue, enhance mood (1,2,4); and

WHEREAS, Kratom acts as an opioid agonist that acts on the mu opioid receptor, leading to stimulant effects (in low doses) and sedative effects (in high doses), which can lead to psychotic symptoms, and psychological and physiological dependence (1); and

WHEREAS, the use of Kratom in the United States increased 10-fold from 2010 to 2015 and is easily accessible without a prescription at smoke shops, gas stations, or on the internet; and

WHEREAS, according to the Substance Abuse and Mental Health Services Administration's National Survey on Drug Use and Health, an estimated 1.7 million Americans aged 12 and older used Kratom in 2021 to treat pain, anxiety, depression, opioid use disorder, and opioid withdrawal (2); and

WHEREAS, there is limited scientific evidence to support its safety and efficacy, and concerns have been raised about its potential for addiction, abuse, and adverse effects, including seizures, liver damage, and death; and

WHEREAS, in ~~2017~~ **2019** the ~~FDA~~ **CDC** issued a public health advisory about Kratom and the Drug Enforcement Administration (DEA) identified Kratom as a drug of concern, although it is still not classified or regulated as a controlled substance (3); and

WHEREAS, the Centers for Disease Control (CDC) recognizes Kratom as a potential ~~source~~ **CONTRIBUTOR** of fatal overdose (3); and

WHEREAS, ~~the American Medical Association (AMA) has a policy statement noting~~ it is inappropriate to authorize the sale, marketing or distribution of Kratom given there is no Federal Drug Administration (FDA) approval for any prescription or over-the-counter drug products containing Kratom or its two main chemical components mitragynine and 7-hydroxymitragynine (7-OH-mitragynine) (2,4); now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) promote learning opportunities for its members about Kratom, its current accessibility,

CULTURAL BACKGROUND AND CONSIDERATIONS, ~~and~~ use by the public, and concerns regarding safety and efficacy or lack thereof; and

RESOLVED, that the American Osteopathic Association (AOA) ~~write a policy statement~~ oppos**ES**~~ing~~ Kratom being available for marketing, purchase, or prescription until such time that the FDA and other relevant regulatory agencies evaluate its safety and appropriateness for sale; ~~and, be it further~~

~~RESOLVED, that this resolution be considered at the American Osteopathic Association (AOA) 2024 House of Delegates.~~

ACTION TAKEN: Adopted as Amended

DATE: July 20, 2024

SUBJECT: CONTINUOUS POSITIVE AIRWAY PRESSURE (CPAP), OBSTRUCTIVE SLEEP APNEA

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS, obstructive sleep apnea is a sleep disorder in which a person's breathing stops and starts during sleep caused by obstruction in the airway; and

WHEREAS, the estimated prevalence in North America obstructive sleep apnea is 15 to 30% in males and 10 to 15% in females; and

WHEREAS, the obstruction leads to decreased oxygen levels in the blood, causing fragmented sleep; and

WHEREAS, if left untreated, obstructive sleep apnea may worsen or even lead to multiple disease processes, including hypertension, heart disease, stroke, diabetes, and depression and the resulting daytime fatigue and somnolence negatively impacts our patients' quality of life; and

WHEREAS, unlike other medical conditions, such as infections or elevated blood pressure that are diagnosed when hospitalized, sleep apnea is not able to be treated at discharge with effective life-saving CPAP or BiPAP due to the current requirement for a completed polysomnogram or "sleep study"; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) advocates for measures to minimize the barriers to obtain life-saving CPAP or BiPAP at the time of hospital discharge for patients newly diagnosed with obstructive sleep apnea; and, be it further

RESOLVED, that the AOA advocates for an emergency grace period in which a CPAP or BiPAP machine could be provided until the sleep study is completed; and, be it further

RESOLVED, that the AOA pledges advocacy for discharge procedures that ensure access to needed treatments for our patients.

SUBJECT: AGAINST THE USE OF HIGH FRUCTOSE CORN SYRUP

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS, the American Osteopathic Association (AOA) is dedicated to improving public health and advocating for evidence-based policies; and

WHEREAS, High Fructose Corn Syrup (HFCS) is a highly processed sweetener derived from corn and commonly used in various food and beverage products; and

WHEREAS, the increased consumption of HFCS has been associated with various adverse health effects, ~~including obesity, metabolic syndrome, NASH (Nonalcoholic steatohepatitis), and an increased risk of chronic diseases such as type 2 diabetes and heart disease~~; and

WHEREAS, excessive consumption of added sugars, including HFCS, contributes to the rising rates of obesity and related health issues in the United States; and

WHEREAS, promoting healthier nutrition and reducing the intake of added sugars is crucial in preventing chronic diseases and improving overall public health; and

WHEREAS, there is a need for public awareness and education regarding the potential health risks associated with high fructose corn syrup; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) advocates for evidence-based policies that promote the reduction of high fructose corn syrup consumption and advocate for initiatives aimed at improving nutrition and public health; and, be it further

RESOLVED, that the AOA will collaborate with other medical organizations, public health agencies, and stakeholders regarding educational campaigns and resources to inform the public about the potential health risks of high fructose corn syrup

SUBJECT: RECOGNIZING BREAST IMPLANT ILLNESS (BII) AND PROMOTING INFORMED CONSENT FOR BREAST IMPLANT PROCEDURES

SUBMITTED BY: Ohio Osteopathic Association

REFERRED TO: Committee on Public Affairs

WHEREAS, breast augmentation procedures involving the insertion of breast implants have become increasingly common; and

WHEREAS, the American Osteopathic Association (AOA) recognizes the importance of ensuring patient safety and informed decision-making in all medical procedures; and

WHEREAS, recent evidence has emerged regarding the risks associated with breast implants, including the development of Breast Implant-Associated Anaplastic Large Cell Lymphoma (BIA-ALCL) and systemic symptoms collectively referred to as Breast Implant Illness (BIL); and

WHEREAS, the Food and Drug Administration (FDA) has issued a boxed warning advising patients and health care professionals about the risks associated with breast implants, including the potential for complications over time, the increased likelihood of additional surgeries, the association with BIA-ALCL, and the occurrence of systemic symptoms; and

WHEREAS, the AOA acknowledges the importance of providing patients with comprehensive information regarding the risks and benefits of breast implants to facilitate informed decision-making; now, therefore, be it

RESOLVED, that the American Osteopathic Association (AOA) recognizes Breast Implant Illness (BII) ~~as a legitimate concern~~ and encourages health care professionals to educate patients about the potential risks associated with breast implants, including the risk of developing BIA-ALCL and systemic symptoms; and, be it further

RESOLVED, that the AOA emphasizes the importance of obtaining informed consent from patients considering breast implant procedures, including a thorough discussion of the risks outlined in the FDA **LABELING RECOMMENDATIONS AND** boxed warning; and, be it further

RESOLVED, that the AOA advocates for efforts to enhance patient awareness of the risks associated with breast implants ~~and advocates for transparent communication between patients and health care providers throughout the decision-making process~~; and, be it further

~~RESOLVED, that the AOA calls upon health care professionals to prioritize patient safety and well-being by staying informed about emerging research and guidelines related to breast implant procedures; and, be it further~~

~~RESOLVED, that the AOA encourages health care professionals to engage in shared decision-making with patients, taking into account individual preferences, medical history, and the latest evidence-based recommendations; and, be it further~~

~~RESOLVED, that the AOA reaffirms its commitment to promoting ethical and patient-centered care in all aspects of medicine, including cosmetic procedures such as breast augmentation with implants~~.

SUBJECT: ADDRESSING THE COMPROMISED SAFETY OF HEALTHCARE WORKERS PRACTICING IN AREAS OF CONFLICT AND THE RESULTING THREAT TO HEALTHCARE INFRASTRUCTURE

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, over the last two decades, military powers have attacked healthcare workers and infrastructure with increasing impunity in violation of the regulations set forth by the Geneva Convention, the Rome Statute and International Humanitarian Law (IHL) that specify the protection of healthcare workers and infrastructure[1]; and

WHEREAS, Article 17 of the Fourth Geneva Convention declares the right of passage of medical personnel and medical equipment to occupied areas, while Article 20 demands respect and protection for any personnel involved in the operation and administration of civilian hospitals, including the transport of wounded civilians[2]; and

WHEREAS, there have been over 6,600 violent attacks against health care systems within the last ten years leading to destruction or damage of 3,420 medical facilities, 1,732 healthcare transportation units, and 1,367 medical supply units as well as injury or death to 1,334 patients and 3,404 medical personnel during wartime conflicts across 21 countries and territories[3]; and

WHEREAS, deliberate destruction of healthcare infrastructure has resulted in decreased availability of adequate healthcare services and chronic medical management leading to even further civilian death, disease, and epidemic outbreak[4]; and

WHEREAS, the AOA supports the protection of physicians and healthcare workers through advocating for congressional endorsement of the Safety from Violence for Healthcare Employees (SAVE) Act; now therefore be it

RESOLVED, that the American Osteopathic Association (AOA) affirms~~, and advocates for~~ the right of physicians globally to ethically practice medicine without fear of persecution or personal danger in any and all situations, including but not limited to wartime and civil unrest; and, be it further

RESOLVED, that the AOA ~~urge~~ **ADVOCATE** for the unimpeded delivery of humanitarian aid, highlight the need for security of medical personnel

36 across all conflict zones, and denounce the targeting of healthcare
37 systems including the denial of medical services in conflict zones.

SUBJECT: REGULATION OF CANNABIS EDIBLES

SUBMITTED BY: Mississippi Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, the American Association of Poison Control Centers shows more than 7,000 confirmed cases of kids younger than six years old who have eaten cannabis edibles were reported to the nation's poison control centers between 2017 and 2021; and

WHEREAS, edibles are often packaged to look like candy or cookies and children unaware of the risks may find them appealing; and

WHEREAS, consuming too much cannabis can lead to serious health problems in children including confusion, hallucinations, tachycardia and vomiting, and in severe cases children can experience trouble breathing or even coma; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) work with the Food and Drug Administration to strengthen how cannabis manufacturers can advertise their products, including regulations that ensure the packaging does not appeal to children; and, be it further

RESOLVED, that the AOA propose public awareness campaigns aimed at informing the general population, especially parents and guardians, about the risks associated with edible cannabis and the importance of safe storage and handling; and, be it further

RESOLVED, that the AOA emphasize the importance of childproof packaging for all cannabis products, along with advocating for stricter regulations to enforce this requirement.

SUBJECT: AOA ARTICLES OF INCORPORATION

SUBMITTED BY: Committee on AOA Governance and Organizational Structure

REFERRED TO: Constitution and Bylaws

WHEREAS, the AOA's Articles of Incorporation were first filed in 1923 and last updated in 1938;

WHEREAS, the AOA's Committee on AOA Governance and Organizational Structure (CAGOS) was tasked with reviewing the AOA Articles of Incorporation to align with current practices and requirements;

WHEREAS, CAGOS' work, which was done in conjunction with internal and external legal counsel, reviewed the Articles of Incorporation and recommended the following: (a) the purposes clause be expanded to clarify that board certification activities of AOA were related to AOA's tax-exempt mission; (b) that the language on the size of the Board of Trustees be directed to the AOA's Constitution and Bylaws; and (c) that other updates be made to conform to current legal requirements or IRS best practices that had evolved since the Articles of Incorporation were last updated; and

WHEREAS, the above recommendations have been incorporated into the attached Amended and Restated Articles of Incorporation of the American Osteopathic Association; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) approve and adopt the attached Amended and Restated Articles of Incorporation of the American Osteopathic Association.

ACTION TAKEN: ___Adopted as Amended_____

DATE: _July 20, 2024_____

Amended and Restated Articles of Incorporation
of
American Osteopathic Association

Article 1. Name of Corporation
American Osteopathic Association (the "Organization")

Article 2. Registered Agent
Corporate Creations Network, Inc.
1320 Tower Road
Schaumburg, IL 60173

Article 3. Board of Trustees
The Organization shall be managed by members of a governing board of directors known as the Board of Trustees ("Board"). The number of members of the Board shall be as set forth in the Constitution and Bylaws of the Organization.

Article 4. Purposes
The purposes for which the Organization is organized shall be to improve and promote public health and improve public health outcomes by (i) maintaining high standards of osteopathic education and advancing the profession's knowledge of the prevention, diagnosis, and treatment of disease; (ii) facilitating the continuous education of osteopathic physicians to advance their knowledge, practice, skill, compassion, and professionalism; (iii) stimulating original research and investigation and disseminating the results of such work for the education and improvement of the profession and the ultimate benefit of the general public; (iv) certifying physicians in medical specialties to ensure that such physicians have the necessary knowledge, education, and clinical experience, as well as to ensure that such physicians continue to have the necessary competence to practice medicine for the benefit of the general public; and (v) promoting the continual evolution and advancement of the osteopathic principles and the research of Andrew Taylor Still regarding osteopathic medicine. The Organization also shall be permitted to pursue other related purposes permissible for organizations exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code (the "Code") (or the corresponding section of any future federal tax code).

Article 5. Other Provisions
The Organization shall not have authority to issue capital stock.

No part of the net earnings of the Organization shall inure to the benefit of, or be distributable to, its Directors, officers, employees, or other private persons, except that the Organization shall be authorized and empowered to pay reasonable compensation for services rendered and to make payments and distributions in furtherance of the purposes set forth in Article 4 hereof. Notwithstanding any other provision of these Articles of Incorporation, the Organization shall not carry on any other activities not permitted to be carried on by an Organization exempt from federal income tax under Section 501(c)(3) of the Code (or the corresponding section of any future federal tax code).

Upon the termination or dissolution of the Organization, any assets lawfully available for distribution, after paying or adequately providing for the debts and obligations of the

Organization, shall be distributed to one or more qualifying organizations described in Section 501(c)(3) of the Code (or the corresponding section of any future federal tax code), such organization(s) have purposes which, at least generally, include one or more purposes similar to the Organization.

Article 6. Miscellaneous

The Organization is not a Condominium Association as established under the Illinois Condominium Property Act, a Cooperative Housing Corporation as defined in Section 216 of the Code (or the corresponding section of any future federal tax code), or a Homeowner's Association which administers a common-interest community as defined in subsection (c) of Section 9-102 of the Illinois Code of Civil Procedure.

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION CONSTITUTION – ARTICLE IX ***(Second Read)***

SUBMITTED BY: Committee on AOA Governance and Organizational Structure (CAGOS)

REFERRED TO: Committee on Constitution and Bylaws

---

1 WHEREAS, the procedure for amending the Constitution of the American
2 Osteopathic Association (AOA), as described in Article IX of the Constitution
3 requires that all proposed amendments be presented to the House of
4 Delegates and filed with the Chief Executive Officer at the annual meeting in
5 the year prior to its presentation to the House of Delegates for action; and

6 WHEREAS, the Board of Trustees Committee on AOA Governance and
7 Organizational Structure has undertaken a review of the AOA's Constitution
8 and Bylaws and intends to present proposed changes to Article IX -
9 Amendments - of the Constitution at the 2024 House of Delegates annual
10 meeting; now, therefore be it

11 RESOLVED, that the official meeting record reflect that a first reading of the
12 following amendment has been presented at the July 2023 annual meeting of
13 the AOA House of Delegates and filed with the Chief Executive Officer of the
14 AOA so that it can be presented for action at the 2024 House of Delegates:

15 **AOA Constitution**

16 Article IX – Amendments
17 This Constitution may be amended by the House of Delegates at any annual
18 meeting by a two-thirds vote of the total number of delegates accredited for voting,
19 provided that such amendments shall have been presented to the House and filed
20 with the Chief Executive Officer at a previous annual meeting, who shall cause them
21 to be distributed by U.S. mail or electronic communication to each divisional
22 **SOCIETY** and **AFFILIATED ORGANIZATION** ~~specialty society~~ entitled to ~~and~~
23 send[1] voting representatives to the House of Delegates, posted on the AOA's
24 website, and **COMMUNICATED IN AN OFFICIAL PUBLICATION OF THE**
25 **ASSOCIATION** ~~published ON-LINE in the on-line edition of *THE DO* *The Journal of*~~
26 ~~*Osteopathic Medicine*~~ not less than two months nor more than four months prior to
27 the meeting at which they are to be acted upon.

---

[1] The word 'and' in line 22 was a typo and should have been 'send' to make the sentence grammatically correct with no additional wording. The editorial amendment has been made for the second read.

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION BYLAWS – ARTICLE I: SECTION 1 AND 3

SUBMITTED BY: Committee on AOA Governance and Organizational Structure (CAGOS)

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, it is necessary that AOA's Bylaws provide a clear definition for both when a Charter may be issued and when it may likewise be suspended or revoked; and

WHEREAS, the Bylaws currently do not detail when a Charter may be suspended or revoked and for the purposes of clarifying this process; and

WHEREAS, the Committee on AOA Governance and Organizational Structure developed a Charter Suspension and Revocation process outlined within this resolution in response to the 2023 House of Delegates referred Resolution H511-A/23; now, therefore be it

RESOLVED, that the AOA House of Delegates approve the following amendments to:

AOA Bylaws

Article I – Divisional AND District SOCIETIES and Affiliated ~~Societies~~ ORGANIZATIONS

Section 1-Divisional Societies

Any state, territorial, provincial or foreign osteopathic organization, or an organization of osteopathic physicians serving in the uniformed services of the United States, which may desire to become a divisional society of the American Osteopathic Association and be chartered as a divisional society of this Association, shall apply on a prescribed form, submit evidence that its Constitution, Bylaws, and Code of Ethics generally conform to those of this Association, and maintain an organizational structure which shall generally conform to that of this Association.

Upon such application, the Chief Executive Officer and the Board of Trustees shall investigate and, finding satisfactory proof, shall recommend to the House of Delegates that a charter be issued. The Association shall not issue such a charter to more than one divisional society in a given **GEOGRAPHICAL** area**. THE ASSOCIATION ALSO HAS THE AUTHORITY TO REVOKE OR SUSPEND THE CHARTER OF ANY DIVISIONAL SOCIETY. THE BOARD OF TRUSTEES, UPON TWO-THIRDS AFFIRMATIVE VOTE, MAY SUSPEND A CHARTER FOR A PERIOD OF TIME UNTIL THE NEXT REGULARLY SCHEDULED MEETING OF THE HOUSE OF DELEGATES. THE HOUSE OF DELEGATES MAY, BY A TWO-THIRDS CONSENT OF THOSE MEMBERS PRESENT, PROVIDED TWO-THIRDS OF THE SEATED DELEGATES ARE IN ATTENDANCE, REVOKE A CHARTER. THE AOA SHALL OUTLINE POLICIES AND PROCEDURES FOR ANY SUCH SUSPENSIONS**

AND/OR REVOCATIONS. SUCH POLICIES MUST, AT A MINIMUM, PROVIDE THAT A SUSPENSION OR REVOCATION SHALL NOT TAKE PLACE UNLESS THERE IS GOOD CAUSE SHOWN AND THAT THE AFFILIATED ORGANIZATION MUST FIRST BE PROVIDED WITH NOTICE AND DUE PROCESS PRIOR TO ANY SUCH SUSPENSION AND/OR REVOCATION DECISION.

Section 3-Affiliated Organizations

Upon application from any organization for a charter as an affiliated organization, the Board of Trustees and the Chief Executive Officer shall investigate such organization and, upon satisfactory proof of a general agreement in policy and governing rules with those of this Association, shall recommend to the House of Delegates the issuance of such a charter. The Association shall not issue a charter to any organization, which duplicates the function or prerogatives of any present affiliated organization. ~~All organizations which have as their membership osteopathic physicians in good standing with the AOA, whether holding a current charter of affiliation or not, shall have as a medium of communication all publications of the AOA.~~ **THE ASSOCIATION ALSO HAS THE AUTHORITY TO REVOKE OR SUSPEND THE CHARTER OF ANY AFFILIATED ORGANIZATION. THE BOARD OF TRUSTEES, UPON TWO-THIRDS AFFIRMATIVE VOTE, MAY SUSPEND A CHARTER FOR A PERIOD OF TIME UNTIL THE NEXT REGULARLY SCHEDULED MEETING OF THE HOUSE OF DELEGATES. THE HOUSE OF DELEGATES MAY, BY A TWO-THIRDS CONSENT OF THOSE MEMBERS PRESENT, PROVIDED TWO-THIRDS OF THE SEATED DELEGATES ARE IN ATTENDANCE, REVOKE A CHARTER. THE AOA SHALL OUTLINE POLICIES AND PROCEDURES FOR ANY SUCH SUSPENSIONS AND/OR REVOCATIONS. SUCH POLICIES MUST, AT A MINIMUM, PROVIDE THAT A SUSPENSION OR REVOCATION SHALL NOT TAKE PLACE UNLESS THERE IS GOOD CAUSE SHOWN AND THAT THE AFFILIATED ORGANIZATION MUST FIRST BE PROVIDED WITH NOTICE AND DUE PROCESS PRIOR TO ANY SUCH SUSPENSION AND/OR REVOCATION DECISION.**

ACTION TAKEN: Adopted as Amended

DATE: July 20, 2024

AOA Charter for Suspension and/or Revocation Process
Component 4 of the Organizational AOA Charter Process
Policy Number: P6-10/2022

- Develop the process for suspending and/or revoking a charter and reference the process document in the AOA Administrative Guide
    - The AOA charter of an Affiliate Organization or Divisional Society may be suspended and/or revoked when done (a) according to the procedures outlined below and in AOA Bylaws; and (b) when doing so is in the best interests of the profession, including the remaining Affiliate Organizations and Divisional Societies collectively.
    - Suspension:
        - A suspension may only occur when the Affiliate Organization or Divisional Society's continuation of their charter is detrimental to the profession.
        - A suspension should only occur when there is an imminent need for AOA to act that cannot be extended to the next House of Delegates meeting.
        - A suspension may only occur if the Affiliate Organization or Divisional Society is first provided written notice of the reason for the suspension and provided a reasonable opportunity to respond (both in writing and through a presentation to the AOA Board of Trustees).
        - Only after the above process has been followed, the AOA Board of Trustees may vote to suspend the charter of an Affiliate Organization or Divisional Society upon the affirmative vote of two-thirds (2/3) of the Board of Trustees.
        - The Affiliate Organization or Divisional Society may appeal this decision to the House of Delegates at the next regularly scheduled meeting. In the interim, the Affiliate Organization or Divisional Society can continue to hold its seat at the House of Delegates and remain a CME sponsor, if applicable.

    - Revocation:
        - A revocation should only occur when the Affiliate Organization or Divisional Society's continuation of their charter is detrimental to the profession.
        - A revocation should only occur if the Affiliate Organization or Divisional Society is first provided written notice of the reason for the revocation and provided a reasonable opportunity to respond (both in writing and through a presentation to the AOA House of Delegates).
        - Only after the above process has been followed, the AOA House of Delegates may vote to revoke the charter of an Affiliate Organization or Divisional Society upon the affirmative vote of the House of Delegates by a two-thirds (2/3) consent of those members present, provided two-thirds of the seated delegates are in attendance.
        - Once an Affiliate Organization or Divisional Society's charter has been revoked, it shall cease its affiliation as such and any related benefits on account of that status.

SUBJECT: AMENDMENTS TO THE AMERICAN OSTEOPATHIC ASSOCIATION BYLAWS – ARTICLE V: SECTION 11 - REPRESENTATION OF OSTEOPATHIC POSTDOCTORAL TRAINEES AND/OR NEW PHYSICIANS IN PRACTICE

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Constitution and Bylaws Committee

WHEREAS, Article V - Section 11 of the American Osteopathic Association (AOA) Bylaws designates that three seats in the House of Delegates represent. Osteopathic postdoctoral trainees and/or new physicians in practice; and

WHEREAS, the AOA Bylaws require these three delegates be selected by the Bureau of Emerging Leaders (BEL); and

WHEREAS, the AOA Bylaws further require that one of these three delegate positions be reserved for physicians who are in a fellowship postdoctoral training program; and

WHEREAS, the position designated for a physician who is a fellowship program has only been filled twice since 2019 due to multiple barriers which include but are not limited to the timing of the AOA's House of Delegates, leaving postdoctoral trainees and new physicians in practice with less representation in the House of Delegates ; and

WHEREAS, The BEL was formed in 2015 after the merger of the Council of Student Affairs, Council of Interns and Residents, and the Council of New Physicians in Practice. Subsequently, three seats at the HOD were granted to the BEL. In 2018 it was approved by the House of Delegates with resolution number H503-A/18 to have a reserved spot specifically for physicians who are in a fellowship postdoctoral training program. Since 2019, only 2 fellows have participated as delegates for the BEL. Potential barriers include timing of the House of Delegates which coincides with the start of many fellowship programs or those in fellowships recently completed their fellowships in June. Furthermore, individuals serving as a BEL delegate shall not concurrently serve as a delegate for any other group at the AOA House of Delegates. Given these potential barriers, it has proven difficult to secure a fellow for the dedicated delegate position. The BEL will continue attempting to fill the third seat with a fellow, but backup processes need to be in place. As the number of Osteopathic Postdoctoral Trainees and New Physicians in Practice continue to grow, it would continue to benefit the BEL constituents to have three delegates present at the Annual House of Delegates; now, therefore be it

RESOLVED, that the AOA approves the following proposed amendments to the AOA's governing documents and requests that the AOA Chief Executive Officer take the necessary steps to arrange for publication of this proposed amendment and submission of a resolution to the July 2024 House of Delegates meeting that, if approved, would amend the AOA's Bylaws as follows:

AOA Bylaws

Article V - House of Delegates
Section 11- Representation of Osteopathic Postdoctoral Trainees and/or New Physicians in Practice

Osteopathic postdoctoral trainees and/or new physicians in practice may be represented in the House of Delegates by three individuals who, at the time of the annual meeting, shall be enrolled in postdoctoral training programs or currently a new physician in practice as defined by the association. At least one of the three individuals shall be **A NEW PHYSICIAN IN PRACTICE, AND AT LEAST ONE SHALL BE** enrolled ~~in an accredited fellowship training program and at least one of the three individuals shall be enrolled~~ in an accredited residency program.

Background Information: Provided by AOA Staff
Current AOA Policy: As noted above.

SUBJECT: AOA BOARD, BUREAU, COMMITTEE AND COUNCIL MEMBER REPRESENTATION

SUBMITTED BY: Association of Military Osteopathic Physicians and Surgeons

REFERRED TO: Committee on Constitution and Bylaws

---

1 WHEREAS, the AOA currently requires AOA Membership for participation on any
2 national AOA Board, Bureau, Committee and Council; and

3 WHEREAS, currently there are members of the Board of Trustees, Bureaus,
4 Committees and Councils representing the Military, State Affiliates, and
5 Specialty Colleges, who are not members of said Military Affiliate, State
6 Affiliate or Specialty College; therefore, be it

7 RESOLVED, that the American Osteopathic Association (AOA) ensures that all
8 appointed/elected Board, Bureau, Committee and Council members who are
9 representing a specific Affiliate, State Affiliate or Specialty College be a
10 member of the respective Affiliate/State Affiliate/Specialty College.

Background Information: Provided by AOA Staff
Current AOA Policy:

AOA Bylaws at Article IX – Departments, Bureaus, and Committees

The Board of Trustees and House of Delegates, consistent with the powers given to it by these Bylaws, shall establish and determine the duties of departments, bureaus, councils, commissions, committees, and task forces necessary to further the policies of the Association. The Association's departments shall include the Departments of Affiliate Relations, Finance, Education, Governmental Affairs, Membership, and Research and Public Health. The activities of all departments, bureaus and committees shall, so far as possible, be executed in close cooperation with the Chief Executive Officer. Upon the expiration of the terms of office of chairs and members of the departments, bureaus, or committees, all records of the same shall be delivered by the chairs to the Chief Executive Officer. All employed staff of departments, bureaus, and committees in the offices shall be under the jurisdiction of the Chief Executive Officer.

Except where positions are designated for public members (i.e., non-physicians serving on a bureau or committee who are intended to represent and speak for the interests of the public and consumers of osteopathic medical services), membership in both the AOA and a divisional society shall be a requisite for qualification for service on a bureau, council, or committee of the Association, however selected, if the incumbent shall be an osteopathic or allopathic physician.

SUBJECT: AOA RULES AND GUIDELINES ON PHYSICIANS' PROFESSIONAL CONDUCT (H505-A/19)

SUBMITTED BY: Ethics Review and Board Appeals Committee

REFERRED TO: Committee on Constitution & Bylaws

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Ethics Review and Board Appeals Committee have reviewed the policy; and

WHEREAS, the Ethics Review and Board Appeals Committee recommends the policy be amended by updating the name of the committee that reviews the policy; now, therefore be it

RESOLVED, that the Ethics Review and Board Appeals Committee recommends that the following policy be REAFFIRMED AS AMENDED**.**

AOA Rules and Guidelines on Physicians' Professional Conduct

Policy Statement

The American Osteopathic Association (AOA) supports the AOA Rules and Guidelines on Physicians' Professional Conduct and recognizes that it is a separate and distinct document from the AOA's Code of Ethics.

American Osteopathic Association: Rules and Guidelines on Physicians' Professional Conduct

<u>Professionalism and Physician Responsibilities</u>

Professionalism is a core competency expected of all physicians. Physicians are among the most highly educated and trained professionals in our society and should enjoy the respect of their peers and the community. Society expects them to perform various roles. As healthcare providers, they diagnose and treat patients; as advisors, they provide patients with an understanding of their health status and the potential consequences of decisions regarding treatment and lifestyles; as advocates, physicians communicate with patients, their caregivers, and their health insurers the needs of the patient; and as counselors, they listen to their patients and discuss their condition with family members and others involved in health-care decision-making. Physicians are entrusted by their patients and their patients'

families with private and confidential information, much of which is related to healthcare, but frequently includes other personal details.

Osteopathic physicians, in order to enjoy the continued respect and trust of society, recognize the responsibilities and obligations they bear and in order to maintain their status as professionals, must act accordingly. Medical ethics includes many tenets that should guide osteopathic physicians in their professional and personal activities. Although ethics and professionalism encompass broad concepts, some of the recognized elements are:

- Non-maleficence – first, do no harm
- Acting as a positive role-model
- Displaying respect in interactions with others
- Legal and ethical behavior
- Appropriate management of potential conflicts of interest
- Beneficence – a physician should act in the best interest of the patient/altruism/placing the needs of the patient first
- Autonomy – the patient has the right to refuse or choose their treatment
- Dignity – the patient (and the medical professional involved with their care) has the right to dignity, truthfulness and honesty
- Participation in self-evaluation programs and acceptance of constructive criticism from others.

The AOA's Code of Ethics offers rules to guide physicians in their interactions as physicians with their patients, with society, and with the AOA. This document is intended to supplement the Code of Ethics by providing rules and guidance for physicians' conduct as professionals in the broader context beyond the traditional role in the delivery of care. Some of the Rules and Guidelines are mandatory (i.e., "shall" or "shall not"), while others are permissive (i.e., "may," "should," "should not" or "may not") and recognize a physician's discretion to assess the specific context and situation and exercise professional judgment.

Finally, the Rules and Guidelines are designed by the AOA to provide guidance to physicians in appropriate professional behavior and to provide a structure for regulating conduct. Any assessment of a physician's conduct must be made with due consideration to the facts and circumstances that existed at the time of the conduct in question and recognize that a physician may have had to act based upon uncertain or incomplete information. The Rules and Guidelines are not intended to be a basis for civil liability. Rather, perceived failure of a physician to comply with an obligation or prohibition imposed by the Code of Ethics or these Rules and Guidelines is a basis for invoking the AOA's ~~disciplinary process through the Bureau of Membership's Subcommittee on Ethics.~~ **ETHICS REVIEW AND BOARD APPEALS COMMITTEE.**

1. A physician's conduct shall be consistent with the requirements of the law, whether providing medical/professional service to patients or in conducting business and personal affairs.

2. Physicians should use their status as professionals only for legitimate purposes and not to take advantage of economic or social opportunities or to harass or intimidate others.
3. A physician has an obligation to pursue a patient's best interests and to be an advocate for the patient. In so doing, physicians shall conduct themselves in a civil manner. When appropriate, physicians should disclose and resolve any conflict of interest that might influence decisions regarding care.
4. Patients may come from any of a broad spectrum of cultures and beliefs. Physicians should conduct themselves with appropriate respect for their patients' social and cultural needs and provide necessary care without regard to gender, race, color, religion, creed, age, marital status, national origin, mental or physical disability, political belief or affiliation, veteran status, gender identity or sexual orientation.
5. Physicians are allowed limited autonomy to govern conduct within their own profession through participation on state licensing boards, hospital credentialing committees and in peer review processes. Physicians should fully participate in self-regulation by setting, maintaining, and enforcing appropriate practice standards. Regulations and rules with respect to healthcare delivery shall be developed with the best interests of patient care in mind rather than advancing private interests or protecting friends or colleagues from adverse action.
6. Physicians are responsible for observance of the Code of Ethics and these Rules and Guidelines on Professional Conduct. While compliance depends primarily upon understanding of and voluntary compliance with these obligations, physicians should also make efforts to secure their observance by other physicians through expression of formal or informal peer opinion or, when necessary, invocation of disciplinary proceedings. Where a protected peer review process is available, adverse events and medical errors should be fully disclosed.
7. Physicians should be aware of disparities in medical care within the United States and internationally. Where possible, physicians should assist those less fortunate in securing access to appropriate medical care.

SUBJECT: ETHICS OF PUBLICLY SUPPORTING VIOLENCE – AMENDMENT TO THE AOA CODE OF ETHICS

SUBMITTED BY: Florida Osteopathic Medical Association

REFERRED TO: Committee on Constitution and Bylaws

WHEREAS, on October 7, 2023 thousands of people were murdered by the efforts of a known terrorist organization; and

WHEREAS, in response to this event many organizations, including physician organizations denounced the intentional targeting and killing of persons on the basis of their religion or national origin; and

WHEREAS, some individual physicians publicly announced their support for these acts under the idea that the acts were justified political actions; and

WHEREAS, as leaders in society the words that physicians speak matter. While we recognize and value freedom of speech, the use of speech to foment violence is not, and should not be protected; and

WHEREAS, the Osteopathic Oath, to which all members of our profession pledge, notes that, “I will be ever vigilant in aiding in the general welfare of the community, sustaining its laws and institutions, not engaging in those practices which will in any way bring shame or discredit upon myself or my profession”; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) Code of Ethics shall be amended to read:

Section 13: A physician shall respect the law. When necessary, a physician shall attempt to help to formulate the law by all proper means in order to improve patient care and public health. **IT IS NOT ETHICAL FOR A PHYSICIAN TO COMMIT, ENDORSE, OR LEND SUPPORT TO VIOLENCE OR COMMIT, ENDORSE, OR LEND SUPPORT TO ORGANIZATIONS THAT COMMIT, ENDORSE OR SUPPORT VIOLENCE IN ORDER TO ENACT CHANGES IN THE LAW OR TO PROMOTE OTHER POLITICAL CHANGE.**

Standing Against Restrictive Housing and Solitary Confinement for Juvenile Inmates of Prison Systems in the US

Policy Statement - White Paper

Opposing Restrictive Housing and Solitary Confinement for Juvenile Inmates of Prison Systems in the U.S.

Introduction

Every day ~~approximately~~ ~~53,000~~ **~~48,000~~** **AN ALARMING NUMBER OF** youth under the age of 18 are ~~sent to~~ **PLACED IN** correctional facilities as a result of juvenile or criminal justice involvement.[1] Correctional facilities generally offer limited medical and mental health care, resulting in harmful health outcomes, such as increased violence, mental illness, cognitive impairment, and increased risk of disease. It is not uncommon for incarcerated youth to be housed in solitary confinement or restrictive housing while in these facilities. The use of solitary confinement further compromises the quality of the health care detainees receive, and results in long-lasting, adverse physical, psychological, and social effects. Thus, the use of such housing has become a major public health concern in the U.S.

For many individuals who are committed to improving health outcomes for juvenile youth, there has been an urgent need for interventions and reformation programs that encourage humane alternatives and movement towards the abolishment of juvenile solitary confinement in the U.S. In fact, several professional and human rights organizations have taken positions in favor of limiting or eliminating solitary confinement.

The purpose of this paper is to discuss the frequency and impact of solitary confinement (isolation) on juvenile well-being and to present the AOA's position opposing restrictive housing and solitary confinement for juvenile inmates in the U.S.

Solitary Confinement

The term, solitary confinement, is often used interchangeably with the terms segregation, isolation, and restrictive housing. The National Commission on Correctional Health Care refers to solitary confinement, or isolation, as the housing of an adult or juvenile with minimal to rare meaningful contact with other individuals. Additionally, the United States Department of Justice defines restrictive housing as any type of detention that involves one of the following:[2]

1. Removal from the general inmate population, whether voluntary or involuntary.
2. Placement in a locked room or cell, whether alone or with another inmate.
3. Inability to leave the room or cell for the vast majority of the day, typically 22 hours or more.

There are several forms of restrictive housing. High security facilities that contain solitary confinement units are called supermaximum ("supermax") facilities.[3] These facilities house inmates who have engaged in violent behavior aimed at other inmates or staff in another institution or those who were not compliant at lower-security prisons. Some supermax facilities also house inmates in protective custody or those considered to be a "special population", such as prisoners on death row. In addition to these facilities, there are facilities that contain solitary confinement cells, known as segregated housing or secured housing units, in institutions that are not considered supermax facilities.[3]

By design, solitary confinement restricts human contact and environmental simulation. The facilities commonly have minimal natural light, leaving detainees exposed to constant artificial light, and inmates experience punitively distasteful meals, have limited personal items, and are denied opportunities to communicate with others.[3]

Public Health Implications

Though data on the frequency and duration of solitary confinement is scant, the Office of Juvenile Justice and Delinquency Prevention reports that half of the individuals in the juvenile penal system were isolated for more than four hours at a time.[4] Exact statistics are not readily available, since the federal government does not require prisons to report the number of juveniles in solitary confinement, the frequency, or the amount of time they are isolated.[3]

In some jurisdictions, youth may be detained in solitary confinement for several weeks or months. In addition to the harms associated with adults in solitary confinement, youth may also lack educational options or interaction with their families, and they may experience the beginning of mental illnesses that commonly occur during late adolescence.[5]

Many studies have underscored the troubling realities of physical and mental health outcomes directly related to the increase of solitary confinement. While incarceration alone yields unintentional but inevitable consequences on wellness, especially mental health issues, solitary confinement amplifies the risk of anxiety, depression, psychosis and self-harm, as supported by both the American Psychological Association and American Academy of Child and Adolescent Psychiatry.[6]

The practice of placing youth in solitary confinement is especially troubling since children and young adults are still developing physically, mentally, and socially and are more vulnerable to the noted long-lasting negative effects of solitary confinement. Accordingly, mental health problems are more prevalent among youth inmates compared to adult inmates, with 95% of youth in the juvenile penal system having at least one mental health problem, and 80% of youth developing more than one mental health illness.[7]

Furthermore, the Centers for Disease Control and Prevention reports that **IN 2021,** suicide **WAS THE 2ND LEADING CAUSE OF DEATH FOR PEOPLE AGED 10-14, AND 20-34.**[8] ~~is the 3rd leading cause of death for youth, resulting in approximately 4,600 deaths per year.~~[8] However, young people in prisons are 18 times more likely to commit suicide than their counterparts in the community.[7] Thus, isolation of juveniles increases the risk of both mental illness and suicide for adolescents and young adults. Thus, concerns about the use of solitary confinement have mounted.

In a July 14, 2015 speech at the NAACP National Convention, President Barack Obama announced that he had asked Attorney General Loretta Lynch to conduct a review of "the overuse of solitary confinement across American prisons." The President directed that the focus not only on understanding how, when, and why correctional facilities isolate certain prisoners from the general inmate population, but also that it includes strategies for reducing the use of this practice throughout our nation's criminal justice system.

Among other findings, the study report summary noted that the implementation of solitary confinement and the length of time an inmate is isolated is the discretion of correctional officers, not decided by a court or jury. The report also recommended that the Bureau end the practice of placing juveniles in restrictive housing, pursuant to the standards proposed in the Sentencing Reform and Corrections Act of 2015.[2]

The United Nations has also taken a stance against solitary confinement and considers isolation within juvenile facilities a form of torture. The U.N. has encouraged the U.S. to create federal and state legislature ratifying the Convention on the Rights of the Child, an international agreement set forth by the U.N. to protect children from abuse. To date, only seven U.S. states have placed any prohibition on juvenile solitary confinement.[3]

The American Academy of Child and Adolescent Psychiatry highlights the code of ethics surrounding the psychiatrist's responsibility to not only reduce the harmful impacts of the behavior of others but the community and social effects as well.[7] Often, correctional facilities have a culture of their own that produces a different code of ethics for the survival and safety of juvenile inmates; this can create a dilemma for clinicians as it relates to providing quality care to inmates.

~~**Racial and Gender Disparities**~~

Within the issue of solitary confinement in juvenile detention facilities, there is a concern that certain races/ethnicities are disproportionally exposed to these practices than youth from other races/ethnicities. ~~Across the nation, the youth rate of incarceration is **74**152 per 100,000. However, the Black youth placement rate is nearly three times higher than the national rate at **228** 433 per 100,000. Comparatively, the White youth placement rate is **49** 86 per 100,000 nationally. According to the Department of Justice, Black youth are five times more likely to be detained compared to Whites. When examining the system further, Black males and Native American females are an over-represented population in the U.S. juvenile prison system. Currently, in the U.S., Black males under the age of 18 make up~~

~~**15%**14% of the total population; however, **42%**43% of Black males under 18 years of age are in juvenile facilities.[9] Nationally, Native Americans make up less than 1% of all youth, but 3% of Indian females are in juvenile facilities.[7]~~

~~Over the last decade, the racial disparity in youth placed in the juvenile penal system has increased by nearly 22%.[9] As a result of disparities in the number of justice-involved juveniles, minority youth detainees are more likely to suffer severe psychological/mental health issues and live in restrictive facilities away from home. Black juveniles, specifically, are experiencing worse health outcomes, especially mental health outcomes, due to disparities in the juvenile penal system.[9]~~

Social and Societal Impact

~~Family support and love are essential for the development of juveniles social identity.[9] However, visits, phone calls, and sometimes even letters are prohibited during solitary confinement, creating additional separation between inmates, their families, and the outside world in general.~~

Isolation due to incarceration creates separation from society that makes it very difficult to form a social identity. Solitary confinement exacerbates the social complexities and behaviors of re-entering into society by aggravating preexisting depression or anxiety due to separation from home or the community. Consequently, isolation hinders the development of juveniles, making it extremely difficult for them to reintegrate into the community easily or productively.[3]

Additionally, author, Jessica Lee, highlights that solitary confinement also negatively impacts the physical growth of juveniles by restricting much needed exercise and nutrition.[3]

Reformation Efforts

The impact of juvenile solitary confinement has led to a call for reform by legislators and scientific scholars.[3] Although some states have been successful in abolishing or reducing solitary confinement, it is still practiced within the juvenile penal system.[4] This call for reform regarding solitary confinement has the potential to shift the juvenile justice system toward a more ethical and just model.

- **Federal Reformation Efforts**

U.S. Representative Cedric Richmond presented a bill calling for a study across the nation on the impacts that solitary confinement has on mental health. The intent of this bill, known as the Solitary Confinement Study and Reform Act of 2014, was to reduce the use of solitary confinement.[3] The bill died and was reintroduced to the House in 2015.

In 2015, Senator Cory Booker introduced “Maintaining Dignity and Eliminating Unnecessary Restrictive Confinement of Youth”, commonly known as the Mercy Act. The Mercy Act entails the following:

1. Prohibits the use of solitary confinement of juveniles in federal custody, except for a maximum of three hours, if the juvenile harms any individual.
2. Requires that facilities first use less restrictive measures to control behavior before placing the juvenile into solitary.
3. If, after the maximum three hours of solitary have ended, the juvenile still poses a risk of physical harm to themselves or anyone else, then the juvenile can be

transferred to a different juvenile facility or "internal location" where he or she can be treated without the use of solitary.

The Mercy Act was introduced to the Senate in 2017, but no further action has been taken.[3]

- **State & Local Reformation Efforts**

In the state of New York, legislators agreed to ban solitary confinement for inmates younger than 21 at Riker's Island and implement a practice where inmates between the ages of 18-21 undergo counseling and classes in a different facility as an alternative.[3] The reason for this reform was to combat the psychological effects that solitary confinement has on young adults and youth. Other states have joined in on State and Local reformation with varying approaches to the public health issue. For instance, in Pennsylvania mentally ill inmates will no longer be placed in solitary confinement; instead, they will be placed in special treatment units.

Although these laws are progressive, they do not address all of the concerns about solitary confinement among youth. There has been a huge push by activists and researchers for Congress and the U.S. Department of Justice to bring forth uniformity across the nation's legislation to provide a standard and just approach to juvenile inmates regarding solitary confinement in the U.S. prison system.[10]

- **Educational Efforts**

Many medical and research organizations, such as the National Alliance for Suicide Prevention, have developed recommendations and interventions for "improving the level and quality of collaboration between the juvenile and mental health systems, primarily for suicide prevention."[11] These collaborative efforts are tailored to promoting education, awareness, and prevention support and services for youth in the juvenile prison system. In these educational programs, organizations and researchers identify protective factors to decrease mental illness and suicide. In so doing, many organizations also are promoting data collection and inmate screening/assessment tools to increase information on solitary confinement in an effort to better understand and combat the psychological and social impacts of solitary confinement. More information and knowledge will allow health care professionals and public health practitioners to monitor the social development and health outcomes for inmates in juvenile facilities.[13]

Opposition To Reformation Efforts

Despite evidence of deleterious effects of solitary confinement in the juvenile penal system, there is still some opposition to reformation efforts. Opponents suggest that solitary confinement serves pragmatic purposes. For example, when prisons are overloaded with inmates, there is no physical space for them, or enough staff to run the prison. In this instance, solitary confinement provides additional housing space for inmates.[12] Others contend that solitary confinement aids in the rehabilitation of character as it becomes a means of reflection for inmates. Another viewpoint is that solitary confinement offers prison safety for inmates who are a threat to staff, other inmates, or the public.[13] Finally, some believe that solitary confinement provides guards/officers with the means to discipline and maintain order within the prison walls.[13]

Conclusion

Nearly half of juveniles placed in the U.S. Prison system experience solitary confinement. As a result, the majority of these juveniles also have detrimental, long-lasting, physical and psychological health outcomes. Education, counseling, and rehab programs are all positive alternatives to solitary confinement that raises health outcomes for youth. Increased State and Federal legislation that actively opposes juvenile solitary confinement will not only positively impact youth outcomes but society as well when inmates reintegrate into their communities. Opposing solitary confinement and restrictive housing would be a significant step forward in saving lives and improving health and well-being outcomes.

American Osteopathic Association Policy

Given the research surrounding the negative impacts of restrictive housing and solitary confinement, the American Osteopathic Association adopts the following policy statements as its official position on opposing restrictive housing and solitary confinement for juvenile inmates of the prison system in the U.S.:

1. The official position of the American Osteopathic Association (AOA) is that youth incarceration is meant to be rehabilitation and that the use of juvenile solitary confinement and/or restrictive housing imparts serious psychological and physical harm.
2. The American Osteopathic Association encourages increased research and data collection surrounding the prevalence of the use of solitary confinement /restrictive housing among juveniles.
3. The American Osteopathic Association opposes the use of solitary confinement and/or restrictive housing among juveniles in the penal system and supports the abolishment of the use of solitary confinement and isolation for incarcerated youth set forth at the United Nations Convention on the Rights of the Child.

Policy Brief on Patient Matching

Overview:
As patient electronic health information can be more easily shared between physicians, health information exchanges, and payers, patient identification (patient matching) remains a persistent problem in ensuring that electronic health record (EHR) data is complete and accurate. **ACCORDING TO A 2019 NATIONAL SURVEY, 20% OF PROVIDERS AND HEALTH INFORMATION EXCHANGES REPORTED THAT MORE THAN 10% OF THEIR STORED RECORDS ARE DUPLICATES, WITH SOME RESPONDENTS REPORTING MORE THAN 50% DUPLICATION IN THEIR RECORDS[1]**. ~~Errors and missing information remain common in the electronic health record ecosystem, with approximately 8% of all records being split or duplicate. This error rate is higher (14% to 16%) within large health systems that store vast amounts of data for a large number of patients.1 When excluding matching within organizations to analyze patient matching rates between organizations, the match rate can drop to 50%.2~~ These high duplication and mismatch rates often translate into unnecessary resource use and poor outcomes when patient records are not up-to-date or contain inaccurate information**. THE SAME STUDY FOUND THAT ABOUT 38% OF HEALTHCARE PROVIDERS EXPERIENCED AN ADVERSE EVENT IN THE LAST TWO YEARS BECAUSE OF PATIENT MATCHING ISSUES. ADDITIONALLY, 45% OF LARGE HOSPITALS REPORTED DIFFICULTY MATCHING OR IDENTIFYING THE CORRECT PATIENTS BETWEEN SYSTEMS[2]**~~. A 2016 report indicated that 4% of duplicate records result in negative clinical care and outcomes.~~

Robust and accurate information exchange is central to delivering high quality, cost effective care. Although it requires significant investment, improving patient matching rates will provide benefits to the greater healthcare system that extend far beyond individual encounters.

THE OFFICE OF THE NATIONAL COORDINATOR (ONC) PUBLISHED THE TRUSTED EXCHANGE FRAMEWORK, A COMMON SET OF PRINCIPLES DESIGNED TO INCREASE TRUST ACROSS HEALTH INFORMATION NETWORKS, IN 2022 TO SUPPORT IMPROVED DATA SHARING ACROSS HEALTHCARE ENTITIES. THESE PRINCIPLES, COMBINED WITH THE COMMON AGREEMENT, A LEGAL CONTRACT FOR DEFINING TECHNICAL REQUIREMENTS FOR PARTICIPATION, (KNOWN TOGETHER AS TEFCA), WERE DEVELOPED WITH THE GOAL OF SIMPLIFYING CONNECTIVITY TO SECURELY EXCHANGE INFORMATION TO IMPROVE PATIENT CARE. THESE NATIONWIDE EXCHANGE EFFORTS MAKE THE NEED FOR EFFECTIVE RECORD MATCHING ESPECIALLY IMPORTANT.

Being able to effectively capture, track, and share data relating to patients' social determinants of health is crucial to delivering high-value care management and promoting well-being outside of a hospital. Not only would accurate capture and sharing of patient data promote better care coordination once a patient is back in their community, but it also supports better population level analytics.[3] Despite the need to improve patient matching, no clear standards for patient matching exist, and there are numerous legal and operational barriers to driving standardization across the healthcare landscape.

Past and Current Proposals

Policy efforts to improve the matching of patient records in an increasingly digital health care system date back to the mid-1990s. As part of the Health Information Portability and Accountability Act (HIPAA) in 1996, Congress directed the Department of Health and Human Services (HHS) to develop a unique identifier for each individual, employer, provider, and plan within the US healthcare system. However, following the passage of HIPAA, there was significant pushback against this provision due to privacy and security concerns. As a result, Congress walked back the proposal by inserting language into appropriations bills that prohibited HHS from using federal funds to develop unique patient identifiers (UPIs) for individuals.

As the number of digital patient records across the US health care system proliferates, it is becoming increasingly important that providers can de-duplicate records and effectively match them to the proper patient. **IN RESPONSE TO PUBLIC COMMENTS DESCRIBING "PATIENT ADDRESS" AS A USEFUL DATA ELEMENT FOR ACCURATE PATIENT MATCHING IN LIEU OF A UPI, ONC COLLABORATED WITH STANDARDS DEVELOPMENT ORGANIZATIONS TO CREATE PROJECT US@, AN INITIATIVE INTENDED TO ESTABLISH CONSISTENT PATIENT ADDRESS FORMATTING TO SUPPORT PATIENT MATCHING BY ISSUING A UNIFIED TECHNICAL SPECIFICATION FOR HEALTH RECORDS. RESEARCHERS ESTIMATE THAT FORMATTING ADDRESSES ACCORDING TO THE U.S. POSTAL SERVICE SPECIFICATIONS WILL AID IN MORE ACCURATELY LINKING RECORDS[4]. "PATIENT ADDRESS" AND "PATIENT FORMER ADDRESS" ARE INCLUDED AS DATA ELEMENTS IN THE UNITED STATES CORE DATA FOR INTEROPERABILITY (USCDI) AS A STANDARD, FINALIZED IN 2020. WHILE THIS EFFORT IS IMPORTANT TO SUPPORT PATIENT MATCHING, ADDITIONAL DEMOGRAPHIC DATA IS NECESSARY TO EFFECTIVELY MATCH PATIENT RECORDS. CERTAIN INDIVIDUALS, INCLUDING UNHOUSED INDIVIDUALS, WOULD BE NEGATIVELY IMPACTED BY EFFORTS THAT RELY EXCLUSIVELY ON ADDRESSES.**

~~As of March of 2019, as part of the HHS Centers for Medicare & Medicaid Services (CMS) and the Office of the National Coordinator's (ONC) Proposed Rule on Interoperability and Information Blocking, HHS is proposing to improve patient matching by establishing standards for EHR developers regarding demographic data elements necessary within EHRs for patient matching. The rule also includes a request for information on what data elements would be useful in ensuring accurate patient matching and whether national standards for patient identification would be useful.~~

Without a UPI, the ~~most effective way to ensure accuracy of matched patient records is through the~~ use of social security numbers **COULD ALSO HELP MATCH RECORDS, ALONG WITH OTHER DATA ELEMENTS**. A study published in Perspectives in Health Information Management asserts that creating a field for at least the last 4 digits of a patient's social security number, and capturing a patient's full middle name, would increase match accuracy substantially.[5]~~[4]~~

Challenges of Each Approach

While there is a great amount of discussion around national standards for patient demographic data and the need for additional identifying information, there is disagreement on whether it would be more appropriate to encourage the use of social security numbers or to seek legislative action to create unique patient identifiers.

Inclusion of social security numbers in patient records would improve patient matching, and standards that require fields for social security numbers in EHRs would not require legislative action. However, various challenges exist to achieving widespread adoption of this practice. First, individuals are often reluctant to provide SSNs out of concern for identity theft. Under this approach, patients would likely have various records with different providers containing their SSNs, increasing their exposure to identity theft risk. Although this perceived risk may be marginal, the fear is likely to be a deterrent to patients offering this information. Second, many states outlaw the collection of social security numbers for health care purposes, and a federal standard that included SSN collection would not apply in these states. Third, as a result of federal legislation, Medicare now provides patients with Medicare cards **TO** ~~and is actively~~ shift~~ing~~ away from having patients provide social security numbers. Alternatively, the use of Medicare cards can improve patient matching for this particular population.[6]~~[5]~~

As an alternative to social security numbers, various groups have proposed using different unique patient identifiers, including numbers that would be issued by CMS, encouraging the use of biometrics as an additional authenticator, or incorporating additional personal authenticators within patient records that patients would then confirm (personal questions or text message authentication). However, these changes would be costly to implement and there is no consensus on what approach would be best.

Position of the AOA

In light of the current debate regarding the most effective way to match patient data that does not present privacy and security risks, the AOA supports efforts to develop national standards with appropriate safe guards for authentication, and collection of patient demographic data. In order to make the sharing of patient data more efficient and

accurate, all health care organizations must collect the same information and enter it in a standardized format. The AOA will support policies that will achieve standardization of identifying data in patient records.

Additionally, because patient health data is particularly sensitive information and patient records contain large amounts of identifying information, the AOA will support the strengthening of privacy and security standards for the certification of EHRs and application programming interfaces.

SUBJECT: MAINTENANCE OF LICENSURE -SOURCE: H627-A/19

SUBMITTED BY: Council on State Health Affairs and the Bureau of Osteopathic Education

REFERRED TO: Ad Hoc Committee

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs and the Bureau of Osteopathic Education have reviewed the policy; and

WHEREAS, the Council on State Health Affairs and the Bureau of Osteopathic Education believe that the policy remains relevant; now, therefore be it

RESOLVED, that the Council on State Health Affairs and the Bureau of Osteopathic Education recommend that the following policy be REAFFIRMED.

Maintenance of Licensure

Policy Statement

The American Osteopathic Association (AOA):

(1) supports the development of state level maintenance of licensure (MOL) programs to demonstrate that all physicians are competent to provide quality care that incorporates relevant technological and scientific advancements over the course of their career. Flexible pathways for achieving MOL should be maintained. The requirements for MOL should balance transparency with privacy protection and not be overly burdensome or costly to physicians or state licensing boards.

(2) Continues to address and promote physician competency through the teaching of core competencies at the predoctoral and postdoctoral levels as well as ongoing physician assessment through Osteopathic Continuous Certification (OCC)

(3) Continues to work with State Osteopathic Affiliates, the American Association of Osteopathic Examiners and other stakeholders to establish and implement MOL policies that promote patient safety and the delivery of high quality of care.

(4) Through its bureaus, councils and committees, will continue to ensure that OCC is recognized by the federal government, state governments and other regulatory agencies and credentialing bodies as equivalent to other national certifying bodies' "maintenance" or "continuous" certification programs.

34 (5) While supporting the use of board certification as a recognition of quality and
35 excellence, signifying the highest physician achievement in a particular specialty;
36 opposes any efforts to require OCC as a condition of medical licensure;
37
38 (6) Collaborates with entities properly qualified for and tasked with decision-making
39 regarding insurance payment, hospital privileges, network participation, malpractice
40 insurance coverage, physician employment, to determine the role of physician
41 board certification and OCC or other "maintenance of certification" programs in such
42 decisions.
43
44 (7) Continues to innovate and improve the OCC process.

SUBJECT: PHYSICIAN PAYMENT ADJUSTMENTS FOR BUDGET NEUTRALITY

SUBMITTED BY: Florida Osteopathic Medical Association

REFERRED TO: Ad Hoc Committee

~~The American Osteopathic Association House of Delegates declares the following~~:

WHEREAS, in 1989 the United States Congress passed legislation, which was subsequently enacted, mandating that any estimated increases of $20 million or more to the Medicare physician payment schedule—created by upward payment adjustments or the addition of new procedures or services—must be offset by cuts elsewhere[1]; and

WHEREAS, since the mandate of budget neutrality has been used to impact physician payments by suppressing the conversion factor used to monetize relative value units associated with procedures, such that the conversion factor has changed from $38.2581 in the year 2001 to a factor of $33.8872 in 2023[2]; and

WHEREAS, because of inflation and changing costs, $38.25 in January 2001has the spending power of $67.79 in January 2023[3], representing substantial physician ~~reimbursement~~ **PAYMENT** reductions in the face of a nearly 50% loss in the valuation of those payments; and

WHEREAS, during the same time Medicare spending increased from $224.3 billion dollars in 2001[4], to $829 billion in 2021[5] representing an over 369% increase; now let it be

RESOLVED, that the American Osteopathic Association (AOA) will work with relevant stakeholders to reform budget neutrality such that all recipients of Medicare ~~reimbursement~~ **PAYMENT** be treated equally with respect to cost containment strategies; and

RESOLVED, that the AOA will work with relevant stakeholders to remediate the conversion factor to enhance physician ~~reimbursement~~ **PAYMENT** to a level that is more reflective of the changes to overall Medicare spending since the 1989 budget neutrality provision became active; and be it further

RESOLVED, that the AOA will work with relevant stakeholders to ensure that the conversion factor be modified on an annual basis at a level no less than any increase to the ~~consumer price index~~. **MEDICARE ECONOMIC INDEX**.

SUBJECT: HOUSE OF DELEGATES COMMITTEES

SUBMITTED BY: Florida Osteopathic Medical Association

REFERRED TO: Ad Hoc Committee

The American Osteopathic Association House of Delegates declares the following:

WHEREAS, the American Osteopathic Association (AOA) houses a policy compendium comprised of resolutions adopted by the House of Delegates; and

WHEREAS, while policies are reviewed every five years, in a typical year more new resolutions are adopted than sunset resolutions are allowed to expire; and

WHEREAS, the accumulation of more policies creates a larger burden on individual reference committees during the house of delegates, at times requiring service for many hours to service dozens of resolutions; and

WHEREAS, there are a growing number of AOA policies which all need to be periodically addressed as well as new resolutions. To ensure that there is ample time to review and word the amendments for more effective review in the house, one or more committees could be used to “spread the wealth”.

WHEREAS, it is in the best interests of the reference committees to have sufficient time to fully review, edit and present all the resolutions to the house; now, therefore be it

RESOLVED, that Speaker of the House shall limit the number of resolutions under consideration by any single reference committee, and will enumerate such limits annually in the Rules of the House; and, be it further

RESOLVED, that to enable this to occur, the Speaker of the House may establish additional reference committees, including but not limited to a Committee on Membership Affairs, a Committee on Ethical Affairs, and / or a Committee on Long Range Planning and Development, on an annual basis, as needed.

Background Information: Provided by AOA Staff
Current AOA Policy: None

Prior HOD action on similar or same topic: None

The Speaker of the House annually reviews the resolutions assigned to the various reference committees by the administration to identify how many members to assign to each reference committee.

FISCAL IMPACT: In-direct expense of staff resources.

Current AOA Policy:

The resolved statement is covered by content in the following policies:

- H325-A/22 Interference – Lawful Off-Label Treatment of Patients: AOA supports the protection of a physician's ability to prescribe treatments and to speak freely about lawful, evidence-based, health care options, including off-label treatments or health care-related research, without fear of being sanctioned by regulatory boards, insurance companies or employers.

- H328-A/23 Healthcare Practice – Patient-Physician Relationship and: States that The AOA believes that it is the responsibility of the osteopathic physician to advocate for the rights of their patients, regardless of any contractual relationship and that the patient-physician relationship shall not be altered by any system of healthcare practice which may place economic considerations above the interest of patients.

- H617-A/23 Criminal Liability for Clinical Decisions
  "The American Osteopathic Association (AOA) opposes criminal liability for a physician whose clinical decisions were made without malice and in good faith."

- H308-A/21 Intractable and/or Chronic Pain (Not Associated with End of Life Care)
  "No physician shall be subject to criminal prosecution (by state or federal agencies) for appropriately prescribing or administering medically necessary controlled substances in the course of treatment of a person for intractable pain and/or chronic pain.

Some AOA efforts opposing interference and inappropriate sanctions at the federal level include opposing automatic formulary substitutions for certain pharmaceutical products, including generics, biosimilars, and other therapeutic alternatives. The AOA also commented in 2020 on changes to Medicaid drug utilization review program rules, expressing concern around the impact that changes related to opioid safety edits and retrospective claims review may have on unfairly targeting certain specialties.

Prior HOD action on similar or same topic: as noted above

FISCAL IMPACT: Unknown. In addition to the ongoing advocacy work of the AOA, this resolution asks that the AOA "publicly protects and assists its members when non-medical bodies inappropriately interfere with medical decision-making by osteopathic physicians." To become involved in individual matters, the AOA would need to thoroughly investigate and vet such matters, which would have significant financial cost associated with it.

ACTION TAKEN: _Referred to the Maine Osteopathic Association (MOA)_

DATE: ____July 20, 2024_____

SUBJECT: APPROVED RESOLUTIONS STATUS

SUBMITTED BY: Osteopathic Physicians & Surgeons of California

REFERRED TO: Ad Hoc Committee

WHEREAS, each year the delegates of the American Osteopathic Association (AOA) House of Delegates (HOD) adopt resolutions; and

WHEREAS, the AOA assigns adopted resolutions to the appropriate AOA staff and leadership; and

WHEREAS, the AOA provides a tracking system for adopted resolutions; and

WHEREAS, the AOA provides on the AOA Past Resolutions webpage the "Disposition of Resolution"; and

WHEREAS, state and specialty associations and AOA members continue to look to the AOA Past Resolutions webpage to ensure resolutions being submitted for consideration are not already adopted; and

WHEREAS, the only related resolution found is H366-A/18 - Resolution Retention which endorses that the AOA will maintain on file a copy of the complete resolution as approved by the AOA House of Delegates; and

WHEREAS, this current resolution is in addition to and furtherance of the prior adopted resolution H366-A/18 - Resolution Retention and provides a pathway to achieve the intended spirit of the prior resolution adding on the status (what has been done), to determine whether resolutions require sunsetting, amendment, or addition; and

~~WHEREAS, a suggested Implementation would be on the existing AOA Past Resolutions webpage, add two more columns titled "Interval Update" and "Annual Update" with bullet list of undertaken actions with option for narrative explanation when appropriate; and~~

WHEREAS, to make it simpler for future resolution writers to identify the progress of adopted resolutions; therefore, be it further

RESOLVED, that the AOA provides twice yearly status updates to the AOA Past Resolutions webpage on the implementation and actions pertaining thereto on adopted resolutions within ~~14~~ **30** days following the conclusion of the AOA Board of Trustees Midyear Meeting and within ~~14~~ **30** days following the conclusion of OMED.

31 **RESOLVED, A SUGGESTED IMPLEMENTATION WOULD BE ON THE**
32 **EXISTING AOA PAST RESOLUTIONS WEBPAGE, ADD TWO MORE**
33 **COLUMNS TITLED "INTERVAL UPDATE" AND "ANNUAL UPDATE"**
34 **WITH BULLET LIST OF UNDERTAKEN ACTIONS WITH OPTION FOR**
35 **NARRATIVE EXPLANATION WHEN APPROPRIATE**.

Background Information: Provided by AOA Staff
Current AOA Policy: None
Prior HOD action on similar or same topic:
Action item: H366-A/18 - Resolution Retention

Providing updates to the AOA Past Resolutions webpage within 14 days of the Board of Trustees Midyear meeting and OMED is a limited amount of time for staff to process the updates. Allowing for 30 days after each meeting provides staff adequate time to update the 'Disposition of Resolution' column for the resolutions.

FISCAL IMPACT: $0
Provided by OPSC: Unlikely fiscal impact as updates are within the scope of work for the AOA staff and leadership who are identified in the "Disposition of Resolution" column. This resolution clarifies a standardized pathway for updates.

Provided by Staff: While no hard dollar fiscal impact, the fiscal value of staff time would be increased by having staff provide updates an additional two times annually.

ACTION TAKEN: _Adopted as Amended__

DATE: ___July 20, 2024_____

SUBJECT: OSTEOPATHIC MANIPULATIVE TREATMENT (OMT) COVERAGE DETERMINATION GUIDANCE - AMENDMENT TO POLICY H635-A/20

SUBMITTED BY: Bureau on Federal Health Programs

REFERRED TO: Ad Hoc Committee

WHEREAS, the AOA seeks to reiterate its firm position that payers should pay for both OMT and E/M services billed on the same date when medically necessary, and that payers should not broadly deny payment for services due to claims being appended with a modifier 25; and

WHEREAS, guidance in current AOA policy H635-A/20 American Osteopathic Association (AOA) Osteopathic Manipulative Treatment (OMT) Coverage Determination Guidance drafted in 2020 is now outdated in light of E/M guideline changes which took effect in 2021; and

WHEREAS, AOA is seeing more frequent action by payers to broadly deny claims appended with a modifier 25, and the AOA wants to express its strong opposition to these blanket denials, and have an up-to-date resource to use with payers on appropriate billing of OMT; and

WHEREAS, AOA wants to provide clear guidance to members on documentation best practices and establish a bright line for payers where it is inappropriate to deny claims for OMT and E/M services billed on the same date; now, therefore be it

RESOLVED, that the Bureau on Federal Health Programs recommends that the below policy be **adopted to completely replace** the guidance currently in place under H635-A/20**.**

The American Osteopathic Association (AOA) supports the ability for physicians to bill for Osteopathic Manipulative Treatment (OMT) when performed as a separately identifiable procedure on the same date as an evaluation and management (E/M) service when the services are medically necessary and are supported with appropriate documentation according to the E/M Documentation Guidelines. The AOA will work with all payers to ensure that policies continue to support appropriate payment for OMT when billed with an E/M service. Additionally, the AOA will engage with private payers to ensure that their coverage policies are consistent with current medical practice, to address inappropriate claims denials, and to address blanket denials for services billed with a modifier 25.

The AOA approves the position paper below for OMT coverage and encourages all public and private payers to refer to AOA's policy when developing new policy or revising existing guidance for OMT coverage. The position paper is intended for use in educational efforts on proper documentation, billing, and payment for OMT; discusses best practices; and

acknowledges that documentation by physicians may vary based on individual needs and circumstances that should not serve as a basis for payment denials when services are medically necessary.

American Osteopathic Association (AOA) Position Paper on Osteopathic Manipulative Treatment

Osteopathic manipulative treatment (OMT) is an essential treatment tool used by physicians for a broad range of conditions, and particularly for treating somatic dysfunction. OMT should be appropriately paid for when it is medically necessary, and documentation of the service is accurate. This document provides guidance to physicians and payers on the following:

- The physicians qualified to provide OMT;
- When payment for OMT services is appropriate;
- Proper documentation and coding of OMT services, including when the service is billed on the same date as an evaluation and management (E/M) service; and
- Appropriate reporting of E/M services in conjunction with OMT.

Physicians are encouraged to use these guidelines to inform best practices for billing, coding, and documentation. Payers should also consider these guidelines in development of coverage policy and should not inappropriately limit payment for medically necessary OMT services.

Introduction to OMT

OMT is a distinct medical procedure used by physicians (DOs/MDs) to treat somatic dysfunction and other conditions. The American Association of Colleges of Osteopathic Medicine (AACOM) Glossary of Osteopathic Terminology defines OMT as the therapeutic application of manually guided forces by a physician to improve physiologic function and/or support homeostasis that has been altered by somatic dysfunction. The AACOM glossary further elaborates on the definition, stating:

> Impaired or altered function of related components of the somatic (body framework) system: skeletal, arthrodial and myofascial structures, and their related vascular, lymphatic, and neural elements. Somatic dysfunction is treatable using osteopathic manipulative treatment. The positional and motion aspects of somatic dysfunction are best described using at least one of three parameters: (1) the position of a body part as determined by palpation and referenced to its adjacent defined structure, (2) the directions in which motion is freer, and (3) the directions in which motion is restricted.[1]

Somatic dysfunction in one region may lead to compensatory somatic dysfunction in other regions.

---

[1] **The American Association of Colleges of Osteopathic Medicine (AACOM) EDUCATIONAL COUNCIL ON OSTEOPATHIC PRINCIPLES (ECOP) Glossary of Osteopathic Terminology, 3RD EDITION, 2017** ~~November 2011~~.

Osteopathic manipulative treatment can also be used to treat the somatic component of visceral disease and any organ system, which has the potential to manifest as changes in the skeletal, arthrodial, and myofascial tissues (e.g. tight right shoulder muscles in a patient with gallbladder disease). Normalizing musculoskeletal activity (relaxing tense muscles, etc.) can normalize outflows through sympathetic or parasympathetic autonomic nervous systems to visceral systems, resulting in more normal visceral and organ system function. Somatic dysfunction is identified on the physical exam by one or more of the following elements: **T**issue texture changes, positional **A**symmetry, **R**ange of motion alterations, or changes in palpatory sensitivity, e.g., **T**enderness (TART).

Provider Types Qualified to Perform OMT

To perform OMT, a qualified Doctor of Osteopathic Medicine must have graduated from an accredited school of osteopathic medicine, or a medical doctor must have trained in a postgraduate osteopathic training program that encompasses osteopathic principles and practices, including hands-on demonstration and competency testing in OMT.

OMT Payment:

The decision to utilize OMT as part of the overall health care of patients is made on a visit-by-visit basis. As such, it is typical to perform a history and physical examination on initial and subsequent encounters. Based on the history and findings of the physical examination, the physician may decide to use OMT as part of the overall care of the patient.

OMT is a paid service when somatic dysfunction is documented in the history and/or the physical examination. OMT is not paid when somatic dysfunction is absent from the patient's history or physical examination documentation. The method of OMT employed by the physician is determined by the patient's condition, age, and the effectiveness of previous methods of treatment. Because OMT is a procedure that is separate from the evaluation and management (E/M) service, both services should be payable when rendered on the same day assuming that somatic dysfunction is identified, documentation is appropriate, and that the E/M service is above and beyond the services covered in the OMT and is documented accordingly. Payers should not deny claims on the sole basis that the E/M service is billed with modifier 25 when a procedure was performed on the same date.

OMT Documentation

The medical record documentation must support the level of E/M service billed and include the somatic dysfunction that the physician observed in the body regions treated with OMT. If an E/M service is being reported on the same day as OMT, the documentation should clearly distinguish the elements that constitute the E/M service and the OMT service. Following current E/M coding guidelines, the level of E/M service selected may be based on the total time spent on the E/M portion of the encounter or medical decision making (MDM). Documentation should be consistent with Current Procedural Terminology (CPT©)

guidelines to support level selection. The documentation should clearly identify the body regions affected and treated with OMT to support the procedure code(s) reported.

~~The selection of body region(s) to which OMT is applied should reflect the region(s) of documented somatic dysfunction. There may be instances when multiple regions are treated due to the occurrence of compensatory changes. When this occurs, the documentation should describe the compensatory changes and the rationale for treating these areas, especially if the patient has no complaints related to these areas. Treatment should be directed to the areas of documented somatic dysfunction and should not be aimed at areas unrelated to the diagnosis~~. **THE BODY REGION(S) TO WHICH OMT IS APPLIED MUST BE REFLECTED WITHIN DOCUMENTATION OF SOMATIC DYSFUNCTION. THERE MAY BE INSTANCES WHEN MULTIPLE REGIONS ARE TREATED WHEN THE PATIENT HAS NO COMPLAINTS RELATED TO THESE AREAS. IF THERE IS INTERRELATIONSHIP SUCH AS A DISTANT MECHANICAL INFLUENCE OR THE OCCURRENCE OF COMPENSATORY CHANGES, IT IS BEST TO DESCRIBE THOSE WHEN POSSIBLE. TREATMENT SHOULD GENERALLY NOT BE DIRECTED TO AREAS OF DYSFUNCTION UNRELATED TO THE DIAGNOSIS, THAT HAVE NO INFLUENCING NATURE.** The type, frequency, and duration of OMT should be consistent with current standards of medical practice.

Factors that may affect frequency and duration of treatment are severity of illness, duration or chronicity of the patient's condition, and the presence of co-morbidities. These factors should be reflected in the medical record if they contribute to the physician's treatment approach.

Overall, the American Osteopathic Association recommends that the E/M and OMT portions of the visit be distinctly documented and detail the regions treated, the techniques utilized, ~~and when appropriate, a description of how the patient tolerated the treatment~~. **A DESCRIPTION OF HOW THE PATIENT TOLERATED THE TREATMENT, AND OTHER DETAILS CONSISTENT WITH TYPICAL PROCEDURE DOCUMENTATION**

OMT Coding

In April 2010, the American Medical Association (AMA) Relative Value Update Committee (RUC) requested that the AOA survey the existing OMT codes to develop accurate and unbiased information for the relative value of the physician work involved in performing OMT as part of the Centers for Medicaid and Medicare Services (CMS) five-year review of the resource based relative value scale (RBRVS).

The survey process required the creation of vignettes to describe the typical patient for OMT CPT® Codes 98925-98929. Additionally, the description of the preservice, intraservice, and postservice work for OMT was included. As of January 2012, the vignettes for the typical patient and the preservice, intraservice and postservice descriptors are contained within the RUC database.

There are five OMT Service CPT© Codes (98925-98929), each corresponding to the number of body regions treated with OMT. Descriptors for each code are the following:

- 98925 *Osteopathic manipulative treatment (OMT); 1-2 body regions involved*

- 98926 *Osteopathic manipulative treatment (OMT); 3-4 body regions involved*
- 98927 *Osteopathic manipulative treatment (OMT); 5-6 body regions involved*
- 98928 *Osteopathic manipulative treatment (OMT); 7-8 body regions involved*
- 98929 *Osteopathic manipulative treatment (OMT); 9-10 body regions involved*

Vignettes and work descriptors for each OMT code can be found in Appendix C of this document. Note: The OMT service codes do not include any elements of the history, examination, and medical decision making.

Reporting E/M Services:

It is appropriate for an E/M service to be performed on initial visits where OMT may be performed, and on subsequent patient encounters if a new problem occurs or if original symptoms have changed. An appropriate significant, separately identifiable E/M service, documented according to the E/M guidelines, may be provided and reported so long as it is considered medically necessary and goes above and beyond the work associated with the OMT procedure itself. As patients may not present for the explicit purpose of undergoing an OMT procedure, the E/M service helps a physician determine if OMT needs to be provided and, if so, what body region(s) to treat and what technique(s) to employ.

A physician should select the appropriate E/M based on MDM or total time of the E/M portion of the encounter, and they should make sure to document a medically appropriate history and/or examination. According to CPT guidelines, four types of MDM are recognized, which include straightforward, low, moderate, and high. MDM “includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option” and is defined by three key elements:

- Number and complexity of the problem(s) addressed during the encounter;
- The amount and/or complexity of data to be reviewed or analyzed; and
- The risk of complications and/or morbidity or mortality of patient management.

Total time may be used alone to select the appropriate code level for E/M services. Time consists of the cumulative amount of face-to-face and non-face-to-face time **personally** spent by the physician in care of the patient on the date of the encounter. Total time can include the following activities when performed:

- preparing to see the patient (e.g., review of tests)
- obtaining and/or reviewing separately obtained history
- performing a medically appropriate examination and/or evaluation
- counseling and educating the patient/family/caregiver
- ordering medications, tests, or procedures
- referring and communicating with other health care professionals (when not separately reported)
- documenting clinical information in the electronic or other health record
- independently interpreting results (not separately reported) and communicating results to the patient/ family/caregiver
- care coordination (not separately reported)

Physicians should follow the most recent CPT guidance on E/M services whenever billing these services. Documentation for both the E/M and OMT service must be complete when the services are billed on the same day.[2]
If utilizing an electronic health record (EHR), ensure that it is capable of capturing all of the history, physical examination and medical decision making and any other service(s) provided on each patient visit.
Per CPT © guidance, Evaluation and Management services may be reported separately using Modifier- 25 if the patient's condition requires a significant, separately identifiable E/M service above and beyond the usual preservice and postservice work associated with the OMT procedure. The E/M service may be caused or prompted by the same symptoms or condition for which the OMT service was provided. As such, different diagnoses are not required for reporting of the OMT and E/M service on the same date. Documentation of any changes to symptoms from original visit are vital to the medical necessity of the E/M service.

Documenting the Patient Visit: SOAP Note Example[3]:

Below is an example of a patient encounter and a subjective, objective, assessment, and plan (SOAP) note for each to illustrate how to document the patient's visit in the medical record. Other styles and preferences exist for medical record documentation. **Note: The E/M service should be a separately identifiable service above and beyond what is normally included in the osteopathic procedure note. If somatic dysfunction is identified in exam and OMT is recommended documentation should include a procedure note. The procedure note should be a separate note following the SOAP note**.

E/M visit level can be determined based on either medical decision making (MDM) or total time.

SOAP Note – Patient Example

S. A 20-year-old African American male complains of low back pain that began three days ago after he lifted a heavy object. Cannot straighten up when walking, pain with change of position. The patient denies radiation of pain and areas of numbness, the pain stays along the back and waist. He is comfortable when lying down, aspirin helps some, has used heat with some help. Has prior history of back pain as a child. Reviewed records provided. Symptoms resolved after undergoing physical therapy. Denies allergies, surgical history is unremarkable.

O. ~~Tenderness noted over lumbar and sacral regions. Inability to extend lumbar spine when standing. Flexion posture when standing. Muscle spasms noted in paraspinals of the lumbar region. Decreased range of motion of lumbar spine and sacrum was noted on active and passive motion testing. Neurologic exam normal~~. **FLEXION POSTURE WHEN STANDING. INABILITY TO EXTEND LUMBAR SPINE ON ACTIVE AND PASSIVE RANGE OF MOTION. TENDERNESS NOTED OVER LUMBAR**

[2] American Medical Association. CPT Evaluation and Management (E/M) Code and Guideline Changes. Effective January 1, 2023. Available here.
[3] American Osteopathic Association. "Guide to Coding and Documentation: Osteopathic Manipulative Treatment, First Edition." 2017

AND SACRAL REGIONS. MUSCLE SPASMS NOTED OF BILATERAL PARASPINAL MUSCULATURE OF THE LUMBAR SPINE. L2 FRRSR. L/R BACKWARD SACRAL TORSION. NEUROLOGIC EXAM WITHIN NORMAL LIMITS. MUSCULOSKELETAL STRENGTH OF BILATERAL LOWER EXTREMITIES EQUAL AND WITHIN NORMAL LIMITS.

A. The patient is diagnosed with lumbosacral sprain/strain, likely due to lifting a heavy object. Patient has moderate pain intensity with associated activity limitations.

Lumbosacral sprain/strain S33.8XXA

Note: Based on feedback from insurers and physicians who have completed appeals processes, the AOA encourages inclusion of a narrative of considerations and judgements synthesizing their clinical findings into a clear understanding of the presenting condition and treatment strategies.

P. 1. OMT recommended for the somatic dysfunction of lumbar and sacral regions as noted
2. Continue aspirin
3. No lifting, bending, or twisting
4. Contact office if symptoms worsen

OMT Procedure Note- Patient Example

Patient decided to proceed with OMT recommended. Verbal consent obtained. Discussed risks, benefits, and potential treatment reaction with patient and patient acknowledged comprehension. Patient put in position and technique used to treat the sacral and lumbar spine regions — hypertonic paraspinal muscles and sacral spine- piriformis muscles S2-S4.

Patient tolerated procedure well. Improved Range of Motion noted along with a decreased severity of pain.

Patient instructed to drink fluids today following procedure. Discouraged bedrest and encouraged movement. Contact office if pain increases.

CODING FOR THIS CASE

Evaluation and Management: new patient/established patient 99203/99213 (with modifier 25) **ATTACHING S33.8XXA**
OMT two body regions: lumbar/sacral 98925 **ATTACHING ICD-10 CODE M99.03 AND M99.04**

Conclusion:

OMT is a procedure that is separate from the evaluation and management service, both services should be payable when rendered on the same day considering that somatic dysfunction is observed and both services are appropriately documented. Physicians should follow the above guidance to ensure that their documentation is appropriate. However, physicians have varying approaches to documentation, and payment should not be denied as long as the E/M service is a significant, separately identifiable service above

and beyond the usual preservice and postservice work associated with the OMT procedure. Payers should also consider the above guidelines in developing coverage policies to ensure they are not inappropriately denying medically necessary services.

Appendices

Appendix A: OMT Coding Information

CPT/HCPCS Codes

98925 Osteopathic Manipulative Treatment (OMT); 1-2 Body Regions Involved
98926 Osteopathic Manipulative Treatment (OMT); 3-4 Body Regions Involved
98927 Osteopathic Manipulative Treatment (OMT); 5-6 Body Regions Involved
98928 Osteopathic Manipulative Treatment (OMT); 7-8 Body Regions Involved
98929 Osteopathic Manipulative Treatment (OMT); 9-10 Body Regions Involved

ICD-10 Diagnosis Codes

ICD-10 Codes:

M99.00	Segmental and somatic dysfunction of head region
M99.01	Segmental and somatic dysfunction of cervical region
M99.02	Segmental and somatic dysfunction of thoracic region
M99.03	Segmental and somatic dysfunction of lumbar region
M99.04	Segmental and somatic dysfunction of sacral region
M99.05	Segmental and somatic dysfunction of pelvic region
M99.06	Segmental and somatic dysfunction of lower extremity
M99.07	Segmental and somatic dysfunction of upper extremity
M99.08	Segmental and somatic dysfunction of rib cage
M99.09	Segmental and somatic dysfunction of abdomen and other regions

Appendix B: OMT Techniques are listed below (~~Please refer to~~ INCLUDING, BUT NOT LIMITED TO THOSE LISTED IN the AACOM Glossary of OMT Terminology ~~for more information)~~

Active method
Articulatory method
Articulatory treatment
Articulatory (ART)
Balanced ligamentous tension (BLT)
Chapman reflex
Combined method
Combined treatment
Compression of the fourth ventricle (CV-4)
Counterstrain (CS)
Cranial Treatment (CR)
CV-4
Dalrymple treatment
Direct method
Exaggeration method
Exaggeration technique
Facilitated oscillatory release technique (FOR)
Facilitated positional release (FPR) **FASCIAL DISTORTION MODEL (FDM)**
Fascial release treatment
Fascial unwinding
Functional method
Galbreath treatment
Hepatic pump
High velocity/low amplitude technique (HVLA)
Hoover technique
Indirect method (I/IND)
Inhibitory pressure technique
Integrated neuromusculoskeletal release
Jones technique
Ligamentous articular strain technique (LAS)
Liver pump
Lymphatic pump
Mandibular drainage technique
Mesenteric release technique
Muscle energy **(ME)**
Myofascial release (MFR) direct and indirect
Myofascial technique
Myotension
Osteopathic in the Cranial Field (OCF)
Passive method
Pedal pump
Percussion vibrator technique
Positional technique
Progressive inhibition of neuromuscular structure (PINS)
Range of motion technique
Soft tissue **(ST)** technique

392 Spencer technique
393 Splenic pump technique
394 Spontaneous release by positioning
395 Springing technique
396 Still technique
397 Strain-Counterstrain ® **(S/CS)**
398 Thoracic pump
399 Thrust technique (HVLA)
400 Toggle technique
401 Traction technique
402 V-spread
403 Ventral techniques
404
405
406 **Appendix C: OMT Vignettes and Coding for 98925-98929**
407
408 **OMT service code 98925:** Osteopathic manipulative treatment (OMT); one to two
409 body regions involved.
410
411 Vignette:
412 A 25-year-old female presents with right lower neck pain of two weeks duration.
413 Somatic dysfunction of cervical and thoracic regions is identified on examination.
414
415 Description of Preservice Work:
416 The physician determines which osteopathic techniques (e.g., HVLA, muscle
417 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
418 in what order the affected body regions need to be treated, and whether those body
419 regions should be treated with specific segmental or general technique approaches.
420 The physician explains the intended procedure to the patient, answers any
421 preliminary questions, and obtains verbal consent for the OMT. The patient is
422 placed in the appropriate position on the treatment table for the initial technique and
423 region(s) to be treated.
424
425 Description of Intraservice Work:
426 The patient is initially in the supine position on the treatment table. Motion
427 restrictions of C6 and C7 are isolated through palpation and treated using muscle
428 energy technique. Dysfunctions of T1 and T2 are treated using passive thrust
429 (HVLA) technique. Patient position is changed as necessary for treatment of the
430 individual somatic dysfunctions. Patient feedback and palpatory changes guide
431 further technique application as appropriate.
432
433 Description of Postservice Work:
434 Post-care instructions related to the procedure are given, including side effects,
435 treatment reactions, self-care, and follow-up. The procedure is documented in the
436 medical record.
437 **OMT Service code 98926:** Osteopathic manipulative treatment (OMT); 3-4 body
438 regions involved.

439
440 Vignette:
441 A 39-year-old female presents with right lower back pain of two weeks duration after
442 a lifting injury. Somatic dysfunction of lumbar, pelvis, and sacral regions are
443 identified on exam.
444
445 Description of Pre-Service Work:
446 The physician determines which osteopathic techniques (e.g., HVLA, Muscle
447 energy, Counterstrain, articulatory, etc.) would be most appropriate for this patient,
448 in what order the affected body regions need to be treated, and whether those body
449 regions should be treated with specific segmental or general technique approaches.
450 The physician explains the intended procedure to the patient, answers any
451 preliminary questions, and obtains verbal consent for the OMT. The patient is
452 placed in the appropriate position on the treatment table for the initial technique and
453 region(s) to be treated.
454
455 Description of Intra-Service Work:
456 The patient is initially in the prone position on the treatment table. Motion
457 restrictions of sacrum and pelvis are isolated through palpation and treated using
458 muscle energy and articulatory techniques. Dysfunctions of L1 and L5 are treated
459 using passive thrust (HVLA) technique. Patient position is changed as necessary
460 for treatment of the individual somatic dysfunctions. Patient feedback and palpatory
461 changes guide further technique application as appropriate.
462
463 Description of Post-Service Work:
464 Post-care instructions related to the procedure are given, including side effects,
465 treatment reactions, self-care, and follow-up. The procedure is documented in the
466 medical record.
467
468 **OMT service code 98927:** Osteopathic manipulative treatment (OMT); five to six
469 body regions involved.
470
471 Vignette:
472 A 17-year-old male presents with pain in the neck, upper and lower back, right
473 shoulder, and right chest following an injury in a high school football game two days
474 prior. Somatic dysfunctions of the right glenohumeral and acromioclavicular joints,
475 as well as the lower cervical, upper thoracic, right upper costal, and lumbar areas
476 are identified on exam.
477
478 Description of Preservice Work:
479 The physician determines which osteopathic techniques (e.g., HVLA, muscle
480 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
481 in what order the affected body regions need to be treated, and whether those body
482 regions should be treated with specific segmental or general technique approaches.
483 The physician explains the intended procedure to the patient, answers any
484 preliminary questions, and obtains verbal consent for the OMT. The patient is

485 placed in the appropriate position on the treatment table for the initial technique and
486 region(s) to be treated.
487
488 Description of Intraservice Work:
489 The patient is initially in a side-lying position on the treatment table. Motion
490 restrictions of identified joints are isolated through palpation and treated using a
491 variety of techniques as follows: acromioclavicular joint is treated with articulatory
492 technique; glenohumeral and costal dysfunctions are treated with muscle energy
493 technique; cervical spine is treated with counterstrain technique; and thoracic and
494 lumbar dysfunctions are treated with passive thrust (HVLA) technique. Patient
495 position is changed as necessary for treatment of the individual somatic
496 dysfunctions. Patient feedback and palpatory changes guide further technique
497 application as appropriate.
498
499 Description of Postservice Work:
500 Post-care instructions related to the procedure are given, including side effects,
501 treatment reactions, self-care, and follow-up. The procedure is documented in the
502 medical record.
503
504 **OMT service code 98928:** Osteopathic manipulative treatment (OMT); seven to
505 eight body regions involved.
506
507 Vignette:
508 A 64-year-old female, in rehabilitation following a left total knee replacement,
509 presents with swelling in the left lower leg, pain in her low back, hips and pelvis with
510 muscle spasms and numbness and bilateral wrist pain with use of a walker. She
511 has a history of widespread degenerative joint disease with stiffness and pain
512 making it difficult for her to actively participate in her rehabilitation program. Somatic
513 dysfunctions of the lumbar, thoracic, and cervical spine, sacrum, pelvis, right leg,
514 and bilateral wrist joints are identified on exam.
515
516 Description of Preservice Work:
517 The physician determines which osteopathic techniques (e.g., HVLA, muscle
518 energy, counterstrain, articulatory, etc.) would be most appropriate for this patient,
519 in what order the affected body regions need to be treated, and whether those body
520 regions should be treated with specific segmental or general technique approaches.
521 The physician explains the intended procedure to the patient, answers any
522 preliminary questions, and obtains verbal consent for the OMT. The patient is
523 placed in the appropriate position on the treatment table for the initial technique and
524 region(s) to be treated.
525
526 Description of Intraservice Work:
527 The patient is initially in the supine position on the treatment table. Motion
528 restrictions of identified joints are isolated through palpation and treated using a
529 variety of techniques as follows: radiocarpal joints are treated using articulatory and
530 myofascial release techniques; dysfunctions of L3, L5 and SI joints are treated
531 using balanced ligamentous tension technique; dysfunction of C5 through T3, the

pelvis and lower extremity are treated with muscle energy technique. Lower extremity edema is treated with lymphatic drainage techniques. Patient position is changed as necessary for treatment of the individual somatic dysfunctions. Patient feedback and palpatory changes guide further technique application as appropriate.

Description of Postservice Work:
Post-care instructions related to the procedure are given, including side effects, treatment reactions, self-care, and follow-up. The procedure is documented in the medical record.

OMT service code 98929: Osteopathic manipulative treatment (OMT); nine to ten body regions involved.

Vignette:
A 40-year-old male presents with sub-occipital headache, and pain in the neck, upper and lower back, left shoulder and chest, and right ankle. He was involved in a rear-end motor vehicle accident two weeks prior. X-rays in the emergency department (ED) were negative. He has been taking prescribed analgesic and muscle relaxant medications with minimal improvement. On examination, somatic dysfunction is identified at the occipitoatlantal, left glenohumeral and right tibiotalar joints, as well as the cervical, thoracic, costal, lumbar, sacral, and pelvic regions.

Description of Preservice Work:
The physician determines which osteopathic techniques (e.g., HVLA, muscle energy, counterstrain, articulatory, etc.) would be most appropriate for this patient, in what order the affected body regions need to be treated, and whether those body regions should be treated with specific segmental or general technique approaches. The physician explains the intended procedure to the patient, answers any preliminary questions, and obtains verbal consent for the OMT. The patient is placed in the appropriate position on the treatment table for the initial technique and region(s) to be treated.

Description of Intraservice Work:
The patient is initially in the supine position on the treatment table. Motion restrictions of identified joints are isolated through palpation and treated using a variety of techniques as follows: occipitoatlantal joint and sacrum are treated using muscle energy and counterstrain techniques; right glenohumeral joint and pelvis are treated with articulatory technique; lumbar, thoracic, cervical, and right ankle are treated with passive thrust (HVLA) technique; costal dysfunctions are treated using muscle energy technique. Patient position is changed as necessary for treatment of the individual somatic dysfunctions. Patient feedback and palpatory changes guide selection of further technique application as appropriate.

Description of Postservice Work:

579 Post-care instructions related to the procedure are given, including side effects,
580 treatment reactions, self-care, and follow-up. The procedure is documented in the
581 medical record.

Prior HOD action on similar or same topic:

FISCAL IMPACT: $0

ACTION TAKEN: Referred to the Bureau on Federal Health Programs (BFHP)

DATE: July 20, 2024

SUBJECT: PRIOR AUTHORIZATION REQUIREMENT FOR **PAYMENT** ~~REIMBURSEMENT~~ FOR OSTEOPATHIC MANIPULATIVE TREATMENT

SUBMITTED BY: American Academy of Osteopathy

REFERRED TO: AD HOC Committee

WHEREAS, osteopathic manipulative treatment (OMT) has been shown to result in significant symptom reduction when included in the management of many clinical conditions[1-41]; and

WHEREAS, the presence of somatic dysfunction found on physical examination is the clinical indication for OMT[42-44]; and

WHEREAS, the risk of significant adverse events after performing OMT is very low,[45-48] especially in comparison to commonly used analgesics[49-50]; and

WHEREAS, the American Osteopathic Association (AOA) has specifically published policy statements that include practice guidelines that support the use of OMT in clinical practice[51-53]; and

WHEREAS, nationally physicians are reporting an increase in insurance providers requiring prior authorization for office procedures.[55-56] The requirement for prior authorization **MAY** delay~~s~~ indicated procedures ~~and has been shown to influence clinical decision making, such that providers may choose alternative, potentially less effective or higher risk management options that do not require prior authorization.[55] Physicians using osteopathic manipulative treatment as part of patient management are reporting some insurers are requiring prior authorization for OMT. If OMT is delayed or not used due to the burden of prior authorization, then patients are likely to use common analgesics such as nonsteroidal anti-inflammatory drugs (NSAIDs). The incident of myocardial infarction associated with use of nonsteroidal anti-inflammatory drugs (NSAIDs) is estimated to be 1 in 2400, and the incidence of gastrointestinal bleed is 1 in 87.[49] Between 1997 and 2008, the estimated mortality from a gastrointestinal bleed associated with NSAID use was 20.9%.[50] The AOA has previously reviewed the literature and determined that the risk of significant adverse events associated with OMT to be very small.[53] Therefore, patients are at lower risk of significant adverse events by receiving OMT at the time of evaluation and management service, that if the OMT service is delayed and the patients manage their symptoms using common analgesics, such as NSAIDs.~~

WHEREAS, the requirement for prior authorization of OMT necessitates that patients return on a separate day to receive an OMT procedure and will result in an unnecessary delay in symptom reduction; and

WHEREAS, the AOA has specifically published a policy statement that supports performing OMT on the same day as the clinical evaluation and management service when the physical examination identifies somatic dysfunction that may be contributing to the patient's complaints[54]; and

WHEREAS, the AOA supports payment for both OMT and the evaluation and management services separately when both services are performed on the same day and supported by documentation[54]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) opposes a Prior Authorization requirement for Osteopathic Manipulative Treatment.

104th ANNUAL AOA HOUSE OF DELEGATES MEETING
2024 RESOLUTION ROSTER (700 SERIES) W/ACTION
As of 07-22-24

HOUSE OF DELEGATES' REFERENCE COMMITTEE DESCRIPTION:
Joint Board/House Budget Review Committee (700 series)
This committee reviews the AOA Strategic Plan and Budget.

Res. No.	Resolution Title	Submitted By	Reference Committee	Action
H-700	Approval to Concur with the AOA FY 2025 Expenditures	Finance Committee	Joint Board House Budget Review Committee	Adopted

SUBJECT: Approval to Concur with the AOA FY 2025 Annual Budget

SUBMITTED BY: AOA Finance Committee

REFERRED TO: Joint Board/House Budget Review Committee

WHEREAS the AOA Association's Bylaws Article VII section 1 c. includes that the Board of Trustees "have the responsibility of management of the finances of the Association and shall authorize and supervise, the House of Delegates concurring, with the annual budget for the fiscal year"; and

WHEREAS, the Joint Board/House Budget Review Committee will convene on July 19, 2024 to review and take action on the AOA FY 2025 Operating Budget, the AOA FY 2025 Capital Expenditures Budget and the AOA FY 2025 142 E. Ontario Building Budget reports as submitted; now therefore be it

RESOLVED, the American Osteopathic Association House of Delegates concur with the AOA FY 2025 Annual Budget as provided.

103rd ANNUAL AOA HOUSE OF DELEGATES MEETING
2023 RESOLUTION ROSTER (ALL SERIES W/ACTION)
As of 07-24-23

HOUSE OF DELEGATES' REFERENCE COMMITTEE DESCRIPTIONS:

- Committee on Educational Affairs (200 series)
  This reference committee reviews and considers matters relating to osteopathic education, osteopathic colleges, and postdoctoral training.
- Committee on Professional Affairs (300 series)
  This reference committee reviews and considers matters relating to osteopathic health care facilities, advocacy, legislation, membership and conventions.
- Committee on Public Affairs (400 series)
  This reference committee reviews and considers matters relating to public and industrial health, research and physical fitness.
- Committee on Constitution and Bylaws (500 series)
  This reference committee reviews and considers the wording of all proposed amendments to the AOA's Constitution, Bylaws and the Code of Ethics.
- Ad Hoc Committee (600 series)
  This reference committee reviews and considers materials relating to physician practice issues, affiliate dynamics, insurance and communications activities.
- Joint Board/House Budget Review Committee (700 series)
  This committee reviews the AOA Strategic Plan and Budget.
- Committee on Resolutions
  This committee drafts the resolutions expressive of the sense of the HOD meeting.
- Credentials Committee
  This Committee receives and validates the credentials of the delegates and alternates, maintains a continuous roll call, determines the presence of a quorum, supervises voting and election procedures and makes recommendations on the eligibility of delegates and alternates to a seat in the House when a seat is contested.

SUBJECT: EXPLORING THE IMPACT OF VIRTUAL RESIDENCY INTERVIEWS ON OSTEOPATHIC RESIDENCY MATCH RATE

SUBMITTED BY: Bureau of Emerging Leaders

REFERRED TO: Committee on Educational Affairs

WHEREAS, the COVID-19 pandemic has made an indelible mark on the transition from osteopathic medical student to osteopathic resident including a transition to an overwhelming majority of virtual interviews[6]; and

WHEREAS, in the 2022 National Resident Matching Program (NRMP) Program Directors Survey, 63% of 1,176 responding programs anticipate continuing either part or all of the interview process in a virtual environment in the future[8]; and

WHEREAS, coming out of the pandemic upcoming osteopathic medical graduates receive conflicting information regarding best practices for their upcoming application cycle[2,4] ;and

WHEREAS, the NRMP as well as several specialty societies such as the Association of American Medical Colleges (AAMC), the Alliance for Academic Internal Medicine (AAIM), and Association of Program Directors in Surgery (APDS) recommend that programs conduct virtual interviews for all applicants in the 2022-2023 cycle[1,3,4,5]; however, the American Association of Colleges of Osteopathic Medicine (AACOM) strongly recommends programs give students the option to interview in person or virtually during the 2022-23 cycle[2]; and

WHEREAS, according to the 2022 NRMP program director survey, over 50% of responding programs (all specialties) reported disadvantages with the virtual interview in assessing applicant interest in and understanding of the program as well as a disadvantage in assessing the applicant's interpersonal skills and alignment with interview team[6]; and

WHEREAS, according to the 2022 NRMP program director survey, over 60% of responding programs (all specialties) reported advantages with the virtual interview in regard to reducing applicant related hosting cost, improved efficiency of interview process.[6]; and

WHEREAS, AACOM reports that to date, no formal studies have been done to ensure the bias of virtual interviewing is fully understood ~~and no evidence has provided any guidance for how to mitigate that harm[2]~~; now, therefore be it

32 RESOLVED, that The American Osteopathic Association ~~work with the National~~
33 ~~Resident Matching Program and American Association of Colleges of~~
34 ~~Osteopathic Medicine~~ **ENCOURAGES COLLABORATION AMONG**
35 **RELEVANT STAKEHOLDERS** to analyze the impact of the virtual residency
36 interview process on the osteopathic **RESIDENCY PLACEMENT** ~~match~~ rate.

SUBJECT: ~~MARKETING~~ **PROMOTION OF** AOA BOARD CERTIFICATION

SUBMITTED BY: American Osteopathic College of Occupational and Preventive Medicine

REFERRED TO: Committee on Educational Affairs

WHEREAS, the American Osteopathic Association has deeming authority from the US Department of Education to certify physicians, and

WHEREAS, AOA board certified physicians have historically been supportive and involved members of the AOA and its divisional societies, and

WHEREAS, the AOA, and its state associations' and specialty colleges', collectively known as divisional societies, health and viability will be strengthened by having many early career physicians sit for AOA examinations, and

WHEREAS, graduates of ACGME programs must be informed of and provided reasons for pursuing AOA board certification, and

WHEREAS, the eighteen (18) AOA certifying boards depend upon item-writers who are overwhelmingly practicing physicians, and

WHEREAS, the AOA internally uses the tag line "*Practicing Physicians Certifying Practicing Physicians*", and

WHEREAS, Potential candidates must be provided with reasons for pursuing AOA Board Certification: distinctiveness, value, relevance of exam to practice, affordability, convenience and ease of maintenance. With ease of electronic communication and website branding, this resolution can be implemented with low costs and may help to expand our customer base and thus drive revenues to the certifying boards, specialty colleges, and the AOA, now therefore be it

RESOLVED, that the AOA ~~implement a branding campaign for its certifying boards to include incorporating the tag line "*Practicing Physicians Certifying Practicing Physicians*" on all AOA~~ **PROMOTE ITS** certifying boards' ~~webpages and letterhead~~ and, be it further

RESOLVED, THAT THE AMERICAN OSTEOPATHIC ASSOCIATION (AOA) CERTIFYING BOARD SERVICES WORKGROUP PREPARE A REPORT FOR THE 2024 AOA HOUSE OF DELEGATES.

~~RESOLVED, that the American Osteopathic Association (AOA) develop and broadly distribute a one-page info sheet targeting GME sponsoring institutions,~~

~~program directors, postdoctoral trainees, and board-eligible physicians. This info sheet shall incorporate the tag line "*Practicing Physicians Certifying Practicing Physicians*" and discuss AOA certification in terms of relevance of exam to practice, affordability, value, convenience and ease of maintenance.~~

Background Information: Provided by AOA Staff
Current AOA Policy: None

Prior HOD action on similar or same topic: H641 October 13, 2020 Marketing AOA Board Certification page 271 was brought before the HOD in 2022 and was not adopted.

FISCAL IMPACT: Up to $90,000 in additional expense
The additional expenses would consist of disposing of the current one-page information sheets and reprinting existing one-page information sheets for 27 primary specialties and 48 subspecialties, which would cost an estimated $10,000. Rebranding and updating each board's website could be from 150 to 400 hours at $200 per hour for content and design work by AOA staff. The range of additional expenses would be between $40,000 and $90,000.

ACTION TAKEN Adopted as Amended

DATE July 22, 2023

SUBJECT: AMERICAN OSTEOPATHIC ASSOCIATION BOARD CERTIFICATION

SUBMITTED BY: Iowa Osteopathic Medical Association

REFERRED TO: Committee on Educational Affairs

---

1 WHEREAS, beginning in 2000 the American Osteopathic Association (AOA) began
2 granting osteopathic board certification on a time limited basis; and

3 WHEREAS, physicians with time limited board certification are required to
4 periodically re-certify in order to maintain their AOA board certification; and

5 WHEREAS, since the implementation of the re-certification requirement there have
6 been multiple changes to the process; and

7 WHEREAS, the process of maintaining AOA board certification has become
8 increasingly complicated, time consuming, and costly; and

9 WHEREAS, there is little to no scientific evidence that board re-certification
10 improves the quality of patient care as compared to simple continuing
11 medical education licensure requirements; now, therefore be it

12 RESOLVED, the American Osteopathic Association (AOA) shall create a report
13 which demonstrates the effect, if any, of board re-certification on patient care.

Background Information: Provided by AOA Staff

Current AOA Policy:

H-211 A/2022 Equivalency Policy for Osteopathic Continuous Certification

Prior HOD action on similar or same topic: None

FISCAL IMPACT: Estimated $500,000 - $700,000

For the AOA to conduct its own research and develop a report on the effect of osteopathic continuous certification on patient care, it would cost $500,000 over two years. The expenses would include an additional psychometrician, medical editor, purchasing data, and physician author stipends. If the work was outsourced and conducted by a consulting group, it would be an estimated $700,000. The ABMS Continuing Certification Reference Center (CCRC) contains references across multiple specialties relating to physician Board Certification. Publications regarding **Continuing Certification exams relations to quality and/or patient outcomes** are included on the ABMS CRCC.

SUBJECT: SUPPORT FOR INCLUSION OF OSTEOPATHIC ~~RESIDENCY~~ APPLICANTS ~~in~~ **INTO COMPETITIVE POSTGRADUATE** ~~SURGICAL~~ TRAINING

SUBMITTED BY: Osteopathic Physicians and Surgeons of California/American College of Osteopathic Surgeons

REFERRED TO: Committee on Educational Affairs

WHEREAS, osteopathic physicians (DOs) play a crucial role in providing comprehensive and distinctive healthcare to patients across the United States; and

WHEREAS, **ALL MEDICAL AND** surgical specialties form an integral part of healthcare delivery, encompassing various disciplines such as general surgery, orthopedic surgery, neurosurgery, and others; and

WHEREAS, there has been a concerning trend of a decreasing number of DOs matching to ~~surgical~~ **COMPETITIVE** specialties in recent years (1); and

WHEREAS, the shortage of DOs in ~~surgica~~l **COMPETITIVE** specialties has the potential to impact patient access to high-quality surgical care, particularly in underserved and rural communities; and

WHEREAS, it is essential to promote and support the inclusion of DOs in all medical specialties, including surgical disciplines; and

WHEREAS, addressing the factors contributing to the declining number of DOs matching to ~~surgical~~ **COMPETITIVE** specialties requires a collaborative effort from medical education institutions, professional organizations, and policymakers; and

WHEREAS, the American Osteopathic Association (AOA) already has the infrastructure for mentorship, advocacy, inclusion, and equality in place; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) encourage its specialty colleges to enhance career counseling and mentorship programs for DO students interested in pursuing ~~surgical~~ **COMPETITIVE** specialties, **PARTICULARLY SURGICAL SPECIALTIES** providing students with the necessary guidance and support throughout their educational journey; and, be it further

RESOLVED, that the AOA and its ~~surgical~~ specialty colleges call upon all professional ~~surgical~~ organizations to actively engage with DOs, providing

opportunities for collaboration, research, professional development, and leadership; and, be it further

RESOLVED, that the AOA work closely with the Accreditation Council for Graduate Medical Education (ACGME) and other ~~appropriate~~ **RELEVANT** organizations to educate program directors of accredited ~~surgical specialty~~ programs to accept qualified osteopathic residency applicants.

SUBJECT: Terminology – Volunteer Osteopathic Medical Health Care Delivery - SOURCE: H349-A/18

SUBMITTED BY: Bureau of International Osteopathic Medicine

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of International Osteopathic Medicine has reviewed the policy and determined that it remains relevant; now, therefore be it

RESOLVED, that the Bureau of International Osteopathic Medicine recommends that the following policy be REAFFIRMED.

The American Osteopathic Association (AOA) recommends that the osteopathic medical profession use the following terms to more clearly describe their specific activities when delivering volunteer and/or elective medical care domestically or globally (2013):

- "Osteopathic Medical Outreach," "Osteopathic Global Health" or "Global Health Outreach" – secular-based volunteer work programs outside the everyday practice of an osteopathic physician or physician-in-training, generally carried out in underserved areas, either domestic or global.

- "Osteopathic Medical Mission" or "Medical Mission" – health care activities with specifically religious connotations, affiliations or work.

- "Humanitarian Relief" or "Osteopathic Medical Response" – efforts or programs providing health care assistance and humanitarian aid in emergency situations or disaster relief.

- "Osteopathic Medical Exchanges" or "Osteopathic Medical Rotations/Clerkships" – formal institutional partnerships with international entities (e.g., ministries of health, medical institutions, organizations, etc.) that may include sending or receiving osteopathic physicians, physicians-in-training or other health care trainees for education or outreach programs, to include elective or non-elective osteopathic medical school or residency rotations/clerkships.

SUBJECT: OSTEOPATHIC MANIPULATIVE TREATMENT (OMT) FOR LOW BACK PAIN (RESPONSE TO RES. NO. H-334 - A/2017) - SOURCE: H-358-A/18

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be SUNSET.

Explanatory Statement:
H-358-A/18 is a summary of the current AOA Low Back Pain Clinical Practice Guidelines, H325 - A/20 Low Back Pain Clinical Practice Guidelines, Revision of. The AOA published the original clinical practice guidelines approved by the HOD in the JAOA in 2010 under the title American Osteopathic Association Guidelines for Osteopathic Manipulative Treatment (OMT) for Patients with Low Back Pain. The revision of the guidelines was approved by the HOD in 2015 and published in the JAOA in 2016. The HOD reaffirmed the guidelines in 2020.

H325 - A/20, the current approved version of the guidelines, will be included in the sunset review process 2025. The guidelines will be reviewed and updated for submission to the HOD in 2025. Because the guidelines are reviewed and updated every 5 years, there is no need for a summary of the guidelines to continue as a separate policy of the AOA. The complete guidelines can be accessed on the AOA policy search website (https://osteopathic.org/about/leadership/aoa-policy-statements/) or at this link: Policy_H325-A-20_Low_Back_Pain_Clinical_Practice_Guidelines,_Revisions_of-2.pdf (osteopathic.org)

H358-A/18 Osteopathic Manipulative Treatment (OMT) for Low Back Pain (Response to RES. NO. H-334 - A/2017)
Policy Statement

The American Osteopathic Association supports the attached white paper entitled "Osteopathic Manipulative Treatment (OMT) for Low Back Pain."

Osteopathic Manipulative Treatment (OMT) for Low Back Pain

Background

The American Osteopathic Association first published clinical practice guidelines for Osteopathic Manipulative Treatment (OMT) for Patients with Low Back Pain in 2010.[1] The revision of the guidelines was approved by the AOA House of Delegates in 2015 and published in the JAOA in 2016.

The summary of the guidelines states:

The American Osteopathic Association recommends that osteopathic physicians use Osteopathic Manipulative Treatment (OMT) in the care of patients with low back pain. These guidelines update the AOA guidelines for osteopathic physicians to utilize OMT for patients with nonspecific acute or chronic LBP. Evidence from systematic reviews and meta-analyses of randomized clinical trials (Evidence Level 1a) supports this recommendation.[2]

Both versions of the guidelines were accepted for inclusion in the National Guideline Clearinghouse (NGC). NGC is an initiative of the Agency for Healthcare Research and Quality (AHRQ), U.S. Department of Health and Human Services. (https://www.guideline.gov/). The NGC mission is to provide physicians and other health care professionals, health care providers, health plans, integrated delivery systems, purchasers and others an accessible mechanism for obtaining objective, detailed information on clinical practice guidelines and to further their dissemination, implementation, and use. (NOTE FROM STAFF 3/2023: THE NGC NO LONGER EXISTS.)

The current guidelines are based on a systematic review of the literature on OMT for patients with low back pain and a meta-analysis of all randomized controlled trials of OMT for patients with low back pain in ambulatory settings by Franke et al.[3] Additionally, they build upon the 2010 AOA Clinical Practice Guidelines for Low Back Pain1 and the 2005 systematic review by Licciardone et al.[4] on which the previous guidelines were based. Franke et al.'s conclusions further strengthen the findings that OMT reduces LBP. Franke et al. specifically state that clinically relevant effects of OMT were found for reducing pain and improving functional status in patients with acute and chronic nonspecific LBP and for LBP in pregnant and postpartum women at 3 months post treatment. [3]

Evidence review for the 2015 Guidelines

In August 2014, a member of the AOA Low Back Pain Task Force conducted a literature search using keywords including back pain, low back pain, Osteopathic Manipulative Treatment (OMT), osteopathic, manual therapy and randomized controlled trials (RCT) in PubMed, CINAHL, Science Direct, and Springer Link databases from 2003-2014. During this search, the systematic review by Franke et al. published in August 2014 was discovered and a determination was made to base the revised guidelines on this publication. At the same time, personal communications yielded two additional articles by Hensel[5] and Licciardone[6] published after the literature review by Franke et al. No other studies were identified.

Two members of the AOA Low Back Pain Task Force reviewed the research design of these studies according to the methods used in the Franke et al. systematic review and determined that both articles met the rigorous criteria applied by the Franke et al researchers. As stated in the Franke et al. publication: "Only randomized clinical trials were included; specific back pain or single treatment techniques studies were excluded. Outcomes were pain and functional status. GRADE was used to assess quality of evidence." Franke et al. also concluded that "larger, high-quality randomized controlled trials with robust comparison groups are recommended."

Both Hensel's and Licciardone's studies were larger than any previous studies and were high quality RCTs with robust comparison groups. The Task Force concluded that these studies were of high quality and low bias in the sense that they incorporated randomization, blinding, baseline comparability between groups, and addressed patient compliance and attrition. The Task Force agreed that these two articles would have met the inclusion criteria of the Franke et al. team and would have been included in the Franke et al. systematic review had they been published earlier. The Task Force believes that the conclusions of the studies support the guidelines and are not contradictory to them. Therefore, they were included in the AOA guidelines.

Results

As stated in the 2016 AOA Guidelines for Osteopathic Manipulative Treatment (OMT) for Patients with Low Back Pain[2], OMT significantly reduces pain and improves functional status in patients, including pregnant and postpartum women, with nonspecific acute and chronic LBP.

OMT versus other interventions for acute and chronic nonspecific low back pain:
Franke et al.[3] found that in acute and chronic non-specific LBP, moderate-quality evidence suggested OMT had a significant effect on pain relief (MD:-12.91, 95% CI: -20.00 to -5.82) and functional status (SMD:-0.36, 95% CI: -0.58 to - 0.14).

OMT versus other interventions for chronic nonspecific low back pain:
More specifically, in chronic nonspecific LBP, the evidence from Franke et al[3] suggested a significant difference in favor of OMT regarding pain (MD:-14.93, 95% CI:-25.18 to -4.68) and functional status (SMD:-0.32, CI:-0.58 to -0.07).

OMT versus untreated for nonspecific low back pain in postpartum women:
For nonspecific LBP postpartum, Franke et al.[3] found that moderate-quality evidence suggested a significant difference in favor of OMT for pain (MD: -41.85; 95% CI: -49.43 to -34.27) and functional status (SMD: -1.78; 95% CI: -2.21 to -1.35).

OMT versus usual obstetric care, sham ultrasound, and untreated for nonspecific low back pain in pregnant women:
When examining nonspecific LBP in pregnancy, Franke et al.[3] found low-quality evidence that suggested a significant difference in favor of OMT for pain (MD: -23.01; 95% CI: -44.13 to -1.88) and functional status (SMD:-0.80; 95% CI: - 1.36 to -0.23).

127 Two other important studies published subsequent to the Franke et al. systematic review
128 address LBP in pregnant women and enhance the findings of Frank et al. Hensel et al.[5]
129 found that OMT was effective for mitigating pain and functional deterioration compared
130 with usual care only; however, OMT did not differ significantly from placebo ultrasound
131 treatment. In yet another study conducted by Licciardone et al.[6], the investigators found
132 that during the third trimester of pregnancy OMT has medium to large treatment effects in
133 preventing progressive back-specific dysfunction.
134
135 **Next Steps**
136 Since the systematic review for the current guidelines was completed, additional studies
137 supporting the use of OMT for low back pain have been published.[7-11] Licciardone et al.
138 found that an OMT regimen for chronic low back pain showed significant and relevant
139 measures for recovery[7], and that subgroup analysis by baseline levels of chronic low back
140 pain is a simple strategy to identify patients who have substantial improvement with OMT.[8]
141 Hensel et al. evaluated the safety of an OMT protocol[9] during the third trimester of
142 pregnancy and determined that the protocol is safe with regard to labor and delivery
143 outcomes.[10] In a systematic review and meta-analysis, Franke et al. looked at the
144 effectiveness of OMT for low back pain in pregnant or postpartum women and found that
145 OMT produces clinically relevant benefits for this population.[11]
146
147 The current guidelines were approved by the AOA House of Delegates in 2015 and thus
148 will sunset in 2020. Therefore, the AOA will need to revise the guidelines for submission to
149 the 2020 HOD. The National Guideline Clearinghouse also requires a revision every five
150 years for posting to their website. (Please note that as of this writing, funding to support the
151 NGC has not yet been secured beyond July 16, 2018; NGC has established a cut-off date
152 of March 5, 2018 for guideline submissions. The future of the NGC is still unclear.)
153 Revision of the guidelines will require a new systematic review and meta-analysis of the
154 literature. Staff anticipates beginning the revision process for the guidelines in the spring
155 of 2019. (NOTE FROM STAFF 3/2023: THE NGC NO LONGER EXISTS.)

SUBJECT: PHYSICIAN FEES AND CHARGES - SOURCE: H330-A/18

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is scheduled for sunset review; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy and determined that it remains relevant; now. therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED.

The American Osteopathic Association upholds the following policy on Physician Fees and Charges.

PHYSICIAN FEES AND CHARGES

1. Physician's Fees

A physician's fees should be based on the medical services provided to the patient, with due respect for:

a. The difficulty and/or uniqueness of the services;
b. The time, skill, and experience required;
c. Customary fees charged for the same service in the same community;
d. Overhead and professional liability costs.

2. Excessive Fees

A physician should not collect excessive fees.

3. Reduced Fees

Physicians have the right to offer ~~his/her~~**THEIR** services at a reduced fee, or without fee, when hardships exist or professional courtesy dictates, if ~~he/she~~ **THEY** desire~~s~~ to do so.

4. Specialty Designation

A fee should not be dependent upon a physician's specialty designation but upon the services provided. Any physician who provides a service for which ~~he/she~~ **THEY** ~~is~~ **ARE** properly trained has the right to charge the prevailing rate for such service, whether the service is performed by a family physician, a surgeon, an internist, or any other specialist.

5. Contingency Fees

A physician's fees should be based directly on professional services rendered and not contingent on uncertain outcome. It is, therefore, deemed unethical for a physician to charge contingency fees.

6. Division of Fees

Group practices and partnerships may ethically divide income based on service, contribution to the group, and/or contractual obligations.

7. Fee Splitting

No physician may ethically split a fee to, or accept a fee from, another physician solely for the referral of a patient nor shall a physician accept payments from a hospital, clinic, laboratory, or other healthcare facility based upon patient referrals to that establishment. Surgeons may ethically engage other physicians to assist in the performance of a surgical procedure; however, the financial arrangements should be made known to the patient. This principle applies whether or not the assisting physician is the referring physician.

8. Referrals to Suppliers

Physicians shall not accept payment of any kind from any source such as a hospital, clinic, laboratory, pharmaceutical company, device manufacturer, pharmacist or other healthcare provider or supplier, for referring patients to said facility or prescribing such entity's products. All referrals and prescriptions must be based on the patient's needs and sound medical decision-making, all in the patient's best interest.

9. Form Completion Charges

A physician may charge for completion of forms.

10. Copying Charges

A physician may charge the prevailing rate for the copying of patient records and postage incurred in mailing.

11. Missed Appointments

A physician may ethically charge for missed appointments, or appointments cancelled less than 24 hours in advance, provided:

a. The patient has been previously notified in writing of the policy;
b. Utmost consideration is given to the patient, including the circumstances involved;
c. The practice is resorted to infrequently;
d. The physician's patient load is considered.

12. Delinquent Accounts

Harsh or grossly commercialized collection practices are discouraged. If a physician has experienced problems dealing with patients who have delinquent accounts, ~~he/she~~ **THEY** may properly request payment for service at the time of treatment, or may add interest or other late-payment charges in accordance with state and federal laws. The patient must be notified of such a policy in advance by one or more of the following:

a. Posting a notice in the waiting room;
b. Distribution of patient handbooks containing the policy;
c. Notification by special letter;
d. Notation of the policy on the billing statement before the charge is incurred.

The American Osteopathic Association encourages physicians to make exceptions to implementing these collection charges in cases of financial hardship, after consultation with the involved patient.

The exception to waiving collection charges is the patient who receives payment for medical services from ~~his/her~~ **THEIR** insurance company, and then fails to make payment to the physician. In this case, all legal pressure may be brought to bear on the patient and the insurance company in order to discourage this practice, both by the insurance company and by the patient.

13. **SUBSCRIPTION BASED PAYMENT**

A PHYSICIAN MAY CHOOSE TO CHARGE A REPEATING FEE (MONTHLY, YEARLY, OR OTHERS), FOR PROVISION OF CARE. IF A PHYSICIAN CHOOSES THIS MODEL OF PAYMENT, THERE SHOULD BE CLEAR EXPECTATIONS ABOUT WHAT CARE AND SERVICES WOULD BE COVERED FOR THIS FEE STRUCTURE.

~~**13**~~**. 14** Legal Restrictions
The foregoing statements are subject to any restrictions imposed by any state and federal laws or contractual obligations.

4 RESOLVED, that the Council on Economic and Regulatory Affairs recommends that
5 the following policy be REAFFIRMED.

6 The American Osteopathic Association:

7 1. Advocates the use of an independent profession/specialty matched
8 medical peer review process for physicians identified as outliers.

9 2. Opposes the continuation of random pre-payment audits of claims.

10 3. Advocates that any auditing of outpatient medical records be conducted on
11 a retrospective post-payment basis and is statistically sound using
12 determinations in effect at the time of claim.

13 4. Opposes the practice that requires physicians to repay alleged over-
14 payments before all appeal remedies have been exhausted.

15 5. Advocates immunity from Medicare sanctions for physicians voluntarily
16 participating in Medicare sponsored alternative payment models.

17 6. Advocates that the Centers for Medicare and Medicaid Services (CMS)
18 develop educational programs that help physicians identify mistakes or
19 misunderstandings with their coding so as to avoid civil penalties.

SUBJECT: MEDICAL RECORDS- POLICY/GUIDELINES FOR THE MAINTENANCE, RETENTION, AND RELEASE OF - SOURCE: H321-A/18

SUBMITTED BY: Council on Economic and Regulatory Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is scheduled for sunset review; and

WHEREAS, the Council on Economic and Regulatory Affairs has reviewed the policy and determined that it remains relevant; and

WHEREAS, language has been amended to ensure it is not construed, in any way, to oppose information blocking provisions codified in regulation in 2020, and to reaffirm AOA's support for privacy protections established under HIPAA, to share only the minimum necessary patient information; now, therefore be it

RESOLVED, that the Council on Economic and Regulatory Affairs recommends that the following policy be REAFFIRMED AS AMENDED.

The American Osteopathic Association (AOA) supports the use of appropriate single ICD codes should suffice to justify the ordering of laboratory tests, if those tests are ordered as part of the evaluation of a disease process or in the context of an already known disease; and the AOA will communicate this policy to the Centers for Medicare and Medicaid Services, the Department of Health and Human Services, health insurance companies and to the U.S. Congress.

MEDICAL RECORDS-POLICY / GUIDELINES FOR THE MAINTENANCE, RETENTION AND RELEASE OF

The American Osteopathic Association urges osteopathic physicians to become familiar with the applicable laws, rules or regulations on retention of records and patient access to medical records in their states; and approves the following Policy/ Guidelines for the Maintenance, Retention and Release of Medical Records (1998; revised 2003; 2008; reaffirmed as amended 2013).

POLICY/GUIDELINES FOR THE MAINTENANCE, RETENTION AND RELEASE OF MEDICAL RECORDS

A. Release of records*:* The record is a confidential document involving the osteopathic patient-physician relationship and shall not be communicated to any other person or entity without the patient's prior written consent, unless required by law. **TRANSMISSION OF PATIENT DATA TO A THIRD PARTY SHALL ONLY ENTAIL THE MINIMUM NECESSARY TO ACHIEVE THE INTENDED PURPOSE.** ~~Notes made in treating a patient are primarily for the osteopathic physician's own use and constitute his or her personal property.~~ Under The Health Insurance

Portability and Accountability Act of 1996 (HIPAA), patients have the right to request access to review and copy certain information in their medical records. In addition, HIPAA provides patients with the right to request an amendment to health information in their medical records. HIPAA also provides patients with the right to request an "accounting of disclosures" of their protected health information. Upon written request of the patient, an osteopathic physician shall provide a copy of, or a summary of, the record to the patient or to another physician **OR OTHER PROVIDER**, an attorney, or other person or entity authorized by the patient as provided by law. Medical information shall not be withheld because of an unpaid bill for medical services.

B. Records upon retirement or departure from a group*:* A patient's records may be necessary to the patient in the future not only for medical care but also for employment, insurance, litigation or other reasons. When an osteopathic physician retires or dies, patients shall be notified in a timely manner and urged to find a new physician and shall be informed that, upon authorization, records will be sent to the new physician. Records which may be of value to a patient, and which are not forwarded to a new physician shall be retained consistent with the privacy requirements under federal and/or state laws and regulations, either by the treating osteopathic physician, or such other person lawfully permitted to act as a custodian of the records. The patients of an osteopathic physician who leaves a group practice must be notified that the osteopathic physician is leaving the group. It is unethical to withhold the address of the departing osteopathic physician if requested by the patient or his or her authorized designee. If the responsibility for notifying patients falls to the departing osteopathic physician rather than to the group, the group shall not interfere with the discharge of these duties by withholding patient lists or other necessary information.

C. Sale of medical practice: In the event that an estate of, or the practice of an osteopathic physician's medical practice is sold, the assets of such practice or estate, both hard and liquid, should be transferred in a mutually agreeable manner consistent between seller and buyer. If medical records of the estate or of the practicing physician are included in such sale they should be transferred between seller and buyer in accordance with state and federal guidelines to remain compliant with the confidentiality rules and regulations which govern the security of such records, allowing the buyer to have the opportunity to continue caring for those patients.

All active patients should be notified that the osteopathic physician (or the estate) is transferring the practice to another physician who will retain custody of their records and that at their written request, within a reasonable time as specified in the notice, the records or copies will be sent to any other physician of their choice. Rather than destroy the records of a deceased osteopathic physician, it is better that they be transferred to a practicing physician who will retain them consistent with privacy requirements under federal and/or state laws and regulations and subject to requests from patients that they be sent to another physician. A reasonable charge may be assessed for the cost of duplicating records. Any sale of a medical practice should conform to IRS and federal guidelines.

D. Retention of records: Osteopathic physicians have an obligation to retain patient records. The following guidelines are offered to assist osteopathic physicians in meeting their ethical and legal obligations:

1. Medical considerations are the principal basis for deciding how long to retain medical records. For example, operative notes and chemotherapy records should always be part of the patient's chart. In deciding whether to keep certain parts of the record, an appropriate criterion is whether an osteopathic physician would want the information if he or she were seeing the patient for the first time.

2. If a particular record no longer needs to be kept for medical reasons, the osteopathic physician should check state laws to see if there is a requirement that records be kept for a minimum length of time. Most states will not have such a provision. If they do, it will be part of the statutory code or state licensing board.

3. In all cases, medical records should be kept for at least as long as the length of time of the statute of limitations for medical malpractice claims. The statute of limitations may be three or more years, depending on the state law. State medical associations and insurance carriers are the best resources for this information. If a patient is a minor, the statute of limitations for medical malpractice claims may not begin to run until the patient reaches the age of majority.

4. Whatever the statute of limitations, an osteopathic physician should measure time from the last personal professional contact with the patient.

5. The records of any patient covered by Medicare or Medicaid must be kept in accordance with the respective regulations.

6. In order to preserve confidentiality when discarding old records, all documents should be destroyed. Before discarding old records, patients should be given an opportunity to claim the records or have them sent to another physician, if it is feasible to give them the opportunity.

SUBJECT: EXPERT WITNESS & PEER REVIEW – SOURCE:H341-A/18

SUBMITTED BY: Council of State Government Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Council on State Health Affairs has reviewed the policy and determined that it remains relevant; now, therefore be it

RESOLVED, that the Council on State Health Affairs recommend that the following policy be REAFFIRMED AS AMENDED:

WHITE PAPER - EXPERT WITNESS & PEER REVIEW

Introduction:

The days when physicians would not testify against fellow colleagues because they did not want to break the code of silence previously associated with the profession are long over. [1] Today, it is common practice for physicians to serve as medical experts in medical malpractice actions. The 1993 U.S. Supreme Court case *Daubert v. Merrell Dow Pharmaceutical* gave the Court an opportunity to establish guidelines for expert witness testimony. The Court concluded that expert witness testimony should be scientifically valid. Additionally, the Court said that testimony is valid if there has been peer review and general acceptance of the testimony.

There is a great deal of skepticism about the role of the physician-expert, and whether an expert's testimony is valid.[2] Some physicians travel the country routinely testifying in malpractice actions, and in many instances they are considered "hired guns" who will alter their opinions for the highest bidder.[3] Concern over speculative expert testimony has led critics to call for stricter scrutiny of expert testimony and to appeal to professional organizations to take a more active role in monitoring physicians who give inaccurate testimony.[4]

Peer Review of Osteopathic Manipulative Treatment

The integrity of both judicial and administrative proceedings regarding physicians and alleged medical malpractice depends in part on the honest, unbiased testimony of expert witnesses. Such testimony serves to clarify and explain technical concepts and to articulate professional standards of care. To that end, the AOA has adopted the policy that "osteopathic physicians acting as medical directors, expert witnesses, or peer reviewers, and affecting patient treatment, outcome of care, and access to care, are practicing osteopathic medicine." This statement suggests that expert witness testimony should be subject to peer review.

The introduction of a peer review requirement, however, presents an interesting question for osteopathic physicians: namely, should MDs be allowed to review the work of osteopathic physicians without the input of another DO? One of the important elements of osteopathic training is osteopathic manipulative treatment (OMT), a practice unique to the osteopathic profession. Neuromusculoskeletal Medicine and Osteopathic Manipulative Medicine (NMM/OMM) is a unique specialty within the osteopathic profession that should be reviewed by a like peer. Because both DOs and MDs are licensed for the unlimited practice of medicine in all 50 states, members of either branch of the medical profession can generally testify concerning the actions of the members of the other branch of the profession. However, considering the uniqueness of OMT, MDs will not likely have the education or training to determine if the actions of osteopathic physicians using OMT were within the appropriate standard of care.

In addition, peer review takes place in both hospital and outpatient settings, and by third party payers. Various entities—including the Centers for Medicare and Medicaid Services, managed care organizations, third party payers, and workers' compensation programs—often use peer review for determinations in reimbursement decisions. In addition, many insurance carriers have claims for the service of OMT "peer reviewed" by health care providers that are either not trained or who are inadequately trained in Osteopathic Principles and Practices. Osteopathic physicians are highly trained in the integration of expert, cost effective, and judicious application of OMT when indicated and appropriate.

Healthcare Setting Peer Review

The AOA has always fostered and encouraged peer review, both through voluntary mechanisms and, since 1972, through Federal Peer Review Programs. The AOA wishes to reaffirm its commitment to peer review regardless of federal policy or program changes. Osteopathic medicine must promote and facilitate peer review among and through its members in health care settings.

Medical Societies & Expert Witness Policies

A number of medical organizations have created programs to address the problem of inaccurate expert witness testimony.

In 1989, the American Academy of Pediatrics (AAP) created policy on appropriate expert witness testimony that includes concerns specific to pediatric cases, as well as suggestions for improving the quality of expert testimony by implementing certain requirements for expert witnesses.[5] the American Academy of Family Physicians (AAFP) supports similar requirements.[6] The American Association of Neurological Surgeons (AANS) has guidelines for expert witnesses and operates a professional conduct program under which members can be disciplined for unprofessional conduct if they violate these guidelines.[7] In 2004, the American Academy of Orthopedic Surgeons (AAOS) created an expert witness program that involves

education and advocacy components.[8] The American Society of Anesthesiologists (ASA) also maintains an expert witness testimony review program under which ASA members may submit complaints against other members for violating ASA guidelines on expert testimony.[9]

In addition to the previously described medical societies, other medical organizations that track and monitor their member testimonies include the North American Spine Society and the American College of Osteopathic Obstetricians & Gynecologists (ACOOG), American College of Obstetricians and Gynecologists (ACOG). The ACOG has developed a "qualifications" document~~s~~ that spells out to members the responsibilities and obligations of expert witnesses.[10] Finally, both the American College of Emergency Physicians **(ACEP)** and the American College of Surgeons mandate that their members submit transcripts of depositions and testimony.

Expert Testimony in the Court Room

Judges determine the admissibility of evidence, including expert testimony, based upon judicially created standards and the rules of evidence applicable to their jurisdiction. As a result, the requirements a physician must meet to qualify as an expert witness can be unclear and vary from state to state. An increasing number of states also require physicians to meet statutorily-defined requirements relating to licensure, specialization and practice activity in order to qualify as an expert witness in a medical liability case.[11]

Licensed in the State

Twenty-Four states have statutes that address the licensure required to testify as an expert witness in a medical liability case. Nearly all of these statutes simply require the physician to be licensed to practice in one or more of the fifty states. However, Tennessee requires physician experts to be licensed in the state or a state bordering Tennessee. In addition, Florida and South Carolina require out of state experts to become certified or licensed, respectively, to qualify as an expert witness. **TWENTY-FOUR STATES REFER TO OR INCORPORATE RULE 702 - EXPERT WITNESS IN THEIR STATUTES. THIS RULE DEFINES AN EXPERT WITNESS BASED ON THEIR KNOWLEDGE, SKILL, EXPERIENCE, TRAINING, OR EDUCATION WITHOUT EXPLICITLY STATING THAT LICENSURE IS A PREREQUISITE.**

Active Practice or Teaching

Twenty-three states have statutes that require medical experts to have devoted a certain percentage of their professional time to active practice or teaching, or to have been engaged in active practice or teaching within a certain number of years. Arizona, Kansas, Michigan, New Jersey, North Carolina, Ohio and West Virginia require medical experts to have devoted at least half of their professional time to active clinical practice or teaching.

Board Certification and Specialization

Thirty-two states have statutes that address the specialization or board certification a physician must possess to testify as a medical expert. **TWENTY-TWO STATES REQUIRE AN EXPERT TO BE TRAINED AND EXPERIENCED IN THE SAME SPECIALTY, SUBSPECIALTY, DISCIPLINE OR SCHOOL OR PRACTICE AS THE PERSON THE EXPERT IS TESTIFYING ABOUT.** ~~Alabama, Alaska, California, Connecticut, Florida, Louisiana, Michigan, Mississippi, Montana, Nevada, North Carolina, Ohio, Texas, Virginia and West Virginia require an expert to be trained and experienced in the same specialty, subspecialty, discipline or school or practice as the person the expert is testifying about.~~ If the testimony concerns the practice of a board-certified physician in the field in which he or she is certified, ~~Arizona, Delaware, Maryland, New Jersey, Ohio~~, **TWELVE STATES** require the expert to be board certified in the same or similar field as well.

Pennsylvania and South Carolina permit a medical expert to either be board certified or have professional knowledge and experience in the practice area or specialty in which the opinion is offered.

Pretrial Certificates/Affidavits of Merit

Another technique employed by states to weed out frivolous claims and unnecessary expert testimonies are “certificates of merit,” also known as “affidavits of merit.” A certificate of merit is an affidavit, signed by the plaintiff’s expert witness and attached to the original complaint, certifying that the expert witness is knowledgeable of the relevant facts of the case, is qualified to express an opinion on the merits of the case, and certifying that there is a reasonable and meritorious cause for the filing of the action. In addition, the certificate of merit officially states that the expert is qualified to make a determination of whether the defendant physician departed from the standard of care in treating the injured plaintiff. Twenty-six states currently require a physician to verify that a malpractice lawsuit has merit before it can be filed.

Other Provisions

Aside from the more traditional criteria stated above, some states adopt a broader set of expert witness qualifications. Idaho requires that expert witnesses to have knowledge of the community standards to which his or her testimony is addressed. Nevada requires expert medical testimony to be given by a provider who practices or has practiced in an area that is substantially similar to the type of practice engaged in by the defendant physician at the time of the alleged negligence. Rhode Island only requires “knowledge, skill, experience, training or education” to qualify as an expert witness. Oklahoma, **AND** Pennsylvania ~~and Illinois~~ permit retired physicians to serve as expert witnesses. ~~Illinois allows retired physicians to testify if they can provide proof of attendance and completion of continuing education courses for three years previous to giving testimony.~~

Some states have also clarified that a physician who provides expert testimony is engaged in the practice of medicine or is otherwise subject to discipline by the state’s licensing board for providing false, deceptive, or misleading testimony. California, Florida, Mississippi, Ohio and South Carolina have statutes that subject

expert witnesses to discipline by the state's licensing board. In 2002, the state medical board in North Carolina ordered a physician's license to be suspended for one year due to expert testimony he provided under the theory that the physician had engaged in unprofessional conduct.

Expert Testimony in Administrative and Disciplinary Hearings

Whereas traditional courts and juries have, for the most part, adopted requirements that expert testimony be used in medical malpractice cases, professional licensing boards have responded differently. Medical licensing boards work to police the actions of physicians by establishing and enforcing the standards of medical care within their communities, frequently without the aid of expert testimony.[12] This is because in most administrative settings the judge is trier of both fact and law. Expert testimony is taken to assist the judge as the trier of fact, but it is not required.[13] In some settings, experts will testify only by deposition; whereas in others, live testimony is always needed. Additionally, it is possible that the review panel can provide opinion evidence.

Policy Behind Adopting a Requirement for Expert Testimony in Administrative Hearings

The expert testimony requirement serves three main purposes. First, expert testimony protects the defendant's right to review rather than allow a professional board to base its decision only on its own expertise.[14] Second, having expert testimony in the record makes it easier for the defendant to challenge the evidence used to support the professional board's claim.[15] Finally, many courts recognize that members of a professional board are not necessarily qualified to make a medical opinion, and do not want to put a defendant's license at risk under those circumstances. However, most jurisdictions, even those who require expert testimony, often can decide when to apply the requirement. Consequently, states have a tendency to modify or soften their rules concerning the admission of expert testimony in administrative hearings.[16]

Compensation and Disclosure Requirements

In addition to peer review and strengthened expert witness qualifications, the unregulated compensation an expert witness may charge for medical testimony has contributed to the "hired gun" perception. Exorbitant compensation for expert witness testimony dilutes the integrity of the medical profession by creating the perception that these witnesses have an incentive to tailor their testimonies to the needs of the attorneys who pay them.-[17] This perception is exacerbated by the practice of making the payment of an expert witness's fee contingent upon the outcome of the case. In most jurisdictions, the common law rule forbade paying expert witnesses a contingent fee.[18] Arizona, ~~Arkansas~~, Florida, Michigan, ~~Mississippi,~~ New Hampshire, New Jersey, North Carolina, ~~Utah,~~ and Wisconsin now have statutes that prohibit paying expert witnesses on a contingency basis or make expert testimony provided according to a contingent fee arrangement inadmissible.

AOA Policy statements

Appropriate standards are necessary to govern the use of expert testimony and peer review. The following statements represent the AOA's position on appropriate use of expert witness testimony and peer review:

The AOA believes that based on the *Daubert* decision, a trial court must determine if the opinion of the expert is reliable. In making that determination, the trial court may consider: (1) whether the theory or technique has been or can be tested; (2) whether the theory or technique has been proven by the peer review process or published within the scientific community; (3) the known rate of error, or the potential rate of error; (4) whether standards exist in the particular field or science from which the expertise comes; and (5) whether the theory or technique that is the subject of the opinion or testimony has been generally accepted by the particular scientific community;

The AOA finds that as a result of the *Daubert* decision, the medical community has developed guidelines for evidence-based medicine. Evidence-based medicine may be authenticated by three sources: (1) large, controlled, randomized clinical trials; (2) observational scientific studies; and (3) consensus recommendations from a panel of recognized experts in the clinical or research field;[19]

The AOA affirms its commitment to promote and facilitate peer review among and through its members;

The AOA supports a policy that peer review of osteopathic physicians should be conducted by other osteopathic physicians, whenever possible, to account for osteopathic physicians' unique training in Osteopathic Principles and Practices and OMT;

The AOA believes that when the standard of care involves a procedure unique to the osteopathic practice of medicine, such as OMT, then only osteopathic physicians should conduct peer review of DOs;

The AOA pledges to pursue any and all legal and legislative recourses to assure that insurance claims reviewed by peers regarding the provision of OMT procedures may only be conducted by qualified osteopathic physicians;

The AOA believes that the voluntary hospital peer review process remains the most natural and appropriate vehicle through which to effect institutional peer review;

The AOA believes that all peer review should remain confidential and undiscoverable except to the physician who is the subject of the peer review;

The AOA believes that all review under the peer review organization program of osteopathic diagnosis and therapeutics be performed by osteopathic physicians.

The AOA believes that an osteopathic physician's failure to provide truthful testimony or peer review constitutes unprofessional conduct subject to peer review consistent with the AOA's policy that expert testimony and peer review by osteopathic physicians constitute the practice of medicine;

The AOA encourages state divisional societies to develop and implement appropriate procedures and measures to monitor and discipline member expert witnesses who provide fraudulent and misleading testimony;

The AOA pledges to support any osteopathic society that wishes to develop its own program to discipline physicians for unprofessional conduct related to expert witness testimony;

The AOA pledges to act as a clearinghouse for advice on the issue of expert witness testimony;

The AOA supports updating state licensing laws to include "providing false or misleading information in the role of expert witness" in the definition of unprofessional conduct;

The AOA's believes that an expert witness should not provide medical testimony that is false, misleading, or without medical foundation;

The AOA's believes that an expert witness should have a current, unrestricted license to practice in the same state as the defendant physician. Preferably, the expert witness should be board certified in the same medical specialty as the defendant and the certifying board should be one that is recognized by the state;

The AOA's believes that an expert witness should be three (3) years removed from residency training and should be engaged in active medical practice or have teaching experience, or any combination thereof in the same specialty or subspecialty, for a period of no less than three (3) years prior to the date of the testimony. In cases where the physician serving as an expert witness has completed a forensic science, pediatric child abuse, or other approved forensic fellowship and where the expert testimony specifically relates to that training, the requirement of being three (3) years removed from residency training is waived;

298 The AOA encourages state licensing boards to grant temporary licensure to out-of-
299 state expert witnesses upon a showing of the inability to find an in-state expert
300 witness to make them subject to disciplinary sanctions of the state licensing boards;
301
302 The AOA opposes allowing expert witnesses to accept compensation that is
303 contingent on the outcome of the case;
304
305 The AOA believes that an expert witness' compensation must be proportionate to
306 the time, level of expertise, and effort given for preparing and attending court
307 appearances; and
308
309 The AOA supports a policy that imposes mandatory disclosure to the court and
310 opposing parties of the qualifications of the expert witness, access to copies of all
311 publications authored by the witness in the preceding ten (10) years, and access to
312 transcripts from all cases in which the witness has testified as an expert witness in
313 the preceding four (4) years.

SUBJECT: UNIFORM EMERGENCY VOLUNTEER HEALTH PRACTITIONERS ACT (UEHVPA) – SOURCE H347-A/18

SUBMITTED BY: Council of State Health Affairs

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the current version of the Uniform Emergency Volunteer Health Practitioners Act ('UEHVPA") contains sections 11 – 15, which are not included in our existing policy; and

WHEREAS, the Council on State Health Affairs has reviewed the policy and additional sections, and determined all to be relevant; now, therefore be it

RESOLVED, that the Council on State Health Affairs recommend that the following policy be REAFFIRMED AS AMENDED:

Uniform Emergency Volunteer Health Practitioners Act (UEVHPA)

Policy Statement

The American Osteopathic Association supports enactment of the ~~following~~ Uniform Emergency Volunteer Health Practitioners Act (UEVHPA) **WITH AMENDENTS TO INCLUDE D.O.S WHEREVER M.D.S ARE LISTED.** ~~as written by the National Conference of Commissioners on Uniform State Laws and amended by the AOA~~.

~~**UNIFORM EMERGENCY VOLUNTEER HEALTH PRACTITIONERS ACT (UEVHPA)**~~

~~SECTION 1. SHORT TITLE. This [act] may be cited as the Uniform Emergency Volunteer Health Practitioners Act.~~

~~SECTION 2. DEFINITIONS. In this [act]:~~

~~(1) "Disaster relief organization" means an entity that provides emergency or disaster relief services that include health or veterinary services provided by volunteer health practitioners and that:~~

~~(A) is designated or recognized as a provider of those services pursuant to a disaster response and recovery plan adopted by an agency of the federal government or [name of appropriate governmental agency or agencies]; or~~

~~(B) regularly plans and conducts its activities in coordination with an agency of the federal government or [name of appropriate governmental agency or agencies].~~

~~(2) "Emergency" means an event or condition that is an [emergency, disaster, or public health emergency] under [designate the appropriate laws of this state, a political subdivision of this state, or a municipality or other local government within this state].~~

~~(3) "Emergency declaration" means a declaration of emergency issued by a person authorized to do so under the laws of this state [, a political subdivision of this state, or a municipality or other local government within this state].~~

~~(4) "Emergency Management Assistance Compact" means the interstate compact approved by Congress by Public Law No. 104-321,110 Stat. 3877 [cite state statute, if any].~~

~~(5) "Entity" means a person other than an individual.~~

~~(6) "Health facility" means an entity licensed under the laws of this or another state to provide health or veterinary services.~~

~~(7) "Health practitioner" means an individual who is an MD or a DO, and licensed under the laws of this or another state to provide health services.~~

~~(8) "Health services" means the provision of treatment, care, advice or guidance, or other services, or supplies, related to the health or death of individuals or human populations, to the extent necessary to respond to an emergency, including:~~

~~(A) the following, concerning the physical or mental condition or functional status of an individual or affecting the structure or function of the body:~~

~~(i) preventive, diagnostic, therapeutic, rehabilitative, maintenance, or palliative care; and~~

~~(ii) counseling, assessment, procedures, or other services;~~

~~(B) sale or dispensing of a drug, a device, equipment, or another item to an individual in accordance with a prescription; and~~

~~(C) funeral, cremation, cemetery, or other mortuary services.~~

~~(9) "Host entity" means an entity operating in this state which uses volunteer health practitioners to respond to an emergency.~~

~~(10) "License" means authorization by a state to engage in health or veterinary services that are unlawful without the authorization. The term includes authorization under the laws of this state to an individual to provide health or veterinary services based upon a national certification issued by a public or private entity.~~

~~(11) "Person" means an individual, corporation, business trust, trust, partnership, limited liability company, association, joint venture, public corporation, government or governmental subdivision, agency, or instrumentality, or any other legal or commercial entity.~~

~~(12) "Scope of practice" means the extent of the authorization to provide health granted to a health practitioner by a license issued to the practitioner in the state in which the principal part of the practitioner's services are rendered, including any conditions imposed by the licensing authority.~~

~~(13) "State" means a state of the United States, the District of Columbia, Puerto Rico, the United States Virgin Islands, or any territory or insular possession subject to the jurisdiction of the United States.~~

~~(14) "Volunteer health practitioner" means a health practitioner who provides, whether or not the practitioner receives compensation for those services. The term does not include a practitioner who receives compensation pursuant to a preexisting employment relationship with a host entity or affiliate which requires the practitioner to provide health services in this state, unless the practitioner is not a resident of this state and is employed by a disaster relief organization providing services in this state while an emergency declaration is in effect.~~

~~Legislative Note: Definition of "emergency": The terms "emergency," "disaster," and "public health emergency" are the most commonly used terms to describe the circumstances that may lead to the issuance of an emergency declaration referred to in this [act]. States that use other terminology should insert the appropriate terminology into the first set of brackets. The second set of brackets should contain references to the specific statutes pursuant to which emergencies are declared by the state or political subdivisions, municipalities, or local governments within the state.~~

~~Definition of "emergency declaration": The references to declarations issued by political subdivisions, municipalities or local governments should be used in states in which these entities are authorized to issue emergency declarations.~~

~~Definition of "state": A state may expand the reach of this [act] by defining this term to include a foreign country, political subdivision of a foreign country, or Indian tribe or nation.~~

~~SECTION 3. APPLICABILITY TO VOLUNTEER HEALTH PRACTITIONERS. This [act] applies to volunteer health practitioners registered with a registration system that complies with Section 5 and who provide health in this state for a host entity while an emergency declaration is in effect.~~

~~SECTION 4. REGULATION OF SERVICES DURING EMERGENCY.~~

~~(a) While an emergency declaration is in effect, [name of appropriate governmental agency or agencies] may limit, restrict, or otherwise regulate:~~

~~(1) the duration of practice by volunteer health practitioners;~~

~~(2) the geographical areas in which volunteer health practitioners may practice;~~

~~(3) the types of volunteer health practitioners who may practice; and~~

~~(4) any other matters necessary to coordinate effectively the provision of health or veterinary services during the emergency.~~

~~(b) An order issued pursuant to subsection (a) may take effect immediately, without prior notice or comment, and is not a rule within the meaning of [state administrative procedures act].~~

~~(c) A host entity that uses volunteer health practitioners to provide health services in this state shall:~~

~~(1) consult and coordinate its activities with [name of the appropriate governmental agency or agencies] to the extent practicable to provide for the efficient and effective use of volunteer health practitioners; and~~

~~(2) comply with any laws other than this [act] relating to the management of emergency health, including [cite appropriate laws of this state].~~

~~SECTION 5. VOLUNTEER HEALTH PRACTITIONER REGISTRATION SYSTEMS.~~

~~(a) To qualify as a volunteer health practitioner registration system, a system must:~~

~~(1) accept applications for the registration of volunteer health practitioners before or during an emergency;~~

~~(2) include information about the licensure and good standing of health practitioners which is accessible by authorized persons; and~~

~~(3) meet one of the following conditions:~~

~~(A) be an emergency system for advance registration of volunteer health-care practitioners established by a state and funded through the Health Resources Services Administration under Section 319I of the Public Health Services Act, 42 USC Section 247d-7b [as amended];~~

~~(B) be a local unit consisting of trained and equipped emergency response, public health, and medical personnel formed pursuant to Section 2801 of the Public Health Services Act, 42 U.S.C. Section 300hh [as amended];~~

~~(C) be operated by a:~~

~~(i) disaster relief organization;~~

~~(ii) licensing board;~~

~~(iii) national or regional association of licensing boards or health practitioners;~~

~~(iv) health facility that provides comprehensive inpatient and outpatient health-care services, including a tertiary care and teaching hospital; or~~

~~(v) governmental entity; or~~

~~(D) be designated by [name of appropriate agency or agencies] as a registration system for purposes of this [act].~~

~~(b) While an emergency declaration is in effect, [name of appropriate agency or agencies], a person authorized to act on behalf of [name of governmental agency or agencies], or a host entity, may confirm whether volunteer health practitioners utilized in this state are registered with a registration system that complies with subsection (a). Confirmation is limited to obtaining identities of the practitioners from the system and determining whether the system indicates that the practitioners are licensed and in good standing.~~

~~(c) Upon request of a person in this state authorized under subsection (c), or a similarly authorized person in another state, a registration system located in this state shall notify the person of the identities of volunteer health practitioners and whether the practitioners are licensed and in good standing.~~

~~(d) A host entity is not required to use the services of a volunteer health practitioner even if the practitioner is registered with a registration system that indicates that the practitioner is licensed and in good standing.~~

~~Legislative Note: If this state uses a term other than "hospital" to describe a facility with similar functions, such as an "acute care facility", the final phrase of subsection (b)(4) should include a reference to this type of facility – for example, "including a tertiary care, teaching hospital, or acute care facility."~~

~~SECTION 6. RECOGNITION OF VOLUNTEER HEALTH PRACTITIONERS LICENSED IN OTHER STATES.~~

~~(a) While an emergency declaration is in effect, a volunteer health practitioner, registered with a registration system that complies with Section 5 and licensed and in good standing in the state upon which the practitioner's registration is based, may practice in this state to the extent authorized by this [act] as if the practitioner were licensed in this state.~~

~~(b) A volunteer health practitioner qualified under subsection (a) is not entitled to the protections of this [act] if the practitioner is licensed in more than one state and any license of the practitioner is suspended, revoked, or subject to an agency order limiting or restricting practice privileges, or has been voluntarily terminated under threat of sanction.~~

~~SECTION 7. NO EFFECT ON CREDENTIALING AND PRIVILEGING.~~

~~(a) In this section:~~

~~(1) "Credentialing" means obtaining, verifying, and assessing the qualifications of a health practitioner to provide treatment, care, or services in or for a health facility based upon a unified national standard.~~

~~(2) "Privileging" means the authorizing by an appropriate authority, such as a governing body, of a health practitioner to provide specific treatment, care, or services at a health facility subject to limits based on factors that include license, education, training, experience, competence, health status, and specialized skill.~~

~~(b) This [act] does not affect credentialing or privileging standards of a health facility and does not preclude a health facility from waiving or modifying those standards while an emergency declaration is in effect.~~

~~SECTION 8. PROVISION OF VOLUNTEER HEALTH OR VETERINARY SERVICES; ADMINISTRATIVE SANCTIONS.~~

~~(a) Subject to subsections (b) and (c), a volunteer health practitioner shall adhere to the scope of practice for a similarly licensed practitioner established by the licensing provisions, practice acts, or other laws of this state.~~

~~(b) Except as otherwise provided in subsection (c), this [act] does not authorize a volunteer health practitioner to provide services that are outside the practitioner's scope of practice, even if a similarly licensed practitioner in this state would be permitted to provide the services.~~

~~(c) [Name of appropriate governmental agency or agencies] may modify or restrict the health or veterinary services that volunteer health practitioners~~

~~may provide pursuant to this [act]. An order under this subsection may take effect immediately, without prior notice or comment, and is not a rule within the meaning of [state administrative procedures act].~~

~~(d) A host entity may restrict the health or veterinary services that a volunteer health practitioner may provide pursuant to this [act].~~

~~(e) A volunteer health practitioner does not engage in unauthorized practice unless the practitioner has reason to know of any limitation, modification, or restriction under this section or that a similarly licensed practitioner in this state would not be permitted to provide the services. A volunteer health practitioner has reason to know of a limitation, modification, or restriction or that a similarly licensed practitioner in this state would not be permitted to provide a service if:~~

~~(1) the practitioner knows the limitation, modification, or restriction exists or that a similarly licensed practitioner in this state would not be permitted to provide the service; or~~

~~(2) from all the facts and circumstances known to the practitioner at the relevant time, a reasonable person would conclude that the limitation, modification, or restriction exists or that a similarly licensed practitioner in this state would not be permitted to provide the service.~~

~~(f) In addition to the authority granted by law of this state other than this [act] to regulate the conduct of health practitioners, a licensing board or other disciplinary authority in this state:~~

~~(1) may impose administrative sanctions upon a health practitioner licensed in this state for conduct outside of this state in response to an out-of-state emergency;~~

~~(2) may impose administrative sanctions upon a practitioner not licensed in this state for conduct in this state in response to an in-state emergency; and~~

~~(3) shall report any administrative sanctions imposed upon a practitioner licensed in another state to the appropriate licensing board or other disciplinary authority in any other state in which the practitioner is known to be licensed.~~

~~(g) In determining whether to impose administrative sanctions under subsection (f), a licensing board or other disciplinary authority shall consider the circumstances in which the conduct took place, including any exigent circumstances, and the practitioner's scope of practice, education, training, experience, and specialized skill.~~

~~Legislative Note: The governmental agency or agencies referenced in subsection (c) may, as appropriate, be a state licensing board or boards rather than an agency or agencies that deal[s] with emergency response efforts.~~

~~SECTION 9. RELATION TO OTHER LAWS.~~

~~(a) This [act] does not limit rights, privileges, or immunities provided to volunteer health practitioners by laws other than this [act]. Except as otherwise provided in subsection (b), this [act] does not affect requirements~~

~~for the use of health practitioners pursuant to the Emergency Management Assistance Compact.~~

~~(b) [Name of appropriate governmental agency or agencies], pursuant to the Emergency Management Assistance Compact, may incorporate into the emergency forces of this state volunteer health practitioners who are not officers or employees of this state, a political subdivision of this state, or a municipality or other local government within this state.~~

~~Legislative Note: References to other emergency assistance compacts to which the state is a party should be added.~~

~~SECTION 10. REGULATORY AUTHORITY.~~

~~[Name of appropriate governmental agency or agencies] may promulgate rules to implement this [act]. In doing so, [name of appropriate governmental agency or agencies] shall consult with and consider the recommendations of the entity established to coordinate the implementation of the Emergency Management Assistance Compact and shall also consult with and consider rules promulgated by similarly empowered agencies in other states to promote uniformity of application of this [act] and make the emergency response systems in the various states reasonably compatible.~~

~~Legislative Note: References to other emergency assistance compacts to which the state is a party should be added.~~

~~SECTION 11. CIVIL LIABILITY FOR VOLUNTEER HEALTH PRACTITIONERS; VICARIOUS LIABILITY.~~

~~Civil liability should be limited to those instances where both malicious intent is demonstrated, and the plaintiff has met a clear and convincing standard for the burden of proof.~~

~~SECTION 11. LIMITATIONS ON CIVIL LIABILITY FOR VOLUNTEER HEALTH PRACTITIONERS[; VICARIOUS LIABILITY].~~

~~ALTERNATIVE A~~

~~(A) SUBJECT TO SUBSECTION (C), A VOLUNTEER HEALTH PRACTITIONER WHO PROVIDES HEALTH OR VETERINARY SERVICES PURSUANT TO THIS [ACT] IS NOT LIABLE FOR DAMAGES FOR AN ACT OR OMISSION OF THE PRACTITIONER IN PROVIDING THOSE SERVICES.~~

~~(B) NO PERSON IS VICARIOUSLY LIABLE FOR DAMAGES FOR AN ACT OR OMISSION OF A VOLUNTEER HEALTH PRACTITIONER IF THE PRACTITIONER IS NOT LIABLE FOR THE DAMAGES UNDER SUBSECTION (A).~~

~~(C) THIS SECTION DOES NOT LIMIT THE LIABILITY OF A VOLUNTEER HEALTH PRACTITIONER FOR:~~

~~(1) WILLFUL MISCONDUCT OR WANTON, GROSSLY NEGLIGENT, RECKLESS, OR CRIMINAL CONDUCT;~~

~~(2) AN INTENTIONAL TORT;~~

~~(3) BREACH OF CONTRACT;~~

~~(4) A CLAIM ASSERTED BY A HOST ENTITY OR BY AN ENTITY LOCATED IN THIS OR ANOTHER STATE WHICH EMPLOYS OR USES THE SERVICES OF THE PRACTITIONER; OR~~

~~(5) AN ACT OR OMISSION RELATING TO THE OPERATION OF A~~

~~MOTOR VEHICLE, VESSEL, AIRCRAFT, OR OTHER VEHICLE.~~

~~(D) A PERSON THAT, PURSUANT TO THIS [ACT], OPERATES, USES, OR RELIES UPON INFORMATION PROVIDED BY A VOLUNTEER HEALTH PRACTITIONER REGISTRATION SYSTEM IS NOT LIABLE FOR DAMAGES FOR AN ACT OR OMISSION RELATING TO THAT OPERATION, USE, OR RELIANCE UNLESS THE ACT OR OMISSION IS AN INTENTIONAL TORT OR IS WILLFUL MISCONDUCT OR WANTON, GROSSLY NEGLIGENT, RECKLESS, OR CRIMINAL CONDUCT.~~

~~[(E) IN ADDITION TO THE PROTECTIONS PROVIDED IN SUBSECTION (A), A VOLUNTEER HEALTH PRACTITIONER WHO PROVIDES HEALTH OR VETERINARY SERVICES PURSUANT TO THIS [ACT] IS ENTITLED TO ALL THE RIGHTS, PRIVILEGES, OR IMMUNITIES PROVIDED BY [CITE STATE LAW.]]~~

~~ALTERNATIVE B~~

~~(A) SUBJECT TO SUBSECTION (B), A VOLUNTEER HEALTH PRACTITIONER WHO RECEIVES COMPENSATION OF [$500] OR LESS PER YEAR FOR PROVIDING HEALTH OR VETERINARY SERVICES PURSUANT TO THIS [ACT] IS NOT LIABLE FOR DAMAGES FOR AN ACT OR OMISSION OF THE PRACTITIONER IN PROVIDING THOSE SERVICES. REIMBURSEMENT OF, OR ALLOWANCE FOR, REASONABLE EXPENSES, OR CONTINUATION OF SALARY OR OTHER REMUNERATION WHILE ON LEAVE, IS NOT COMPENSATION UNDER THIS SUBSECTION.~~

~~(B) THIS SECTION DOES NOT LIMIT THE LIABILITY OF A VOLUNTEER HEALTH PRACTITIONER FOR:~~

~~(1) WILLFUL MISCONDUCT OR WANTON, GROSSLY NEGLIGENT, RECKLESS, OR CRIMINAL CONDUCT;~~

~~(2) AN INTENTIONAL TORT;~~

~~(3) BREACH OF CONTRACT;~~

~~(4) A CLAIM ASSERTED BY A HOST ENTITY OR BY AN ENTITY LOCATED IN THIS OR ANOTHER STATE WHICH EMPLOYS OR USES THE SERVICES OF THE PRACTITIONER; OR~~

~~(5) AN ACT OR OMISSION RELATING TO THE OPERATION OF A MOTOR VEHICLE, VESSEL, AIRCRAFT, OR OTHER VEHICLE.~~

~~(C) A PERSON THAT, PURSUANT TO THIS [ACT], OPERATES, USES, OR RELIES UPON INFORMATION PROVIDED BY A VOLUNTEER HEALTH PRACTITIONER REGISTRATION SYSTEM IS NOT LIABLE FOR DAMAGES FOR AN ACT OR OMISSION RELATING TO THAT OPERATION, USE, OR RELIANCE UNLESS THE ACT OR OMISSION IS AN INTENTIONAL TORT OR IS WILLFUL MISCONDUCT OR WANTON, GROSSLY NEGLIGENT, RECKLESS, OR CRIMINAL CONDUCT.~~

~~[(D) IN ADDITION TO THE PROTECTIONS PROVIDED IN SUBSECTION (A), A VOLUNTEER HEALTH PRACTITIONER WHO PROVIDES HEALTH OR VETERINARY SERVICES PURSUANT TO THIS [ACT] IS ENTITLED TO ALL THE RIGHTS, PRIVILEGES, OR IMMUNITIES PROVIDED BY [CITE STATE LAW].]~~

~~SECTION 12. WORKERS' COMPENSATION COVERAGE.~~

~~(A) IN THIS SECTION, "INJURY" MEANS A PHYSICAL OR MENTAL INJURY OR DISEASE FOR WHICH AN EMPLOYEE OF THIS STATE WHO IS INJURED OR CONTRACTS THE DISEASE IN THE COURSE OF THE EMPLOYEE'S EMPLOYMENT WOULD BE ENTITLED TO BENEFITS UNDER THE WORKERS' COMPENSATION [OR OCCUPATIONAL DISEASE] LAW OF THIS STATE.~~

~~(B) A VOLUNTEER HEALTH PRACTITIONER WHO DIES OR IS INJURED AS THE RESULT OF PROVIDING HEALTH OR VETERINARY SERVICES PURSUANT TO THIS [ACT] IS DEEMED TO BE AN EMPLOYEE OF THIS STATE FOR THE PURPOSE OF RECEIVING BENEFITS FOR THE DEATH OR INJURY UNDER THE WORKERS' COMPENSATION [OR OCCUPATIONAL DISEASE] LAW OF THIS STATE IF:~~

~~(1) THE PRACTITIONER IS NOT OTHERWISE ELIGIBLE FOR SUCH BENEFITS FOR THE INJURY OR DEATH UNDER THE LAW OF THIS OR ANOTHER STATE; AND~~

~~(2) THE PRACTITIONER, OR IN THE CASE OF DEATH THE PRACTITIONER'S PERSONAL REPRESENTATIVE, ELECTS COVERAGE UNDER THE WORKERS' COMPENSATION [OR OCCUPATIONAL DISEASE] LAW OF THIS STATE BY MAKING A CLAIM UNDER THAT LAW.~~

~~(C) THE [NAME OF APPROPRIATE GOVERNMENTAL AGENCY] SHALL ADOPT RULES, ENTER INTO AGREEMENTS WITH OTHER STATES, OR TAKE OTHER MEASURES TO FACILITATE THE RECEIPT OF BENEFITS FOR INJURY OR DEATH UNDER THE WORKERS' COMPENSATION [OR OCCUPATIONAL DISEASE] LAW OF THIS STATE BY VOLUNTEER HEALTH PRACTITIONERS WHO RESIDE IN OTHER STATES, AND MAY WAIVE OR MODIFY REQUIREMENTS FOR FILING, PROCESSING, AND PAYING CLAIMS THAT UNREASONABLY BURDEN THE PRACTITIONERS. TO PROMOTE UNIFORMITY OF APPLICATION OF THIS [ACT] WITH OTHER STATES THAT ENACT SIMILAR LEGISLATION, THE [NAME OF APPROPRIATE GOVERNMENTAL AGENCY] SHALL CONSULT WITH AND CONSIDER THE PRACTICES FOR FILING, PROCESSING, AND PAYING CLAIMS BY AGENCIES WITH SIMILAR AUTHORITY IN OTHER STATES.~~

~~LEGISLATIVE NOTES: THE BRACKETED TERM "OCCUPATIONAL DISEASE" SHOULD NOT BE USED IN STATES THAT DO NOT HAVE SPECIFIC OCCUPATIONAL DISEASE LAWS.~~

~~STATES SHOULD REVIEW THEIR WORKERS' COMPENSATION AND OCCUPATIONAL DISEASE LAWS TO DETERMINE WHETHER THEY HAVE APPROPRIATE PROVISIONS FOR PROVIDING WAGE LOSS BENEFITS TO VOLUNTEER HEALTH PRACTITIONERS. IF NECESSARY, AN ADDITIONAL SUBSECTION CROSS REFERENCING SPECIAL PROVISIONS INCLUDED IN WORKERS' COMPENSATION LAWS FOR CALCULATING WAGE-LOSS BENEFITS FOR VOLUNTEERS, OR DESIGNATING HOW WAGE LOSS BENEFITS FOR VOLUNTEERS WILL BE DETERMINED, SHOULD BE ADDED TO THIS SECTION.~~

~~STATES SHOULD ALSO REVIEW THEIR WORKERS' COMPENSATION AND OCCUPATIONAL DISEASE LAWS TO DETERMINE WHETHER CURRENT LAWS MAY PROVIDE MORE EXPANSIVE BENEFITS TO VOLUNTEERS THAN ARE OTHERWISE PROVIDED BY THIS ACT, SUCH AS BENEFITS FOR INJURIES OR DEATHS OCCURRING DURING DISASTER TRAINING OR DRILLS. IF CURRENT STATE LAWS PROVIDE MORE EXPANSIVE BENEFITS AND STATES WISH TO EXTEND SUCH BENEFITS TO VOLUNTEER HEALTH PRACTITIONERS UNDER THIS ACT, A PROVISION SHOULD BE ADDED TO THIS SECTION CONFORMING THE SCOPE OF BENEFITS AVAILABLE UNDER THIS ACT TO THOSE AVAILABLE UNDER THE OTHER LAWS.~~

~~**THIS SECTION DEFERS TO OTHER PROVISIONS OF STATE LAW TO DETERMINE WHETHER AND TO WHAT EXTENT THE OPTION TO ELECT WORKERS' COMPENSATION OR OCCUPATIONAL DISEASE BENEFITS CONSTITUTES THE EXCLUSIVE REMEDY AGAINST THE STATE FOR INJURIES OR DEATH THAT OCCURS WHEN ACTING AS A VOLUNTEER HEALTH PRACTITIONER IN THE STATE. IF EXISTING STATE LAWS DO NOT ADEQUATELY ADDRESS THIS TOPIC, STATES SHOULD CONSIDER WHETHER APPROPRIATE LANGUAGE CLARIFYING WHETHER AND TO WHAT EXTENT THESE BENEFITS CONSTITUTE AN EXCLUSIVE REMEDY SHOULD BE ADDED TO THIS SECTION.**~~

~~**SECTION 13. UNIFORMITY OF APPLICATION AND CONSTRUCTION. IN APPLYING AND CONSTRUING THIS UNIFORM ACT, CONSIDERATION MUST BE GIVEN TO THE NEED TO PROMOTE UNIFORMITY OF THE LAW WITH RESPECT TO ITS SUBJECT MATTER AMONG STATES THAT ENACT IT.**~~

~~**SECTION 14. REPEALS. THE FOLLOWING ACTS AND PARTS OF ACTS ARE REPEALED:**~~
~~**(1) .....**~~
~~**(2) .....**~~

~~**SECTION 15. EFFECTIVE DATE. THIS [ACT] TAKES EFFECT . . . .**~~

SUBJECT: TIMELY POSTING OF MEETING AGENDAS/MATERIALS AND APPROVAL OF MEETING MINUTES – SOURCE: H351-A/18

SUBMITTED BY: Committee on AOA Governance and Organizational Structure

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is scheduled for sunset review; and

WHEREAS, the Committee on AOA Governance and Organizational Structure has reviewed the policy; now, therefore be it

RESOLVED, that the Committee on AOA Governance and Organizational Structure recommends that the following policy be REAFFIRMED.

Agendas and meeting materials for American Osteopathic Association (AOA) meetings will be sent to committee members and posted to a dedicated webpage on the AOA website at least ten (10) business days prior to the respective meeting. The minutes from AOA meetings will be submitted to the respective committee members for review and comment no later than ten (10) business days following the conclusion of the meeting. Committee members shall then review and provide feedback for AOA staff to incorporate and submit to the committee chair and/or vice chair within ten (10) business days. The committee chair and/or vice chair shall then have ten (10) business days to review and approve any revisions.

AOA staff shall then distribute revised minutes to committee members within ten (10) business days of their approval by the committee chair and/or vice chair, and then they shall be posted to a dedicated website accessible to members no later than ten (10) business days following final approval.

Meeting materials containing sensitive or confidential information may be redacted with the authorization of the appropriate bureau or committee chair and AOA legal counsel prior to being placed on the public website but shall never be redacted in the official minutes of record. No bureau or committee recommendations may be considered by any other AOA body until the minutes of the meeting have been finally approved. Note: “appropriate members” will be defined as members of the bureau, committee or board at the time the meeting was held; and that AOA staff leadership be held accountable by the AOA Board of Trustees for immediately, appropriately and consistently implementing this policy to promote organizational transparency and protect AOA volunteers in the performance of their fiduciary duties.

SUBJECT: SUNSET RESOLUTIONS – SOURCE: H364-A/18

SUBMITTED BY: Committee on AOA Governance and Organizational Structure

REFERRED TO: Committee on Professional Affairs

WHEREAS, this policy is scheduled for sunset review; and

WHEREAS, the Committee on AOA Governance and Organizational Structure (CAGOS) has reviewed the policy; and

WHEREAS, CAGOS has provided modifications to ensure the policy reads correctly; now, therefore be it

RESOLVED, that the Committee on AOA Governance and Organizational Structure recommends that the following policy be REAFFIRMED AS AMENDED.

~~The American Osteopathic Association supports that when a sunsetting resolution is presented for review and is recommended for Disapproval, the submitting organization must offer a thorough explanatory statement as to the reason this recommendation is offered; and that the substitution of another resolution that is sunsetting the same year, that the current numbered resolution must be presented as opposed to the expiring year resolution; and that when a Sunsetting resolution is presented for review and recommended for disapproval based on the substitution of another resolution that has been enacted in another year and is not sunsetting, that the more current resolution and policy must be presented for easier review to make certain that the intent and policy are indeed being covered; and when there are recommendations made to alter or enhance, other than for spelling, grammar and clarification and all else of what would be considered "editorial", a resolution that is due for sunsetting and is being presented for approval, that a significant explanatory statement must be presented.~~

THE AMERICAN OSTEOPATHIC ASSOCIATION REVIEWS POLICY EVERY FIVE YEARS TO EITHER REAFFIRM, REAFFIRM WITH AMENDMENTS OR SUNSET THE POLICY. A THOROUGH EXPLANATORY STATEMENT AS TO THE REASON SUPPORTING THE DECISION SHOULD BE PROVIDED. POLICIES UNDER SUNSET REVIEW WILL RECEIVE A NEW RESOLUTION NUMBER PERTINENT TO THE YEAR OF REVIEW. IF APPROVED BY THE HOUSE OF DELEGATES, THE RESOLUTION NUMBER PROVIDED DURING THE YEAR OF REVIEW WILL BECOME THE NEW POLICY NUMBER. THE SOURCE CODE LISTED WITHIN THE TITLE WILL REFLECT THE CURRENT POLICY NUMBER UNDER REVIEW.

ACTION TAKEN: __Adopted as Amended__

DATE: ____July 22, 2023_____

SUBJECT: WORKPLACE VIOLENCE AGAINST HEALTHCARE PROVIDERS

SUBMITTED BY: Maryland Association of Osteopathic Physicians

REFERRED TO: Committee on Professional Affairs

WHEREAS, the definition of workplace violence as defined by the Occupational Safety and Health Administration (OSHA) is “any act or threat of physical violence, harassment, intimidation, or other threatening disruptive behavior that occurs at the work site;”[1] and

WHEREAS, the incidence of violence against healthcare workers has increased exponentially over the last five years, and further escalated in the era of the COVID pandemic[2],[3],[4],[5],[6],[7]; and

WHEREAS, there is correlation between decrease in physician and healthcare worker wellbeing (in the form of burn out, leaving one’s job, mental and physical decompensation) and an increase of the incidence of violence in the healthcare setting[8],[9],[10]; and

WHEREAS, the Joint Commission has published standards for hospitals for response to violence on healthcare workers[11],[12],[13]; and

WHEREAS, there remains an incomplete, disunited, and vague response to violence against physicians and other healthcare workers from healthcare systems, law enforcement, professional associations and politicians;[14] and

WHEREAS, our American Osteopathic Association (AOA) represents more than 168,000 osteopathic medical professionals across the United States by "advocating at the state and federal levels on issues that affect DOs and osteopathic medical students;"[15] and

WHEREAS, there is not unified language or policy in regards to a criminal response to workplace violence across the various States where osteopathic physicians practice; and

WHEREAS, "some States raise the offense from simple assault to aggravated assault depending on specific classes of persons (teachers or school employees, park district employees, police officers, and persons over age 60 according to some laws), and in some cases have upgraded assault charges from misdemeanor to felonies;"[16] and

WHEREAS, there is a precedent set of felonious charges against those who commit acts of violence against police officers and other public servants[17]; now therefore be it

RESOLVED, that ~~our~~ **THE** AOA ~~will formally adopt~~ **RE**~~-~~**AFFIRMS** the position that acts of violence against ~~healthcare workers~~ **PHYSICIANS,** ~~**AND THEIR**~~ **LEARNERS, STAFF AND HEALTHCARE WORKERS** should be prosecuted criminally as a felony across all states, territories, provinces, where osteopathic physicians practice; and be it further

RESOLVED, that ~~our~~ **THE** AOA ~~will~~ ~~not only~~ ~~**NOT ONLY**~~ support**S** ~~current~~ ~~**CURRENT**~~ legislation in line with the position that acts of violence against ~~healthcare workers~~ **PHYSICIANS,** ~~**AND THEIR**~~ **LEARNERS, STAFF AND HEALTHCARE WORKERS** should be prosecuted criminally as a felony across all **JURISDICTIONS** ~~states, territories, provinces~~, where osteopathic physicians practice, ~~but~~ ~~**ALSO WILL SUPPORT EFFORTS MADE**~~ ~~will actively lobby at the state and/or federal level for the adoption of uniform policy across all states where osteopathic physicians practice~~; and be it further

~~RESOLVED, that our AOA form a task force with a specific duty to create rhetoric and legislation to be lobbied at the state and/or federal level in support of the position that acts of violence against healthcare workers~~

~~should be prosecuted criminally as a felony across all states, territories, provinces, where osteopathic physicians practice, for the pursuit of increased protection of healthcare workers; and be it further~~

RESOLVED, that ~~our~~ **THE** AOA will ~~actively reduce~~ **OPPOSE** stigma**TIZING PHYSICIANS, ~~AND THEIR~~ LEARNERS, STAFF** ~~against~~ **AND ~~OTHER~~ HEALTHCARE WORKERS** ~~healthcare workers from~~ **WHO** speak~~ing~~ out against workplace violence in the healthcare environment ; and be it further

RESOLVED, that ~~our~~ **THE** AOA ~~**pledge**~~ **ACKNOWLEDGE** that the threat against physician well being, in the form of workplace violence, is a threat against the healthcare system, and therefore society as a whole.

Background Information: Provided by AOA Staff

Current AOA Policy: H324-A/20 Violence Against Healthcare Staff

AOA policy supports legislation to hold patients and their associates accountable for physical assault and verbal threats to health care staff by upgrading penalties under federal and relevant state law and legislation from misdemeanors to felonies where applicable.

For several Congresses, the AOA Public Policy team has been and continues to be active on this issue. The AOA's support and advocacy were instrumental in the passage of the Workplace Violence Prevention for Health Care and Social Service Workers Act in the House of Representatives last Congress.

After its House passage, the AOA led the effort in partnering with 44 osteopathic state and specialty affiliates on a letter encouraging Senate leadership to take similar action.

Prior HOD action on similar or same topic: None

FISCAL IMPACT: ~~$160,000 Annual Expense~~

~~The fiscal impact includes the hiring of a full-time employee for state and federal to "actively lobby" for this issue as well as the creation of a task force.~~

ACTION TAKEN __Adopted as Amended__

DATE ____July 22, 2023_____

SUBJECT: ~~AOA SUPPORT FOR THE FAIR ACCESS IN RESIDENCY (FAIR) ACT, H.R. 751~~ **AOA SUPPORT FOR GME EQUITY**

SUBMITTED BY: Virginia Osteopathic Medical Association

REFERRED TO: Committee on Professional Affairs

WHEREAS, Osteopathic medicine is the fastest growing field in the US, representing more than 11% of US physicians, and Colleges of Osteopathic Medicine currently educate more than 35,000 physicians, 25% of all US medical students[1]; and

WHEREAS, The Comprehensive Osteopathic Medical Licensing Examination of the United States (COMLEX-USA) is the licensing exam series required by the Commission on Osteopathic College Accreditation (COCA) to be taken by all osteopathic (DO) medical students in order to graduate from COCA-accredited medical schools[2]; and

WHEREAS, The United States Medical Licensing Examination (USMLE) is the licensing exam series taken by all allopathic (MD) medical students[3]; and

WHEREAS, The COMLEX-USA and USMLE are equivalent medical licensing exams, supported by published predictive validity and score concordance studies[4]; and

WHEREAS From 2015 to 2020, residency training was consolidated under a single accreditor, the Accreditation Council for Graduate Medical Education (ACGME) for all US residency and fellowship programs[5]; and

WHEREAS The percentage of DOs matching to their preferred surgical specialties has declined since single accreditation[6]; and

WHEREAS, According to the 2022 National Residency Matching Program survey, 32% of Residency Program Directors reported never (7%) or seldom (25%) interviewing DO seniors[7]; and

WHEREAS, For residency programs that do interview DOs, 56% require the USMLE[7]; and

WHEREAS, ACGME does not specify the licensing exams that residency applicants must take to be eligible for appointment in ACGME-accredited residency programs [8]; and

WHEREAS, In 2020 it was reported that approximately 60% of osteopathic medical students took at least one portion of the USMLE[9]; and

WHEREAS, DO students who take the USMLE spend an additional $2,235 in exam fees and 32 hours of exam time per student[10]; and

WHEREAS, Licensing examinations increase rates of stress, anxiety and depression among medical students, placing significant hardships on DO students who complete both the COMLEX-USA and USMLE[11]; and

WHEREAS, These exclusionary and burdensome requirements on DOs impact specialty choices of osteopathic medical students and exacerbate physician workforce shortages, particularly in rural and underserved communities; and

WHEREAS, Medicare accounts for 71% of Graduate Medical Education (GME) funding totaling over $10 billion annually[12]; and

WHEREAS, The Fair Access In Residency (FAIR) Act, H.R. 751, requires Medicare-funded GME programs, as a condition for participation, to report annually the number of residency applicants and acceptances from osteopathic and allopathic medical schools[13]; and

WHEREAS, The FAIR Act requires residency programs to affirm annually that they accept applications from osteopathic and allopathic medical schools, and that if an examination score is required for acceptance, the COMLEX-USA and USMLE will be ~~equally~~ **EQUITABLY** accepted[13]; and

WHEREAS, The FAIR Act [13] aims to reduce barriers and promote equality of opportunity for DO students and ensure that the nation is leveraging all available physicians to support access to healthcare; now, therefore be it

RESOLVED, THAT THE AOA SUPPORTS NON-LEGISLATIVE, PROPERLY VETTED LEGISLATIVE AND REGULATORY AND OTHER PUBLIC POLICY SOLUTIONS THAT ASSURE GME EQUITY FOR OSTEOPATHIC MEDICAL STUDENTS AND ALSO ASSURE UNIVERSAL ACCEPTANCE OF APPLICATIONS FROM QUALIFIED OSTEOPATHIC MEDICAL STUDENTS AND UNIVERSAL ACCEPTANCE OF COMLEX WHEN A TEST SCORE IS REQUIRED BY A GME PROGRAM; AND, BE IT FURTHER

RESOLVED THAT THE AOA BOARD OF TRUSTEES REPORT BACK SEMI-ANNUALLY TO THE MEMBERS BEGINNING WITH THE MIDYEAR MEETING ON THE PROGRESS THAT HAS BEEN MADE TO ASSURE EQUITY EXISTS FOR OSTEOPATHIC GRADUATES TO ENTER RESIDENCY PROGRAMS IN ALL FIELDS OF MEDICINE AND SURGERY.

SUBJECT: ADVOCATE CONGRESS TO CLOSE THE TITLE IV LOOPHOLE THAT HAS BEEN USED TO ENABLE FUNDS TO COVER THE COST OF ATTENDANCE AT FOR PROFIT MEDICAL SCHOOLS THAT WOULD OTHERWISE BE INELIGIBLE

SUBMITTED BY: New York State Osteopathic Medical Society

REFERRED TO: Committee on Professional Affairs

WHEREAS, there are a number of strategies used by for-profit offshore medical schools that take advantage of loopholes that are intended to address economic needs of students attending programs of higher education; and

WHEREAS, according to Chronicle of Higher Education for-profit Caribbean medical schools have been exploiting a loophole in the U.S. federal student-aid system to obtain funding for which they would not otherwise be eligible, and.

WHEREAS, some offshore medical schools encourage students to concurrently enroll in secondary, and often unnecessary, degree programs at online American universities that are approved to participate in the Title IV system and to borrow the maximum allowed amount in federal loans and to use that money to pay for both programs, and

WHEREAS, this workaround was uncovered by the Postsecondary Equity and Economics Research or (PEER) Project[i], a public-interest research group started by academics at Columbia and George Washington Universities and lawyers at the National Student Legal Defense Network[ii]; and

WHEREAS, they publish this activity in a recent report "The Hidden Loophole: How Predatory Offshore Medical Schools are Partnering with U.S. Universities to Access Federal Student Aid Funds"[iii] ; and

WHEREAS, at least 18 Caribbean medical schools and two American online providers, Franklin and Walden Universities, have been part of the concurrent-enrollment partnership, which has been around for a decade; and

WHEREAS, in the aforementioned report, it is noted that none of the students interviewed by the PEER Project had received a degree, either from the medical schools or the online universities; and

WHEREAS, Caribbean medical schools often cater to American students who are unable to gain admission to American medical schools. The schools have offices in the United States, but many do not meet eligibility requirements to participate in the Title IV federal-aid program because of poor job-placement

results and subpar passage rates on medical-licensure exams, among other factors. They are also not subject to American regulatory oversight or accreditation by the Liaison Committee on Medical Education (LCME) or the Commission on Osteopathic College Accreditation (COCA); and

WHEREAS, although the cost of attendance at Title IV-ineligible medical schools is typically less than at their eligible peer institutions — average tuition and fees at ineligible Caribbean medical schools is $109,100 — they can be costly for students who have to pay out of pocket or take out private loans; and

~~WHEREAS, students interviewed for the report informed the author, Angela Moats, that the online universities set up tables or hosted pizza lunches at the medical schools to market the program. Others were told about it by their medical-school financial-aid office; and~~

WHEREAS, many of the secondary degrees were in health-care management or administration, which are not necessary for practicing medicine, and in some cases, students were borrowing for additional bachelor's degrees; and

WHEREAS, the online programs benefited from additional students' enrolling in one or two courses a semester, while the medical schools were able to get federal-aid funds. "The Department of Education essentially helped keep them afloat,"; and

~~WHEREAS, "To be clear, concurrent enrollment was presented to students not as an academic option but for financial-aid purposes," said Libby DeBlasio Webster, co-director of the PEER Project and senior counsel at the network. Medical students approached the researchers after the network filed a federal civil-rights lawsuit against one of the online universities, Walden University; and~~

WHEREAS, Federal regulations don't explicitly forbid concurrent-enrollment plans, although it is illegal for colleges to tell prospective students that they can use federal student-aid dollars to pay tuition for a second-degree program at an ineligible institution. ~~Moats and Webster stated that they hoped the Department of Education would review Title IV regulations to close the loophole;~~ now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) work with the American Medical Association (AMA) and other interested stakeholders to advocate for congressional oversight of the misuse of Title IV funding by for-profit offshore medical schools (which would otherwise be ineligible for such funding) through any partnership, affiliation or other type of arrangement with a Title IV-eligible institution. The oversight would expressly prohibit and prevent the use of funds granted in an application to be used for any

68 purposes, including but not limited to tuition, transportation, or cost of
69 attendance at an institution not identified in the primary application.

5 amendments to provide clarity and updates to the policy, now therefore be it

6 RESOLVED, that the Bureau of Osteopathic Research and Public Health
7 recommends that the following policy be REAFFIRMED AS AMENDED.

8 The American Osteopathic Association support**S IMPLEMENTATION OF**
9 ~~development of a toolkit with templates of~~ comprehensive uniform protocols for
10 adoption by **ALL** ~~osteopathic~~ **HEALTHCARE** institutions and organizations to
11 protect patients from **SEXUAL ABUSE AND MISCONDUCT** ~~abuse; and to be~~
12 ~~implemented~~ so that suspected violations are investigated and appropriately
13 referred to legal authorities for prosecution when appropriate.

Background Information: Provided by AOA Staff
Current AOA Policy: As noted above (2018)

The AOA and other organizations are addressing this issue. In 2017, the American Academy of Osteopathy adopted a position paper on Recommended Guidelines for Pelvic Examination and Treatment. The guidelines address Informed Consent, Modesty and Comfort, Pelvic Examinations, Osteopathic Indications, and Documentation. https://www.academyofosteopathy.org/assets/docs/PelvicExaminationAndTreatment2.pdf

In May 2017, the Federation of State Medical Boards (FSMB) convened a Workgroup on Physician Sexual Misconduct. AOA Board of Trustee Member Teresa A. Hubka, DO represented the AOA on this workgroup. The Report and Recommendations of the workgroup were adopted as policy by the FSMB in May 2020. https://www.fsmb.org/siteassets/advocacy/policies/report-of-workgroup-on-sexual-misconduct-adopted-version.pdf

In January 2018, the AOA made a public statement on sexual abuse of patients related to the Larry Nassar case. AOA President Mark A. Baker, DO, sent a letter to AOA members and affiliates. The letter was also published in The DO. https://thedo.osteopathic.org/2018/01/aoa-president-mark-baker-responds-larry-nassar-case/

The AOA will continue to monitor this issue. Possible tactics to be executed but not limited to include making and disseminating public statements, supporting the position of profession-related organizations, as well as participating with AOA leadership representation in official workgroups or organized committees.

SUBJECT: HUMAN IMMUNODEFICIENCY VIRUS (HIV) TESTING – CLINICAL AND PUBLIC HEALTH APPLICATION OF - SOURCE: H-424-A/18

SUBMITTED BY: Bureau of Osteopathic Research and Public Health

REFERRED TO: Committee on Public Affairs

WHEREAS, this policy is to be reviewed for sunset; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the American College of Osteopathic Obstetricians and Gynecologists have reviewed this policy; now, therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED.

The American Osteopathic Association supports widespread application of HIV testing in the clinical setting particularly for those at risk for HIV infection as determined by physician evaluation; supports continued anonymous testing and counseling programs in public health facilities to maximize individual participation; supports mandatory HIV testing only for source patients, in cases of rape or incest, or in cases of an accidental exposure in patients who are at risk for HIV/AIDS; and supports the following recommendation of the American College of Osteopathic Obstetricians and Gynecologists.

A. Healthcare Workers

1. Healthcare workers have a minimal risk of acquiring HIV infection from patients; however, this risk is much greater than the extremely remote possibility of transmission to patients.

2. Properly used universal precautions are effective in the prevention of transmission of bodily fluids between healthcare workers and patients and diminish the risk of infection. Serologic testing of patients and/or healthcare workers for the purposes of infection control does not prevent the transmission of HIV infection nor enhance the effectiveness of universal precautions. The AOA supports and encourages patients who know they are HIV positive to inform their physician that they are HIV positive prior to receiving medical care.

3. The AOA opposes mandatory testing of patients and healthcare workers as there is no scientific data supporting the efficacy of such testing in the prevention of HIV transmission in the healthcare setting. Should any state or the federal government legislate mandatory HIV testing for any group, the AOA is opposed to any such legislation which does not include the entire population because such legislation

discriminates against certain groups. The AOA affirms the right of HIV-infected individuals to practice their occupations in a manner which does not present any identifiable risk of transmission of disease and pledges itself to promote the ability of these individuals to continue productive careers so long as they can do so responsibly and safely.

4. The AOA supports programs for effective education and implementation of universal precautions in all healthcare settings.

B. Public and Patient Education

1. Although studies have demonstrated an improved awareness of HIV infection and its modes of transmission, myths and misconceptions persist.

2. The AOA supports public education programs that provide accurate, up-to-date and clearly stated information regarding HIV transmission. The AOA urges increased governmental appropriations for implementing public health measures to assist in halting the increasing incidence of HIV and AIDS.

3. Primary care physicians occupy a central role in education of patients regarding preventative healthcare in general and are in an ideal position to serve a central role in HIV prevention.

4. The AOA encourages all osteopathic physicians to be knowledgeable in HIV risk evaluations and to incorporate candid and nonjudgmental assessment of related risk behaviors in routine patient care.

C. Medical Education

1. Osteopathic medical students and physicians in training are particularly vulnerable to the socioeconomic consequences of occupationally acquired HIV infection. The osteopathic profession bears a unique responsibility to provide for their maximum protection and social wellbeing.

All osteopathic medical schools and postdoctoral training programs should make available: life, health and disability insurance including coverage for occupationally acquired HIV infection; effective education and training in AIDS, infection control and universal precautions. 1991; revised 1992; reaffirmed 1997, revised 2003; reaffirmed 2013

REFERRED TO: Committee on Public Affairs

WHEREAS, in 2022 the AOA House of Delegates referred Sunset Res. No. H-424-A/2022 Policy Statement on End of Life Care to the Bureau on Osteopathic Research and Public Health; now, therefore be it;

RESOLVED, that the white paper titled End of Life Care Policy Statement be reaffirmed as amended.

The American Osteopathic Association approves the white paper on end of life care and

- encourages all osteopathic physicians to **BE FAMILIAR WITH** ~~maintain competency in~~ end of life care ~~through educational programs such as the web-based osteopathic Education for Professionals on End of Life Care (Osteopathic EPEC) modules;~~
- supports the development, distribution and implementation of comprehensive curricula to train medical students, interns, residents and physicians in end of life issues;
- urges osteopathic medical schools, and appropriate training programs to support innovative approaches to instruction in geriatric medicine and end of life care;
- encourages all osteopathic physicians to stay current with their individual state statutes on end of life care;
- supports public policies which upholds a patient's right to a "Do Not Attempt Resuscitation" (DNAR) and/or ~~a~~Allow ~~n~~Natural ~~d~~Death (~~and~~AND) designation, determined by the patient or, if the patient is incompetent, by the family, attending physicians, patient advocate, and/or Durable Medical Power of Attorney (DMPOA);
- encourages all osteopathic physicians to engage patients and their families in discussion and documentation of advance care planning regarding end of life decisions;
- will work to implement policies to ensure **ACCESS TO** hospice and palliative services for all individuals, including the developmentally challenged, children, and other special populations **REGARDLESS OF INSURANCE STATUS**;
- ~~and urges that~~ **ENCOURAGES** osteopathic physicians **TO** recognize the importance of cultural diversity in perspectives on death, suffering, bereavement and rituals at the end of life, and incorporate cultural assessment into their comprehensive evaluation of the patient and family; **AND**

- ~~the AOA~~ will work to identify sources of culturally appropriate information on advance directives, palliative care, and end of life ethical issues in populations served by osteopathic physicians.

AMERICAN OSTEOPATHIC ASSOCIATION END OF LIFE CARE WHITE PAPER

The osteopathic approach to care can be particularly beneficial at the end of life. Attending to the patient and family holistically is a key principle of osteopathic medicine. Osteopathic palliative care improves the quality of life of patients and their families facing serious illness, through prevention and relief of physical, psychosocial and spiritual suffering. Osteopathic palliative care utilizes many modalities of treatment including osteopathic manipulative medicine.

End of life decisions should be the result of the collaboration and mutual informing of the patient, the patient's **SELF-DEFINED** family and health care professionals, each sharing his or her own expertise to help the patient make the best possible decision.

Adults with decision-making capacity should be informed of their choices and that they have the legal and ethical right to make their own decisions about their end of life care, including the right to receive or refuse recommended life-sustaining or life-prolonging medical treatment. This position honors the patient's autonomy and liberty as guaranteed in the United States Constitution and the Patient Self-Determination Act. This right exists even when the physician disagrees with the patient's decisions.

Patients without decision-making capacity have the right to assurance that their previously executed instructive advance directives, such as living wills, proxy directives (Durable Medical Power of Attorney -DMPOA) and Physician Orders for Life Sustaining Treatment (POLST) will be honored to guide others in delivering their health care. It should be noted that the term "physician" may also mean "medical" in this context. Advance directives delineate treatment options selected by an individual and enable decisions to be made by reviewing these documented wishes. The principle of "substituted judgment" allows for a proxy to speak for an individual who is unable to do so, based upon close personal knowledge of the incapacitated person. The principle of "best interests" (what the reasonable and informed patient would select) is invoked if the individual's wishes are not known. The over-riding issue is not what the family or friends want for the patient at end of life, but rather what would the patient want for himself or herself. If the patient were to awaken and be able to fully understand the circumstances, what decisions would the patient make? If the answer is clear, it is unethical, except in extraordinary circumstances, not to follow the patient's wishes.

Creating **advance directives** (living wills or designating a Durable Medical Power of Attorney) is to be encouraged IN advance of a life threatening situation with the assistance of trusted professionals. Persons holding the DMPOA/legally designated proxy should make decisions in accordance with the patient's previously expressed preferences. Living wills document the desired treatments but leave much room for interpretation when the situation doesn't match the directives, so a combination may be best. If no DMPOA/legally designated proxy has been selected and there is no state approved surrogate available and the patient has not executed an advanced directive or expressed preferences for care at end of life, then decisions should be made based on the principle of "best interests".

When there is disagreement, confusion or a request for another opinion, the use of an ethics committee is to be encouraged. Quality of life should be viewed from the patient's perspective in all these decisions because quality of life can only be self-determined. Extreme caution must be exercised when trying to determine what constitutes quality of life for another person as research has shown that patients consistently assess their quality of life to be better than their caregivers **BELIEVE.** ~~think the patients do.~~ Unfortunately, no documentation or proxy designation can definitively prevent or curtail disagreements between family members.

Palliative care is always appropriate when patients and families are facing a life threatening illness. The osteopathic physician understands that physical suffering from pain; dyspnea and other end of life symptoms can be relieved with good osteopathic medical management. The patient may also need psychosocial and spiritual assistance to address suffering in those domains as well. Hospice and palliative care services provide invaluable benefits to families and patients. The earliest possible involvement of hospice in the end of life care of patients should be encouraged.

The existence of a medical technology does not mandate its use. A physician is not required to provide **futile medical care** though it may be difficult to determine that a requested treatment is actually futile. A life-prolonging treatment may allow a terminally ill patient to achieve an important life goal such as seeing a grandchild, but in other cases aggressive therapies serve only to prolong suffering and expense associated with the dying process. The physician should employ full disclosure and compassionate honesty in discussing a treatment's likely benefits and burdens. If agreement cannot be reached, a consultation with an ethics committee is appropriate. If an ethics committee is not available, it may be necessary to seek the assistance of a court-appointed guardian. When a patient and physician cannot align their goals and treatment approaches, a congenial transfer of care may be necessary. Patient abandonment is unethical.

Withholding or withdrawing life sustaining treatments are considered morally, legally, and ethically identical because the end results are the same. When the benefit of a treatment is uncertain a time-limited trial is frequently advisable to help clarify prognosis. Offering treatment and then withdrawing it if it proves to be ineffective or burdensome is preferable to not offering the treatment at all.

Artificial nutrition and hydration may actually prolong the dying process. The use of artificial nutrition and hydration involves invasive medical procedures with potential side effects and complications. A decision to not provide or to discontinue this intervention may pose significant challenges to professional caregivers as well as to families. Physicians need to assist patients and families to understand the role of artificial nutrition and hydration at the end of life. Research has shown that dying patients do not experience hunger or thirst.

"Do Not Resuscitate/DNR" status is appropriate for patients who are dying from a primary illness or injury, or for whom cardiopulmonary resuscitation (CPR) would not be effective or for whom the burden of treatment outweighs the benefit. It is important to ensure that patients with DNR status receive all comfort care and appropriate treatments. A DNR status does not preclude treatment of correctable conditions. ~~CPR efforts that involve a deliberate decision not to attempt aggressively to bring a patient back to life are~~

~~not appropriate and a clear ethical violation~~. ~~**DELIBERATELY PERFORMING INEFFECTIVE CPR ("SLOW CODE") IS UNETHICAL.**~~

"PHYSICIAN ASSISTED SUICIDE" IS GENERALLY DEFINED AS A PATIENT OBTAINING THE ASSISTANCE OF A PHYSICIAN TO SECURE THE MEANS TO CAUSE ~~HIS/HER~~ THEIR OWN DEATH. PHYSICIAN ASSISTED SUICIDE IS LEGAL ONLY AS DETERMINED BY SPECIFIC STATE LAW.

IN THE DEFINITION OF EUTHANASIA, SOMEONE OTHER THAN THE PATIENT ADMINISTERS THE LIFE-ENDING DRUG. EUTHANASIA IS ILLEGAL IN ALL STATES.

WHILE THERE ARE EUPHEMISMS FOR THE TERM PHYSICIAN ASSISTED SUICIDE (PAS), THE DEFINITION OF THIS PRACTICE MAKES IT VERY CLEAR THAT THE PATIENT IS DYING BY SUICIDE AND THE PHYSICIAN HAS ASSISTED BY PROVIDING THE MEANS/MEDICATION PRESCRIPTION.

A FURTHER COMPLICATION OF EMPLOYING PHYSICIAN-ASSISTED SUICIDE IS THAT THE REQUIRED SELF-ADMINISTRATION BY THE PATIENT IS UNAVAILABLE TO THE PARALYZED, THOSE WITH ALS, THOSE WHO CAN'T SWALLOW, AND THOSE WITH GI CANCERS WHICH PREVENT ABSORPTION OF ORAL MEDICATION.

The request for physician-assisted suicide is frequently a call for help. Individuals may request physician-assisted suicide for reasons other than pain, e.g., inability to cope, fear of being a burden, or lack of control. T**HE "OREGON DEATH WITH DIGNITY ACT – 2022 DATA SUMMARY" IS A REPORT OF THE 25 YEARS OF DATA GENERATED FROM IMPLEMENTATION OF THIS LAW IN THE FIRST STATE TO ENACT SUCH A LAW. THE REASONS IDENTIFIED BY PATIENTS WHO DID DIE BY SUICIDE UNDER THIS LAW ARE LISTED IN A TABLE ON PAGE 14 OF THIS DOCUMENT.[1] AS SHOWN IN THE TABLE, OVER THE 25 YEARS OF THE IMPLEMENTATION OF THIS LAW, 28% OF THE CONCERNS PROMPTING INGESTION OF LIFE-ENDING MEDICATION WERE DUE TO "INADEQUATE PAIN CONTROL OR CONCERN ABOUT IT." THE CONCERNS AT THE TOP OF THE LIST, AT 90% EACH, WERE "LESS ABLE TO ENGAGE IN ACTIVITIES MAKING LIFE ENJOYABLE," AND "LOSING AUTONOMY."[1] OTHER CONCERNS INCLUDED "LOSS OF DIGNITY" (71%), "BURDEN ON FAMILY, FRIENDS/CAREGIVERS" (48%), "LOSING CONTROL OF BODILY FUNCTIONS" (44%), AND "FINANCIAL IMPLICATIONS OF TREATMENT" (5%)**.[1]

The alternative to physician-assisted suicide is HAVING physicians who are committed to providing excellence in end of life care and continuing to attend their dying patients. Community resources such as hospice programs should be made available to all patients. ~~Hospice and palliative care principles do not support physician assisted suicide and euthanasia remains an illegal practice.~~

ADDITIONAL SPECIFIC ALTERNATIVES TO PHYSICIAN-ASSISTED SUICIDE IN DEALING WITH ISSUES AT END OF LIFE INCLUDE, VOLUNTARILY STOPPING EATING AND DRINKING (VSED), STOPPING LIFE-SUSTAINING THERAPIES, PROPORTIONAL PALLIATIVE SEDATION, AND PALLIATIVE SEDATION TO

UNCONSCIOUSNESS.[2]

WHETHER OR NOT PHYSICIANS SHOULD CHOOSE TO SUPPORT AND THEN PARTICIPATE IN THE PRACTICE OF PHYSICIAN-ASSISTED SUICIDE IS CONTROVERSIAL. IT IS ALSO A PERSONAL DECISION, REFLECTING THE MORAL CONSCIENCE AND BELIEFS OF EACH PHYSICIAN. ~~EVERY~~ THE LAW IN EVERY STATE RECOGNIZES THE PERSONAL NATURE OF THIS DECISION FOR EVERY PHYSICIAN AND SPECIFICALLY DOES NOT REQUIRE ANY PHYSICIAN TO ADVOCATE FOR OR PARTICIPATE IN THIS PRACTICE.

SOME ORGANIZATIONS HAVE TAKEN AN OFFICIAL POSITION ON THIS ISSUE. PHYSICIAN-ASSISTED SUICIDE IS OPPOSED BY THE AMERICAN MEDICAL ASSOCIATION[3], THE AMERICAN COLLEGE OF PHYSICIANS[4] AND THE NATIONAL HOSPICE AND PALLIATIVE CARE ORGANIZATION[5], THE LARGEST SUCH MEMBER ORGANIZATION DEALING EXCLUSIVELY WITH END-OF-LIFE ISSUES. THE AMERICAN ASSOCIATION OF FAMILY PHYSICIANS[6] HAS TAKEN A POSITION OF "ENGAGED NEUTRALITY." THE AMERICAN ACADEMY OF HOSPICE AND PALLIATIVE MEDICINE (AAHPM) HAS TAKEN A POSITION OF "STUDIED NEUTRALITY." [7] THE AAHPM STATEMENT GOES ON TO ADD "HOWEVER AS A MATTER OF SOCIAL POLICY, THE ACADEMY HAS CONCERNS ABOUT A SHIFT TO INCLUDE PHYSICIAN-ASSISTED DYING IN ROUTINE MEDICAL PRACTICE, INCLUDING PALLIATIVE CARE. SUCH A CHANGE RISKS UNINTENDED LONG-RANGE CONSEQUENCES THAT MAY NOT YET BE DISCERNABLE, INCLUDING EFFECTS ON THE RELATIONSHIP BETWEEN MEDICINE AND SOCIETY, THE PATIENT AND PHYSICIAN, AND THE PERCEIVED OR ACTUAL INTEGRITY OF THE MEDICAL PROFESSION." (NOTA~~E~~ BENE: THE ACADEMY USES THE TERM 'PHYSICIAN-ASSISTED DYING')

Legal involvement to resolve end of life conflicts is sometimes inevitable, but is usually not the approach of choice. Legislative "remedies" including single-person and single-situation laws are also inappropriate. By far, the best approach to prevention/resolution of conflict is by documented advanced planning, good communication, and the assistance of an ethics committee. Collection of "clear and convincing evidence" of the patient wishes as cited in a US Supreme Court decision, as well as the principles of "substituted judgment" and "best interests" discussed above apply to the decision-making process.

Families of patients living with a terminal illness also have needs: the need to understand the dying process, the need to have cultural and religious differences understood and respected, the need to process grief. The osteopathic physician understands the important contribution of the family to the patient's overall wellbeing and includes the family in the palliative plan of care.

Patients living with a life threatening illness as well as those who are terminally ill have a right to **relief of pain** as well as relief of other physical symptoms. Fear of regulatory scrutiny should never be a deterrent to the prescription of adequate doses of analgesic medications. State licensing boards of medicine and pharmacy should provide assurance to physicians that this care is appropriate and protected under the law. Osteopathic colleges and graduate medical education programs are encouraged to review curricula in

order that adequate education in osteopathic pain management is provided to osteopathic trainees at all levels of their education. Physicians in practice will want to avail themselves of educational opportunities ~~such as Osteopathic-EPEC~~ to stay current in pain management and other aspects of end of life care. Osteopathic physicians should always assure their patients that they will provide safe and comfortable dying. Alternatively, patients may elect to suffer significant pain so that they remain alert and engaged until death. In every circumstance, patient autonomy for decision-making must be upheld.

At the end of life, the goal is comfort for the patient and psychosocial support of the family. Osteopathic physicians, through their holistic approach, are well suited to provide quality end of life care. DOs are in a unique position to provide important leadership in enhancing end of life care in the United States. There is no finer gift that osteopathic physicians can give than to provide excellent care through all phases of life and no one is better suited to the task.

Nota bene: In an area as sensitive as end of life, no white paper can address all scenarios and permutations. It should be understood that this white paper presents general guidelines, and osteopathic physicians will always tailor appropriate management to the needs of their individual patients and families.

WHEREAS, the Bureau of Osteopathic Research and Public Health has reviewed the policy; and

WHEREAS, the Bureau of Osteopathic Research and Public Health has provided amendments to provide clarity and updates to the policy, now therefore be it

RESOLVED, that the Bureau of Osteopathic Research and Public Health recommends that the following policy be REAFFIRMED AS AMENDED.

~~The American Osteopathic Association (AOA) encourages dissemination of research related to pediatric obesity and continuing medical education (CME) activities; encourages primary care physicians to teach and use body mass index (BMI) measurements; and encourages physicians providing health care to children to~~

~~1. Monitor their patients for excessive weight gain;~~

~~2. Discuss the possible long and short term consequences of excessive weight gain (E.G. cardiovascular and respiratory problems) with patients and their parents and institute a treatment plan or a referral as appropriate;~~

~~3. Advise patients to engage in moderate, physical activity daily, limit television, computer and video games, and spend family time together in physical activities; and~~

~~4. Advise parents to eat together as a family, set goals for the appropriate number of fruits and vegetables per day, serve portion sizes that are right for a child's age, limit snacking on empty calorie foods, and serve as role models for eating healthy foods. 2008.~~

THE AOA ENCOURAGES~~SUPPORTS~~:

1. **DISSEMINATION OF RESEARCH RELATED TO PEDIATRIC OBESITY;**

2. **CONTINUING MEDICAL EDUCATION (CME) ACTIVITIES ADDRESSING PEDIATRIC OBESITY; AND**

3. **~~THE USE OF BODY MASS INDEX (BMI) MEASUREMENTS FOR CHILDREN.~~ THE USE OF EVIDENCE-BASED GUIDELINES CONCURRENT WITH CURRENT RECOMMENDATIONS.**

~~**THE AOA ENCOURAGES PHYSICANS WHO PROVIDE HEALTH CARE TO CHILDREN TO:**~~

1. ~~**MONITOR THEIR PATIENTS FOR EXCESSIVE WEIGHT GAIN;**~~

2. ~~**DISCUSS POSSIBLE LONG AND SHORT-TERM CONSEQUENCES OF EXCESSIVE WEIGHT GAIN (E.G., CARDIOVASCULAR AND RESPIRATORY PROBLEMS WITH PATIENTS AND PARENTS, AND INSTITUTE A TREATMENT PLAN OR REFERRAL AS APPROPRIATE;**~~

3. ~~**ADVISE PATIENTS TO ENGAGE IN MODERATE, PHYSICAL ACTIVITY DAILY, LIMIT TELEVISION, COMPUTER AND VIDEO GAMES, AND SPEND FAMILY TIME TOGETHER IN PHYSICAL ACTIVITIES; AND**~~

4. ~~**ADVISE PARENTS TO EAT TOGETHER AS A FAMILY, SET GOALS FOR THE APPROPRIATE NUMBER OF FRUIT AND VEGETABLES PER DAY, SERVE PORTION SIZES THAT ARE RIGHT FOR A CHILD'S AGE, LIMIT SNACKING ON EMPTY CALORIE FOODS, AND SERVE AS ROLE MODELS FOR EATING HEALTHY FOODS.**~~

THE AOA ENCOURAGES PHYSICIANS WHO PROVIDE HEALTHCARE TO CHILDREN AND ADOLESCENTS TO PROVIDE CARE AND CLINICAL RECOMMENDATIONS TO THE PATIENT AND/OR PARENT OR GUARDIAN IN ALIGNMENT WITH CURRENT EVIDENCE-BASED GUIDELINES AND/OR PRACTICES.

SUBJECT: ARTIFICIAL INTELLIGENCE IN HEALTHCARE~~— TASK FORCE~~

SUBMITTED BY: Missouri Association of Osteopathic Physicians and Surgeons

REFERRED TO: Committee on Public Affairs

WHEREAS, the use of artificial intelligence (AI) in healthcare is increasing at an unprecedented pace, with the potential to transform healthcare delivery, improve patient outcomes, and reduce healthcare costs; and

WHEREAS, the ethical, legal, and social implications of AI in healthcare are complex and multifaceted, with issues including but not limited to data privacy, bias, and the impact on healthcare professionals; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) ~~forms a task force to~~ stud~~y~~IES the impact of AI in healthcare, including but not limited to:

1. The potential benefits and risks of AI in healthcare for patients, healthcare professionals, and healthcare organizations.
2. The ethical, legal, and social implications of AI in healthcare, including issues related to data privacy, bias, and transparency.
3. The impact of AI on the roles and responsibilities of healthcare professionals and the potential need for new training and education.
4. The potential impact of AI on healthcare costs and the healthcare system as a whole.
5. The potential impact of AI on the practice of osteopathic medicine; and, be it further

~~RESOLVED, that the task force include members with expertise in AI, medical ethics, and medical law~~.

RESOLVED, THAT AOA WILL PROVIDE A REPORT AND ACTION PLAN TO THE HOUSE OF DELEGATES AT ITS MEETING IN 2024.

Background Information: Provided by AOA Staff

Current AOA Policy: None

AOA does not currently have policy on AI, and this would be helpful in supporting AOA engagement in this space. AOA previously had a Health IT workgroup that engaged on this issue but has been inactive since early 2021. If this is adopted, we will need to identify a way to ensure we have the appropriate staff resources to manage this workstream.

Prior HOD action on similar or same topic: None

FISCAL IMPACT: $125,000 Annual Expense
The fiscal impact is contributed to the formation of a task force, assuming the task force would meet in-person as well as expense for the appropriate staffing to manage the workstream.

ACTION TAKEN: __Adopted as Amended_

DATE: ___July 22, 2023_____

SUBJECT: RECOGNIZING THE ISSUE OF WEIGHT BIAS IN HEALTHCARE

SUBMITTED BY: Osteopathic Physicians and Surgeons of California

REFERRED TO: Committee on Public Affairs

WHEREAS, approximately 1 in 3 adults (30.7%) have overweight and more than 2 in 5 adults (42.4%) have obesity[1]; and

WHEREAS, while there has been a push to recognize obesity as a disease, there is still a lack of recognition of the role that implicit weight bias plays in the care for individuals with overweight and obesity and

WHEREAS, providers with weight bias are less likely to provide thorough, patient-centered care to individuals with overweight or obesity[2]; and

WHEREAS, individuals with overweight and obesity are less likely to use preventative health care services and are more likely to avoid treatment, due to perceived weight bias and negative experiences[3,4]; and

~~WHEREAS, the emphasis put on weight by physicians distracts from pertinent health issues that the patients came to be seen for, therefore affecting patient's health utilization[5]; and~~

WHEREAS, H429-A/21 states that the "American Osteopathic Association…will initiate a profession-wide program to provide leadership in addressing the American obesity epidemic"; now therefore be it

RESOLVED, that the American Osteopathic Association (AOA) recognizes that ~~disproportionate~~ bias suffered by individuals with overweight and **OBESE CONDITIONS** ~~obesity~~ in healthcare is a public health issue; and be it further

RESOLVED, THAT THE AOA SUPPORTS EQUITABLE AND AFFORDABLE INSURANCE COVERAGE FOR PROVEN TREATMENTS, INCLUDING THE USE OF PHARMACEUTICALS IN THE MANAGEMENT OF INDIVIDUALS WITH OVERWEIGHT AND OBESE CONDITIONS, AND BE IT FURTHER

RESOLVED, the AOA promote greater awareness and research regarding how to reduce the implicit and explicit bias in healthcare ~~is~~ needed to improve the treatment and management of individuals with **THE** ~~**DISEASES**~~ **CONDITIONS OF** overweight and obesity.

REFERRED TO: Committee on Public Affairs

WHEREAS, citizens from historically excluded backgrounds are impacted more by barriers to voting[1,2]; and

WHEREAS, individuals who experience voter suppression have disproportionately worse health outcomes, and these disparities largely affect people of color[2,3]; and

WHEREAS, the relationship between health and voter participation perpetuates inequities in health, social, and economic policy, further worsening health disparities[3]; and

WHEREAS, individuals who vote as a form of civic participation self-report a better state of health than those who do not vote or choose to abstain from voting[4]; now, therefore be it

RESOLVED, that the American Osteopathic Association (AOA) acknowledge voting as a social determinant of health and establish a relationship between voter participation and health outcomes.

DATE: ____July 22, 2023_____

SUBJECT: AMENDMENT TO H444-A/20 "ADOPTING AND PROMOTING NON-STIGMATIZING LANGUAGE FOR SUBSTANCE USE DISORDERS"

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, substance use disorder is recognized as a chronic medical condition by the American Society of Addiction Medicine[1]; and

~~WHEREAS, the word "relapse" has a negative connotation when used toward patients[2] and is not a term that is used to describe those with other chronic conditions who have a reemergence of their disease; and~~

WHEREAS, language used to describe conditions can change patient outcomes and alter physician-patient relationships[3]; now, therefore be it

RESOLVED, that policy H444-A/20 be amended to read: The American Osteopathic Association (AOA) commit to the use of clinically-accurate, non-stigmatizing, person-first language (**INCLUDING, BUT NOT LIMITED TO,** "substance use disorder," "recovery," "substance misuse," "positive or negative urine screen," "person with a substance use disorder," and "**RECURRENCE OF USE**") and discourage the use of stigmatizing terminology ~~(**SUCH AS**, "substance abuse," "substance abuser," "addict," "alcoholic," "clean/dirty," and "**RELAPSE**")~~ in future publications, resolutions, and educational materials both in print and online.

SUBJECT: SUPPORTING ACCESS TO ~~OVER-THE-COUNTER~~ ORAL CONTRACEPTIVE PILLS

SUBMITTED BY: Student Osteopathic Medical Association

REFERRED TO: Committee on Public Affairs

WHEREAS, access to safe, effective, and affordable contraceptives is necessary to maintain reproductive autonomy[1,2]; ~~and~~**NOW THEREFORE BE IT**

~~WHEREAS, currently oral contraceptive pills (OCPs) are available prescription only[1,3]; and~~

~~WHEREAS, organizations such as the American College of Obstetricians and Gynecologists (ACOG)[4], the American Academy of Family Physicians (AAFP)[5], and the American Medical Association (AMA)[6] support over-the-counter access to oral contraceptive pills; now, therefore be it~~

RESOLVED, that the American Osteopathic Association (AOA) stand in support of affordable ~~over-the-counter~~ access to oral contraceptive pills**.** ~~**CONSISTENT WITH FDA GUIDELINES** without an age restriction; and, be it further~~

~~RESOLVED, that the American Osteopathic Association (AOA) encourage the U.S. Food and Drug Administration to approve affordable over-the-counter access to oral contraceptive pills without an age restriction.~~
