AOA Resources to Address Health Disparities and Social Determinants of Health (SDOH)

The resources in this toolkit were developed by the AOA Bureau of Osteopathic Research and Public Health to assist osteopathic physicians in talking with their patients on SDOH.

Social Determinants of Health: Making a Difference in the Lives of Your Patients and Their Families

What are social determinants of health?

Social determinants of health (SDOH) are conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. Many of the SDOH significantly impact health including the mental health of patients and can have long term effects contributing to the increased prevalence of chronic disease. The National Academy of Medicine found that medical care only accounted for 10–20% of individual’s health outcomes, while SDOH are 80-90% of contributing factors.

Examples of SDOH include:

- **Health Care System**: health coverage; provider availability; provider linguistic and cultural competency; quality of care.
- **Economic Stability**: employment; income and expenses; debt.
- **Physical Environment**: housing; transportation; safety; parks and playgrounds; zip code geography.
- **Education**: literacy; language; early childhood education; higher education.
- **Food**: hunger; access to healthy options.
- **Community and Social Relationships**: social integration; social systems; community engagement; discrimination; stress.

Osteopathic Philosophy and SDOH?

As a trusted source of health information and guidance it is important that osteopathic physicians partner with patients and families to address their immediate and long-term needs including the risk and protective factors that affect their quality of life. It is essential to address problems as they are identified and work with the practice team to refer to community-based resources.

**Osteopathic physicians:**

- Focus on understanding the patient as a complete individual including body, mind, and spirit.
- Believe there is more to good health than the absence of pain or disease and provide a holistic and comprehensive approach to treating patients.
- Support each patient in achieving a high level of wellness by focusing on physical and behavioral health and the individual’s environment.
Steps to incorporating SDOH assessment and referral in your practice:

Below are key issues to consider with incorporating SDOH assessment and a referral system in your practice.

- Work with the practice team on adopting a “whole-person” approach.
- Educate staff on the importance of screening for and documenting patients’ SDOH needs.
- Identify SDOH assessment tools and resources appropriate for your practice.
- Collaborate with the practice team on developing an effective workflow system.
- Obtain training for the practice team on identifying SDOH risk and protective factors and effective referral to community resources.
- Document any SDOH needs by utilizing the established SDOH ICD-10 Z codes.

Making a Difference for Your Patients During Difficult Times

The COVID-19 pandemic has significantly changed the lives of families in the US and worldwide. Families are experiencing the social, economic, and health effects of the pandemic. Stressors including poverty and food insecurity, loss of employment, isolation, changes in child care and school systems, risk of infection, complications following infection and loss of family members due to the pandemic will continue to have long-term effects on your patients and their families.

The immediate and long-term impacts of the pandemic have not been evenly distributed and stressors increased for individuals already struggling with low-wage work and meeting their family needs from paycheck to paycheck. The pandemic also disproportionately affected racial and ethnic minority groups considering the inequities in the rate of poverty, health care access, and other socioeconomic factors. These stressors can contribute to a toxic environment and can lead to mental health problems, family violence, and substance use, further affecting quality of life.

Osteopathic physicians partnering with families on their immediate and long-term needs during these difficult times is crucial. As a trusted health care provider, you can make a difference more than ever in the lives of your patients and their families.

Patient Assessment of Individual, Family and Community Needs

These questions are to assist the physician in understanding better what might be affecting your health and well-being. Obtaining this information will help us to work together with you to develop a plan that fits your life. We also may be able to assist you with connecting to resources in the community. Some of these questions may be sensitive, the information you provide is confidential and used to partner with you on your overall health and well-being.

Please circle your answer:

1. What is your current employment status?:
   - Retired
   - Disabled
   - Not Employed
   - Employed Part Time
   - Employed Full Time

2. Do you ever eat less than you feel you should because there was not enough money for food? Yes No

3. Do you sometimes need to see a doctor, but are not able to because of cost? Yes No

4. Have you ever had to go without health care because you did not have a way to get there? Yes No

5. Are you able to afford your medications? Yes No

6. Do you ever need help reading medical materials? Yes No

7. Do you have stable housing? Yes No

8. Are you often worried about having enough money for your bills (gas, electric, water)? Yes No

9. Do you feel safe at home? Yes No

10. Is there something that you would like to share with the physician that is cultural or spiritual in nature? Yes No

11. Does your spirituality impact the health decisions you make? Yes No

12. Are you concerned about discrimination today based on your sexual orientation, race, or ethnicity? Yes No

13. If you have children, do problems getting child care make it difficult to work or study? Yes No

14. Do you often feel sad and depressed? Yes No

Please include anything you would like to discuss with the physician today: _______________________

Thank you for completing these questions, your overall health is important to us!
**Coding for Social Determinants of Health Services**

In January 2021, several changes were made to the descriptions of the outpatient Evaluation and Management (E&M) codes. Level of service can now be determined by either total time spent on patient care on the calendar day of service, or by the level of Medical Decision Making (MDM). Diagnosis or treatment limited by Social Determinants of Health (SDOH) is an element in either the Moderate (99204 / 99214) or the High (99205 / 99215) levels of MDM.

Documentation of SDOH elements in the medical record increase the correct level of coding and should be considered carefully. The Z-codes are not presently included in many electronic medical record systems for explicit entry, but the appropriate documentation should be entered in the chart and the level of billing adjusted accordingly.

**Examples of patient experiences related to SDOH:**

- Patient returns to the office today having missed the last two scheduled appointments due to difficulties with transportation. Patient has been out of medications for several weeks and has presented to a local Emergency Department at least once for associated symptoms.

- Patient has recently been evaluated by Orthopedics for bilateral knee pain. Found with severe tricompartmental degenerative disease and total knee replacements were advised. Scheduling of this is delayed due to patient’s morbid obesity and continued daily tobacco use.

- Patient was prescribed additional antihypertensive agents on last visit, however, was unable to afford them and has continued taking prior medications. Blood pressure has been very high when checked at the local fire station.
Established SDOH ICD-10 Z codes:

Use of these codes can potentially increase payment to the practice for patient care.

<thead>
<tr>
<th>ICD-10-CM Code Category</th>
<th>Problems/Risk Factors Included in Category</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Z55 – Problems related to education and literacy</strong></td>
<td>Illiteracy/low-level, schooling availability, failing school, underachievement, discord with teachers.</td>
</tr>
<tr>
<td><strong>Z56 – Problems related to employment/unemployment</strong></td>
<td>Changing of job, losing job, no job, stressful work schedule, discord with boss/co-workers, bad working conditions.</td>
</tr>
<tr>
<td><strong>Z57 – Occupational exposure to risk factors</strong></td>
<td>Noise, radiation, dust, other air contaminants, tobacco, toxic agents in industry, extreme temperatures, vibration, others.</td>
</tr>
<tr>
<td><strong>Z59 – Problems related to housing and economic circumstances</strong></td>
<td>Homeless, inadequate housing, discord with neighbors/landlord, problems with residential living, lack of adequate food/safe drinking water, extreme poverty, low income, insufficient social insurance/welfare support.</td>
</tr>
<tr>
<td><strong>Z60 – Problems related to social environment</strong></td>
<td>Adjustment to life-cycle transitions, living alone, cultural differences, social exclusion and rejection, discrimination/persecution.</td>
</tr>
<tr>
<td><strong>Z62 – Problems related to upbringing</strong></td>
<td>Inadequate parental supervision/control, parental overprotection, upbringing away from parents, child in custody, institutional upbringing (orphan or group home), hostility towards child, inappropriate/excessive parental pressure, child abuse including history of (physical and/or sexual), neglect, forced labor, child-parent conflict.</td>
</tr>
<tr>
<td><strong>Z63 – Other problems related to primary support group, including family circumstances</strong></td>
<td>Spousal conflict, in-law conflict, absence of family member (death, divorce, deployment), dependent relative needing care, family alcoholism/drug addiction, isolated family.</td>
</tr>
<tr>
<td><strong>Z64 – Problems related to certain psychosocial circumstances</strong></td>
<td>Unwanted pregnancy, multiparity, discord with counselors.</td>
</tr>
<tr>
<td><strong>Z65 – Problems related to other psychosocial circumstances</strong></td>
<td>Civil/criminal convictions, incarceration, problems after release from prison, victim of crime, exposure to disaster/war, religious persecution.</td>
</tr>

USING SDOH Z CODES
Can Enhance Your Quality Improvement Initiatives

Health Care Administrators
Understand how SDOH data can be gathered and tracked using Z codes.
- Select an SDOH screening tool.
- Identify workflows that minimize staff burden.
- Provide training to support data collection.
- Invest in EHRs that facilitate data collection and coding.
- Decide what Z code data to use and monitor.

Develop a plan to use SDOH Z code data to:
- Enhance patient care.
- Improve care coordination and referrals.
- Support quality measurement.
- Identify community/population needs.
- Support planning and implementation of social needs interventions.
- Monitor SDOH intervention effectiveness.

Health Care Team
Use a SDOH screening tool.
- Follow best practices for collecting SDOH data in a sensitive and HIPAA-compliant manner.
- Consistently document standardized SDOH data in the EHR.
- Refer individuals to social service organizations and appropriate support services through local, state, and national resources.

Coding Professionals
Follow the ICD-10-CM coding guidelines.3
- Use the CDC National Center for Health Statistics ICD-10-CM Browser tool to search for ICD-10-CM codes and information on code usage.4
- Coding team managers should review codes for consistency and quality.
- Assign all relevant SDOH Z codes to support quality improvement initiatives.

Z code Categories
- Z55 – Problems related to education and literacy
- Z56 – Problems related to employment and unemployment
- Z57 – Occupational exposure to risk factors
- Z59 – Problems related to housing and economic circumstances
- Z60 – Problems related to social environment
- Z62 – Problems related to upbringing
- Z63 – Other problems related to primary support group, including family circumstances
- Z64 – Problems related to certain psychosocial circumstances
- Z65 – Problems related to other psychosocial circumstances

This list is subject to revisions and additions to improve alignment with SDOH data elements.

Revision Date: February 2021

Social Determinants of Health (SDOH) Resources

Centers for Disease Control and Prevention – Social Determinants of Health (SDOH) Website

This website provides CDC resources for SDOH data, research, tools for action, programs, and policy. They may be used by people in public health, community organizations, research organizations, and health care systems to assess SDOH and improve community well-being. Information and tools available on this website were generated or funded by CDC within the last 10 years.

Social Determinants of Health: Know What Affects Health

Healthy People 2030 – SDOH

One of Healthy People 2030’s 5 overarching goals is specifically related to SDOH: “Create social, physical, and economic environments that promote attaining the full potential for health and well-being for all.” In line with this goal, Healthy People 2030 features many objectives related to SDOH. These objectives highlight the importance of “upstream” factors — usually unrelated to health care delivery — in improving health and reducing health disparities.

Social Determinants of Health - Healthy People 2030

Healthy People 2020- SDOH

The Social Determinants of Health topic area within Healthy People 2020 is designed to identify ways to create social and physical environments that promote good health for all. This website also shows Healthy People 2020 data on SDOH.
